Appendix D – Social media summary 235

Appendix E – Drop-in session verbatim feedback 236

Appendix F – Email submissions 241

Appendix G – Letter to residents 246

Engagement snapshot

The City of Marion consulted with its community from 14 July to 11 August 2023 to understand which of the following design options for a seaside pool and coastal protection is preferred for Hallett Cove beach.

Option 1 - 50m seaside pool and embankment protection
Option 2 - 25m seaside pool and embankment protection
Option 3 - Embankment protection only (no pool)

How we engaged

1,299 Making Marion surveys were completed. 56 people attended a drop-in session on Saturday 29 July 2023 at the Boatshed Café. Six people made email submissions. 195 likes and 353 comments were made on Facebook posts, with additional engagement reached on X (Twitter) and Instagram.

The consultation was promoted through a letter to nearby residents, door knocking nearby residents, beach signage, social media and Council's Making Marion engagement platform.

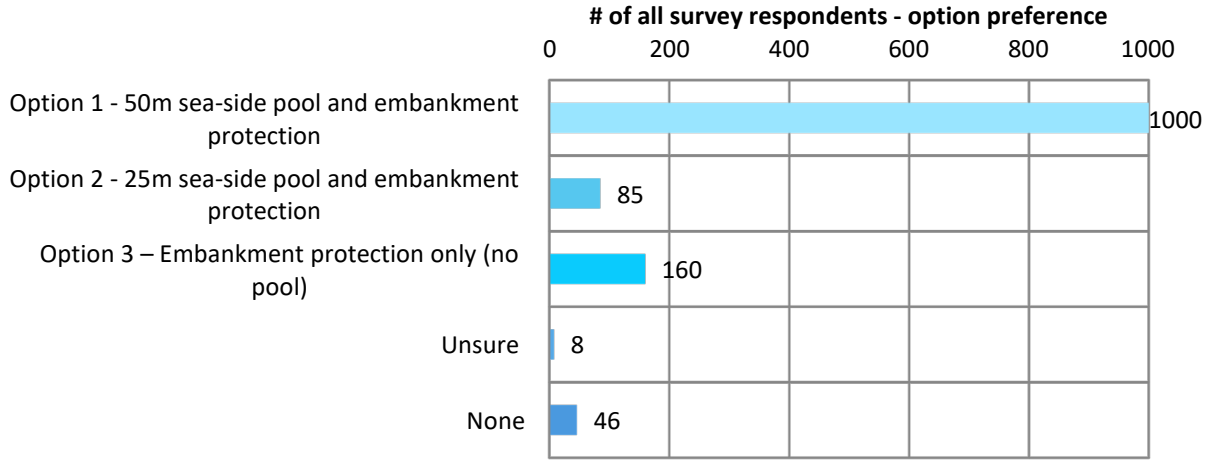

Is there community support for a seaside pool at Hallett Cove?

Most people participating in the consultation indicated their support for a seaside pool at Hallett Cove with the preference being for Option 1 – 50m seaside pool and embankment protection.

- 81% (1,050) of all survey respondents and 80% (45) of drop-in session attendees were supportive of Option 1 – a 50m seaside pool and embankment protection (either indicated that they support or strongly support this option).

What option do the community prefer?

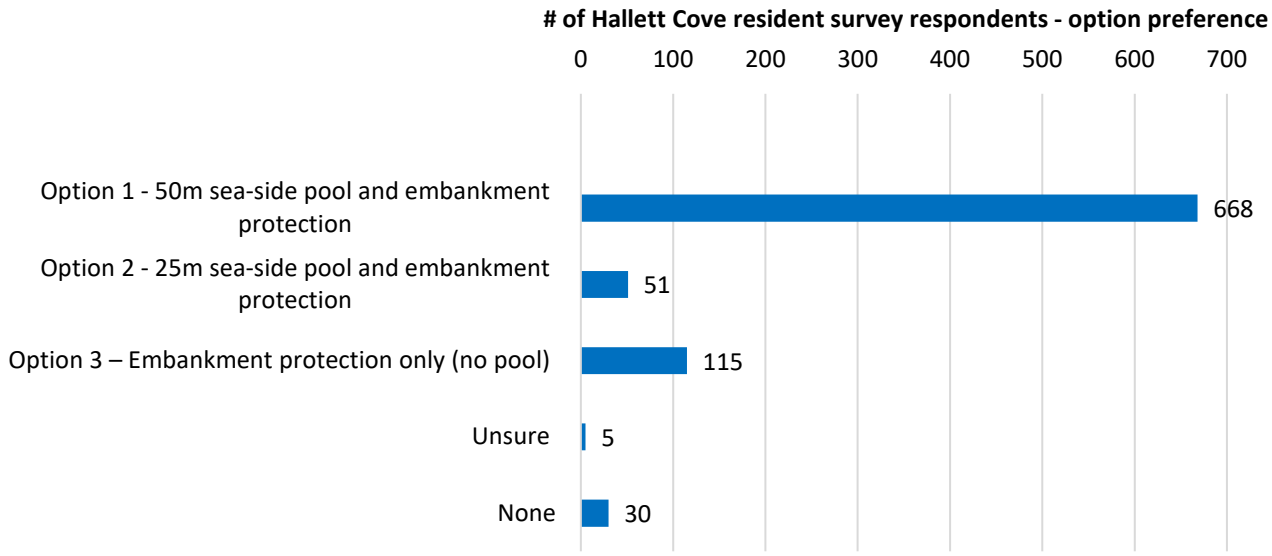

- 77% (1,000) of all survey respondents prefer Option 1 - 50m seaside pool and embankment protection.
- 7% (85) of all survey respondents prefer Option 2 - 25m seaside pool and embankment protection.
- 12% (160) of all survey respondents prefer Option 3 - embankment protection only (no seaside pool).
- 4% (46) of all survey respondents prefer none of the options.

What do Hallett Cove residents think?

869 (67%) survey respondents were from the suburb of Hallett Cove. Hallett Cove resident survey respondents had very similar preferences compared to all survey respondents.

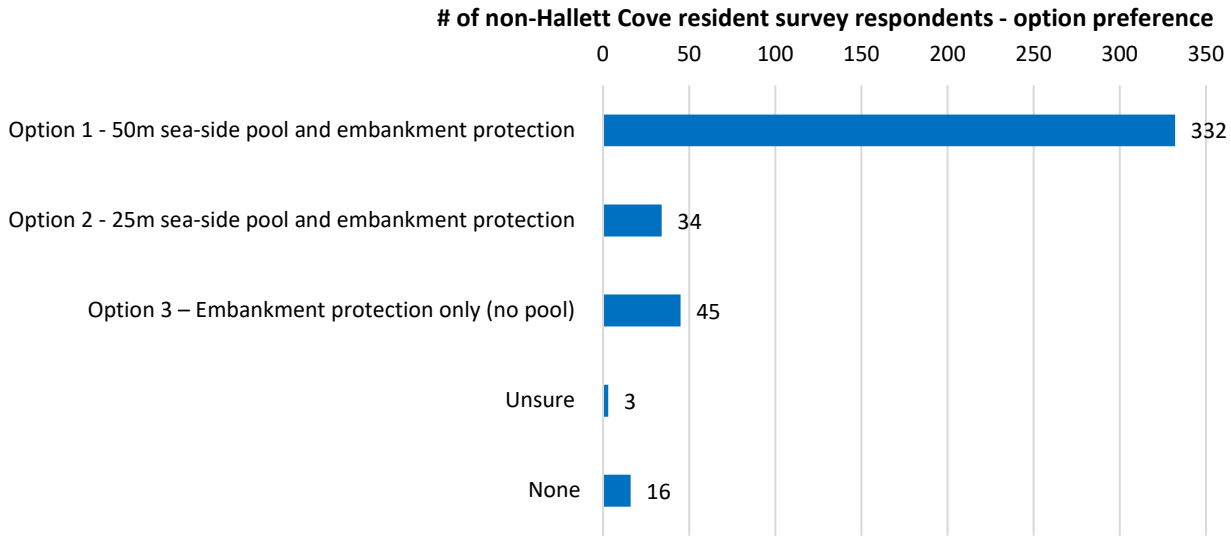

- 80% (696) of Hallett Cove residents were supportive of Option 1 – a 50m seaside pool and embankment protection (either indicated that they support or strongly support this option).
- 77% (668) of Hallett Cove residents prefer Option 1 - 50m seaside pool and embankment protection.
- 6% (51) of Hallett Cove residents prefer Option 2 - 25m seaside pool and embankment protection.
- 13% (115) of Hallett Cove residents prefer Option 3 - embankment protection only (no seaside pool).
- 3% (30) of Hallett Cove residents prefer none of the options.

What do community members who do not live in Hallett Cove think?

430 (33%) survey respondents were from outside the suburb of Hallett Cove. Respondents who did not live in Hallett Cove resident had very similar preferences compared to all survey respondents and Hallett Cove respondents.

- 82% (354) of non-Hallett Cove residents were supportive of Option 1 – a 50m seaside pool and embankment protection (either indicated that they support or strongly support this option).
- 77% (332) of non-Hallett Cove residents prefer Option 1 - 50m seaside pool and embankment protection.
- 8% (34) of non-Hallett Cove residents prefer Option 2 - 25m seaside pool and embankment protection.
- 10% (45) of non-Hallett Cove residents prefer Option 3 - embankment protection only (no seaside pool).
- 4% (16) of non-Hallett Cove residents prefer none of the options.

Key themes of feedback received across consultation activities

Themes of support:

- Preference for Option 1 - 50m seaside pool which allows more space for a variety of swimming activities
- Provision of a unique and fun place for recreation and exercise
- Local recreational, tourism and business benefits
- Family friendly offering for children and teenagers
- Aesthetic preferences for different options (some think 50m sits best in the landscape. Others feel the smaller 25m pool has less visual impact)
- Good level of accessibility to the pools
- Provision of a safe swimming option on a beach which is generally unsafe for swimming
- Cost-benefit ratios for each option (some think 50m is better value for money. Others prefer the lower cost of 25m)
- Embankment protection
- Health and wellbeing benefits
- Interaction with surrounding existing infrastructure and proposed new supportive infrastructure
- Activation of a currently underutilised area

Themes of concern:

- Parking and traffic impacts
- Impact on the environment (e.g. exacerbation of existing erosion issues, impact on marine life, and reduction of natural values)

- No need for a seaside pool at Hallett Cove
- Aesthetic impacts
- Cost implications (construction and maintenance)
- Impact on existing recreational activities (e.g. swimming, walking, kayaking, snorkelling, surfing)
- Need for additional supportive infrastructure (e.g. change rooms, toilets, showers, shaded areas, seating, pathways)
- Safety concerns (e.g. potential antisocial behaviour in the surrounding area, safety of swimmers)
- Noise impacts
- Ongoing maintenance requirements
- Impact of sea level rise
- Impacts on geological and cultural heritage values
- Challenges with managing tidal flows into the pool.

1. Why we engaged

The City of Marion prepared two design options for a seaside pool at Hallett Cove and engaged with the community to understand which is preferred if any. Both options also included features to protect the embankment between the beach and the foreshore from coastal erosion. A third design option was also prepared for consultation with the community which included just embankment protection and no pool.

1.1 Background

In 2018 a community campaign to build a 'sea pool' at Hallett Cove was initiated by a local resident and received high levels of support. In response, Council and the State Government partnered to undertake technical feasibility study for a sea pool.

The study found that a true 'sea pool' was not feasible due to coastline structure but that a 'seaside pool' above the waterline filled by seawater was. It also confirmed that Hallett Cove beach is vulnerable to coastal erosion and that a protective structure (e.g. sea wall) could be incorporated into a seaside pool.

In August 2022 Council consulted with the community to understand the level of support for a seaside pool at Hallett Cove. The results showed that the community was generally supportive. Some community members raised concerns about impacts on traffic, parking, the environment, visual amenity and costs. The consultation report can be viewed in the document list on this page.

At the end of the consultation, Council committed to prepare concept plans for a seaside pool.

1.2 Seaside pool design options

Council has now prepared three design options which seek to deliver positive outcomes whilst managing the impacts raised by community in the last consultation.

Option	Description
Option 1 50m seaside pool and embankment protection	A 50m seaside pool adjacent Heron Way Reserve including stepped concrete benches and beach access pathways that also provide embankment protection against coastal erosion. Includes a children's wading pool with a natural rock floor.
Option 2 25m seaside pool and embankment protection	A 25m seaside pool adjacent Heron Way Reserve including stepped concrete benches and beach access pathways that also provide embankment protection against coastal erosion. Includes a children's wading pool with a natural rock floor.
Option 3 Embankment protection only (no pool)	For the purposes of this consultation, concrete structure and beach access pathways adjacent to Heron Way have been used as an example of a solution that provides protection against coastal erosion. Other coastal management responses through this section will be considered as part of the "no pool" option which may include rock armouring, reinforcement and planting.

Council has made no commitment to develop a seaside pool at Hallett Cove. These options were developed as part of the seaside pool project. If Council decide to not proceed with a pool and to instead look at Option 3 - embankment protection only (no pool), further planning would be required to identify the best long-term response for managing the entire stretch of the embankment.

1.3 This report

This report presents information about how Council consulted with the community on the design options and the results of the consultation.

2. How we engaged

Consultation was undertaken on the three design options from 14 July to 11 August 2023 and included the following:

Activity	Description
Making Marion webpage	Provided information on the background to the project, how to provide feedback, and provided access to the proposed concept design options, FAQs and online survey
Online survey	An online survey was established on Making Marion for people to have their say on the three options. Survey questions are provided in Appendix B and verbatim feedback is provided in Appendix C
Drop-in session	A drop-in session was held between 3pm and 5pm on Saturday 29 July 2023 at the Boatshed Café in Hallett Cove. People could view the designs, ask questions of the project team and provide feedback on the design options
Letter to residents	A letter was dropped in the letter boxes of 5,480 properties in Hallett Cove. It presented the three proposed options and provided information on how to have a say (Appendix G)
Doorknocking	Approximately 1,180 most impacted local properties in Hallett Cove were also door knocked by the project team to maximise awareness of the consultation process and ensure that they were aware of how to provide their feedback
Signage	Signage was established at Hallett Cove Beach to make beach users aware of the consultation and how to have a say
Social media	The consultation was promoted through posts to Councils social media channels including Facebook, X (Twitter) and Instagram. A social media snapshot is provided in Appendix D
Making Marion	An email was sent to people registered to Council's consultation platform Making Marion and to other key stakeholders to make them aware of the consultation and how to have a say
Email submissions	Some people chose to provide an email submission (Appendix F)

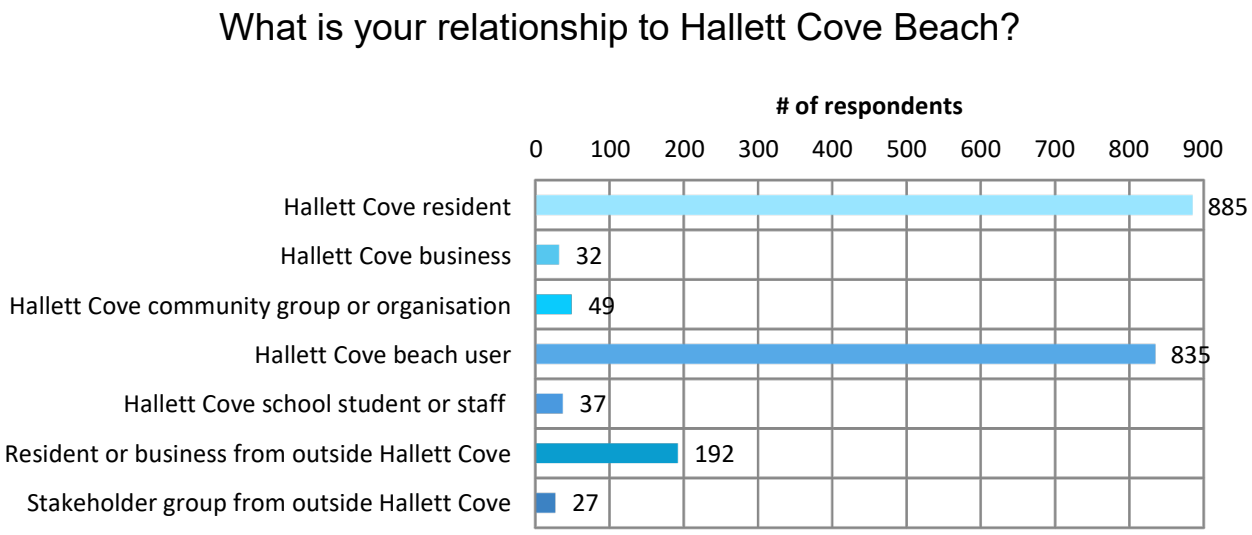

3. What we heard

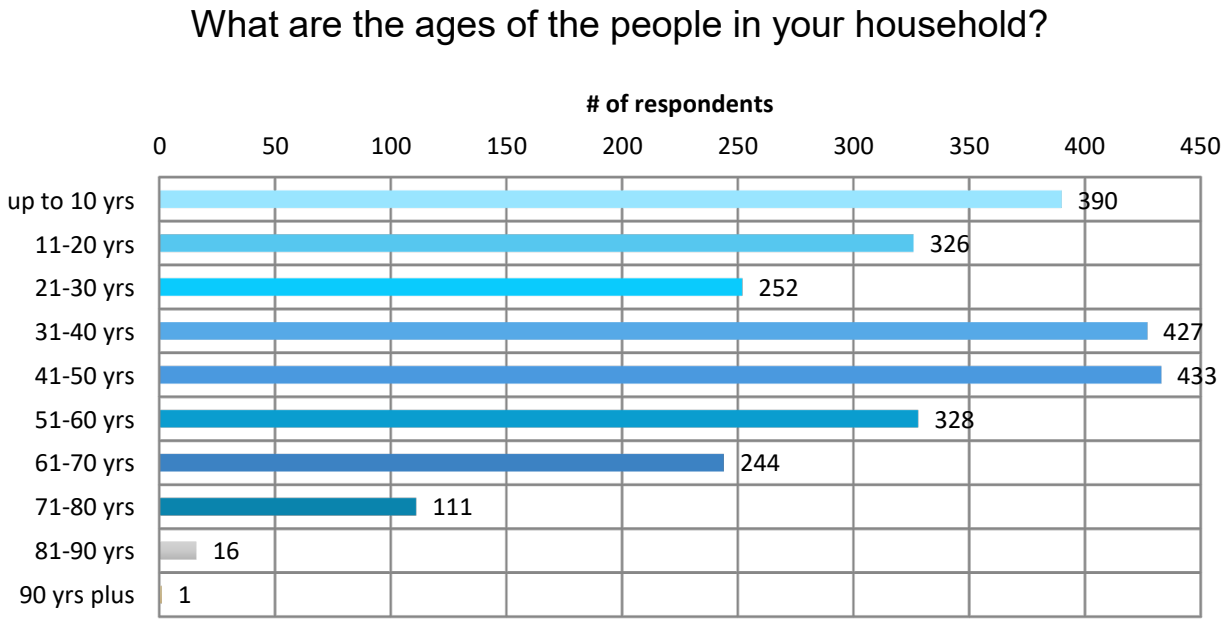

3.1 Online survey

1,299 people completed the online survey. Verbatim survey comments are provided in Appendix B.

Responses were received from people residing across the Adelaide metropolitan area. Most identified as Hallett Cove residents or Hallett Cove beach users. 67% (869) were from the suburb of Hallett Cove. The other suburbs representing more than 1% of responses were Sheidow Park (120, 9%), Trott Park (39, 3%) and Marino (36, 3%).

Members of respondent households represented a cross section of ages.

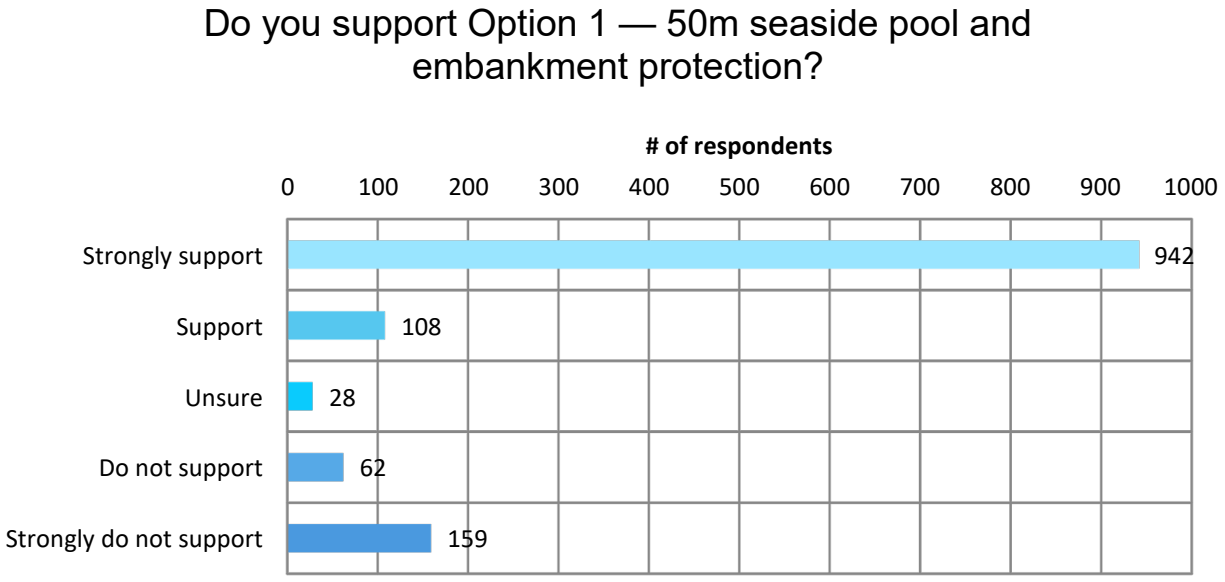

3.1.1 *Do you support Option 1 – 50m seaside pool and embankment protection?*

The vast majority of respondents, 81%, are supportive of Option 1 - 50m seaside pool and embankment protection (Option 1). 73% of respondents (942) strongly support it and another 8% (108) support it.

17% of respondents are not supportive of Option 1. 12% of respondents (159) strongly do not support it and 5% (62) do not support it.

2% of respondents (28) are unsure if they support Option 1.

Themes of survey comments on Option 1 (verbatim comments are provided In Appendix C)

What people like about Option 1:

- Larger size – some respondents liked that Option 1 allows for 50m lap swimming, allows ample space to use the pool for both fitness and recreation, would provide the ability to host competitions and events would be less crowded during peak times, and future-proofs the asset to allow for future growth - 'do it once and do it right'.
- Local benefits – some respondents identified that Option 1 would provide a range of benefits for the local area including a local pool for residents and a unique offering that would act as drawcard to Hallett Cove and support tourism and local businesses. It could increasing suburb value, build a greater sense of community, and increase use or enhance a part of the beach which is currently underutilised.
- Cost – some respondents felt that Option 1 provided better value for money, with a small increased cost for a larger pool compared to the cost of the 25m Option 2.
- Kids area/wading pool/space for families – some respondents liked that Option 1 provides pool options for all ages and abilities, with a great space for families and teenagers that promotes fun.

- Aesthetics – some respondents thought that Option 1 blends in well with the shoreline and surrounding environment, visually enhances the area, has a good orientation and location, and maintains the beauty of the natural area.
- Accessibility – some respondents liked that Option 1 had easy access including ramp access, access from the beach, and parking close-by, that it was a no/low cost entertainment option which enables access for all, and that it maintains space on the beach to walk around the pool to access the beach.
- Safe swimming option – some respondents were excited that Option 1 provides a safe place for swimming in an area where it is currently challenging to swim, enabling people who do not feel comfortable swimming in the open ocean to swim alongside the ocean.
- Embankment protection – some respondents liked that Option 1 provides coastal protection against erosion.
- Health and wellbeing benefits – some respondents thought that Option 1 would provide exercise opportunities to improve health and wellbeing. They identified that a 50m pool better allows for lap swimming and competitive training, that salt water is healthier than chlorine water, and that a larger pool is more hygienic than a smaller pool.
- Surrounding infrastructure – some respondents liked that Option 1 would be supported by a range of supporting and existing infrastructure in the area including benches, access paths, drinking water, toilets, parking and existing beach access infrastructure.

What concerns people about Option 1:

In considering these concerns, it should be remembered that 81% of respondents support Option 1. Some of these concerns were raised by people who do support a pool, suggesting that even those who support a pool would like some concerns to be addressed in future planning.

- Parking and traffic – some respondents were concerned about the impact Option 1 would have on local parking and traffic especially for local residents and their visitors. Respondents were also concerned about increased danger on the local roads, congestion, the need for more public transport options, and the lack of bike lanes.
- Size – some respondents were concerned that Option 1 is too big, that not all swimmers are able to swim 50m laps, that the pool takes up too much space and covers too much for the tidal areas, that the space wouldn't be fully used, and that the size may make watching children difficult. Others thought that Option 1 was still no big enough to cater to demand and would become crowded during peak times.
- Impact on the environment – some respondents were concerned that Option 1 would impact on the environment in a variety of ways including further exacerbating erosion and impacting sand replenishment, impacting on the uniqueness of the beach which adjoins a conservation park, impacting on the intertidal reef and rockpools, increasing litter and other user impacts on the marine environment, and damage to the environment during the construction and end-of-life phases.

- Aesthetics – some respondents were concerned about the aesthetic impacts of Option 1, expressing that it was ugly, had too much concrete, and disrupted the natural beauty of the environment for esplanade residents and beach goers.
- Costs – some respondents were concerned about the cost of Option 1, including high upfront and ongoing maintenance costs, the impact on ratepayers and taxpayers and the unknown maintenance costs. Some believed this money could be better spent elsewhere.
- General disapproval – some respondents made general comments that they do not support any type of swimming pool at Hallett Cove beach.
- Use – some respondents were concerned about the use of Option 1. Some respondents anticipate conflict between lap swimmers and recreational swimmers in use of the facility. Others are concerned that the increase in visitors will cause the area to be congested and filled with tourists, and that people will misuse the area with rubbish and lack of regard for the natural environment. Others believe that the facility will not be used in winter, or that the facility is not required as there are other pools and beach swimming options nearby.
- Supportive infrastructure – some respondents were concerned that the plans for Option 1 did not include consideration of supportive infrastructure including change rooms, toilet/shower facilities, seating and shade, and that there is a lack of food options nearby.
- Safety – some respondents were concerned about the safety implications of Option 1 including safety of swimmers, safety after hours and at night, the potential for damage/vandalism/antisocial behaviour/misuse of the area, safety of the amenities block, the need for a lifeguard, concern about contamination due to the nearby stormwater pipe, the lack of shade, and the lack of safety equipment e.g. defibrillators.
- Noise – some respondents were concerned about noise impacts including from pool pumps, pool users and traffic.
- Timing – some respondents were concerned about the amount of time spent already on consultation for this project, and that it will take a long time for a decision to be made and the facility to be built.
- Tidal fill – some respondents were concerned about the logistics of a tidal fill pool, including how to ensure that the tide will rise enough to keep it clean and functional while not being filled with debris after king tides/storm events. Others were concerned about the impact of sea level rise on the pool.
- Construction – some respondents were concerned about construction impacts including waste, impact on the environment, and general disruption for residents and beachgoers.
- Community – some respondents were concerned about a lack of community support for Option 1 from previous rounds of consultation and on an ongoing basis.
- Maintenance – some respondents were concerned about ongoing maintenance needs and costs of Option 1 and the potential for deterioration, including concerns about the larger area to maintain and concerns that the build will not be of a high quality and hence will fall into disrepair quickly.
- Funding – some respondents were concerned that the source of funding for Option 1 is still unknown.

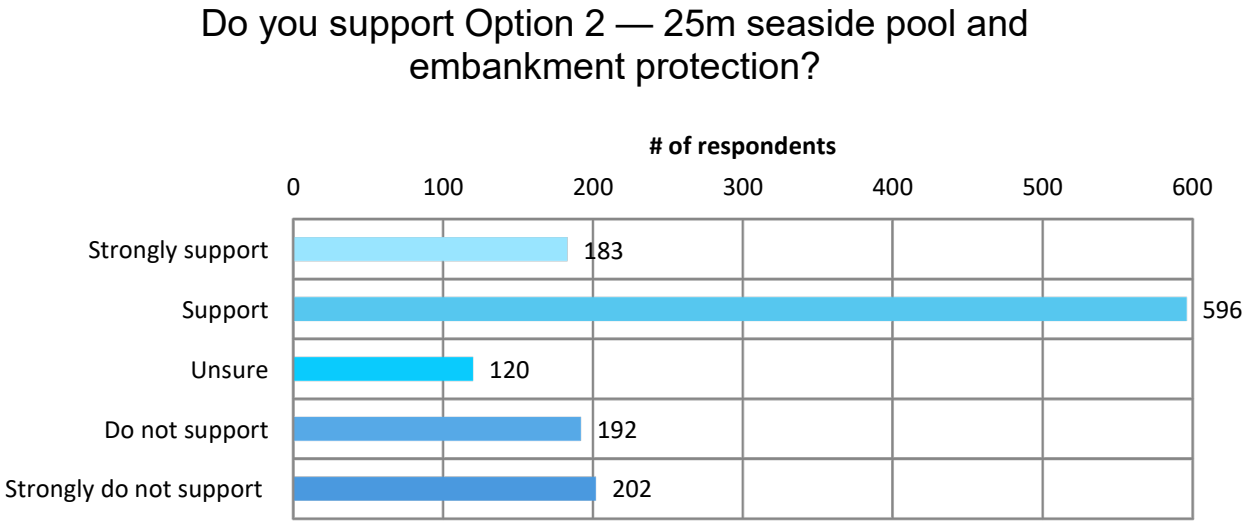

- **Geological and cultural significance** – some respondents were concerned that Option 1 would impact on the unique geological, cultural and heritage significance of the area.
- **Access** – some respondents are concerned that Option 1 may be difficult to access due to the surrounding rocks, and that emergency access may be difficult.
- **Surf break** – some respondents were concerned about the impact of Option 1 on the local surf break, including impact on local wave dynamics and the location of the pool blocking access to the water at the usual entry point.

3.1.2 *Do you support Option 2 – 25m seaside pool and embankment protection?*

60% of respondents are supportive of Option 2 - 25m seaside pool and embankment protection (Option 2). 14% of respondents (183) strongly support it and 46% (596) support it.

31% of respondents are not supportive of Option 2. 16% of respondents (202) strongly do not support it and 15% (192) do not support it.

9% of respondents (120) are unsure if they support Option 2.

Themes of survey comments on Option 2 (verbatim comments are provided in Appendix C)

What people like about Option 2:

- Prefer Option 1 – many respondents noted that they would prefer Option 1, but would rather have Option 2 than no pool, and that this may be a good compromise between those who support a seaside pool at Hallett Cove and those who don't.
- Smaller size – some respondents preferred the smaller size of Option 2, noting that this reduces visual and environmental impact including on the rock pools and rock habitat, reduces impact on the beach space, blends into the surrounding environment more, is a better size for recreational swimming and for the average swimmer to do laps, better caters to a range of swimming abilities and is easier to maintain.
- Aesthetics – some respondents preferred the aesthetics of Option 2, noting that its smaller size reduces visual impact, is more visually pleasing, and fits in better with the landscape.
- Cost – some respondents liked that Option 2 was a cheaper option both upfront and for ongoing maintenance costs than Option 1.
- Kids area/wading pool – some respondents through that Option 2 was a great option for families including young children and teenagers and would be a more manageable and safer size for children.

- Same benefits as Option 1 – many of the same benefits as Option 1 were identified for Option 2 including accessibility, embankment protection, local benefits, health and wellbeing benefits, supporting infrastructure and a safe swimming option.

What concerns people about Option 2:

All issues raised for Option 1 (excluding comments regarding the larger size) were also raised for option 2. Additional concerns raised for option 2 only included:

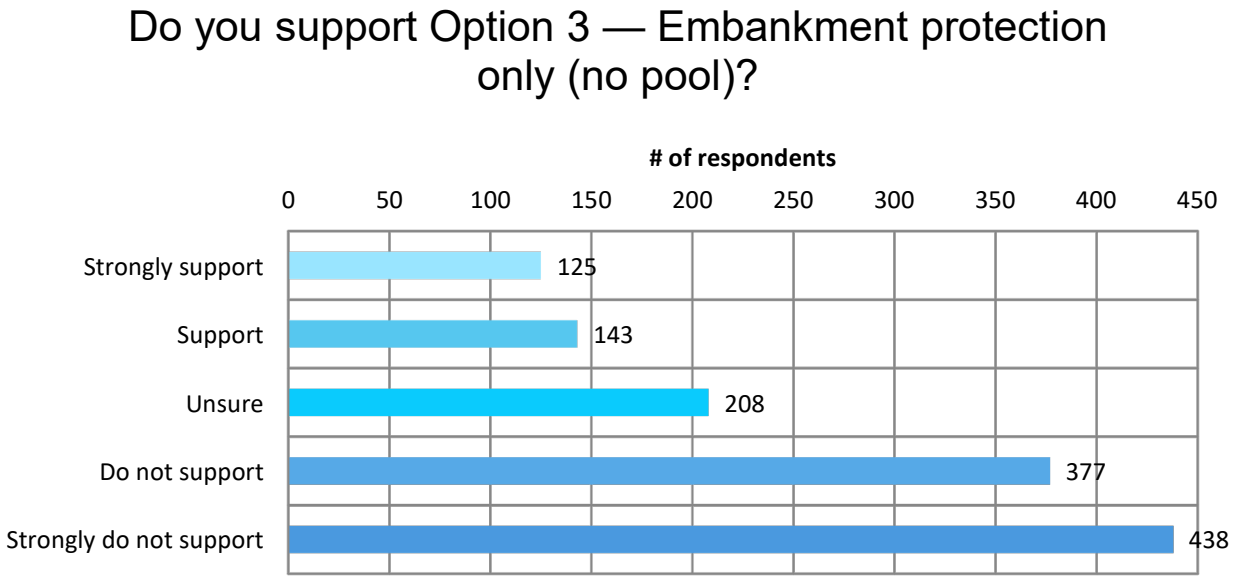

- Size – some respondents were concerned that Option 2 was not big enough, that the lane length was not long enough for lap swimming, that the pool would limit swimming options, that there would be less space to spread out and would experience overcrowding in peak times, that there would be more conflict between lap swimmers and recreational swimmers in the smaller space, that the design does not utilise space well, that the smaller pool would not be able to be used for swimming or competitive events, and that the pool wouldn't draw as many visitors as a larger pool.
- Aesthetics – some respondents felt that Option 2 did not fit in with the coastline as well as Option 1.
- Cost – some respondents were concerned that Option 2 was not as cost effective as Option 1, and that increased costs would be incurred if it had to be expanded in the future to make more space.

3.1.3 *Do you support Option 3 – Embankment only (no pool)?*

63% of respondents are not supportive of Option 3 - embankment protection only (no pool) (Option 3). 34% of respondents (438) strongly do not support it and 29% (377) do not support it.

21% of respondents are supportive of Option 3. 10% of respondents (125) strongly support it and 11% (143) support it.

16% (208) are unsure if they support Option 3.

Themes of survey comments on Option 3 (verbatim comments are provided in Appendix C)

What people like about Option 3:

- Environment – some respondents liked Option 3 because it assists in mitigating erosion and hence preserving the beach and sand dunes, causes less damage to the environment, keeps the beach in a more natural state with a smaller footprint, avoids drawing additional crowds with associated environmental impacts, and has less impacts on rock pools and marine life.
- Less local impacts – some respondents liked that Option 3 avoids many local issues raised for Option 1 and 2 including impacts on parking, traffic, amenity, crowds, noise and general disruption.
- Cost – some respondents liked that Option 3 incurs less costs than Option 1 and 2, with lower construction and maintenance costs and a better use of taxpayer/ratepayer money.
- Aesthetics – some respondents liked that Option 3 has less visual impact on the beach.
- Maintenance – some respondents liked Option 3 had lower ongoing maintenance requirements and avoids the potential for the pool to fall into disrepair.
- Geological and cultural significance – some respondents supported Option 3 because it had a lower impact on the unique geological, cultural and heritage significance of the area.

- Protection – some respondents liked that Option 3 will provide short term protection against sea level rise.

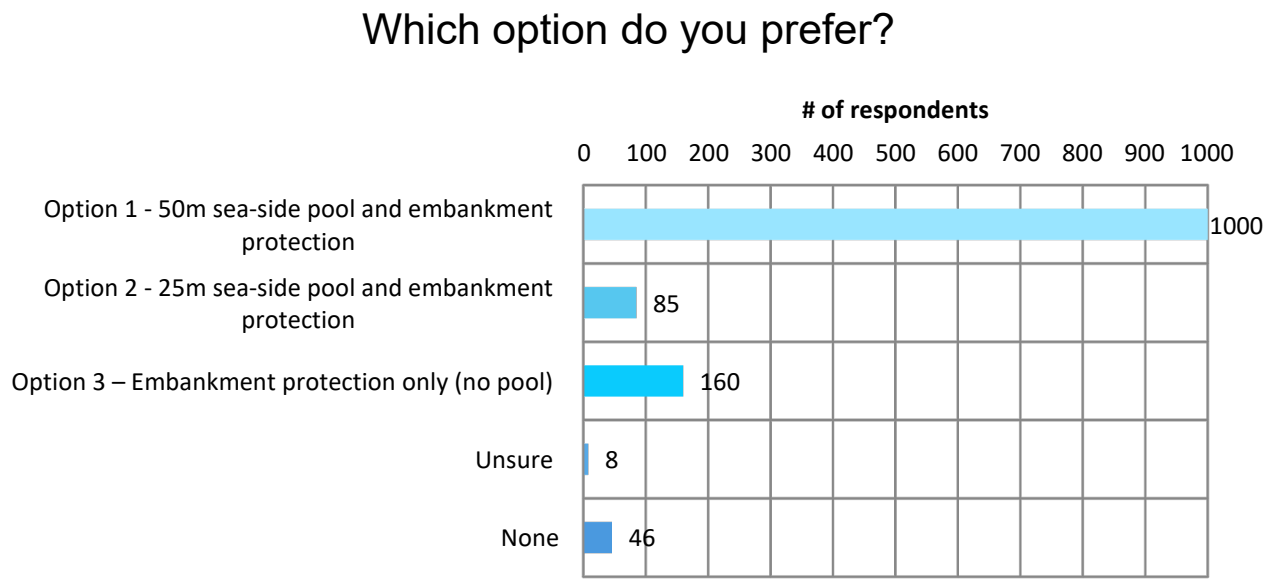

What concerns people about Option 3:

- No pool – some respondents do not support Option 2 because it does not provide a pool for the community with associated recreational, heath and economic benefits.
- Cost-benefit ratio – some respondents are concerned that Option 3 has a lower cost-benefit ratio, with significant costs and works involved for limited outcomes. Some respondents were concerned that this option would be a waste of taxpayer/ratepayer money, had an unknown funding source, and would waste the significant amount of money spent so far on planning and consultation for the seaside pool.
- Environment – some respondents raised concerns that Option 3 would increase rather than mitigate erosion, impact on sand dunes, and impact on wildlife. Some indicated a preference to use natural erosion control options instead including dune vegetation, offshore reefs and seagrass restoration.
- Aesthetics – some respondents were concerned that Option 3 would reduce the visual appeal of the area and would be less attractive than Option 1 and 2.
- Underutilised area – some respondents were concerned that Option 3 does not add any value to the beach and local residents, beachgoers and businesses. They felt it does not activate the area, provide a way to swim at this beach or attract people to the beach. They expressed that it is not user friendly, or the best use of the space and misses out on an opportunity to draw people to Hallett Cove and make it a top destination.
- Community preference – some respondents were concerned that Option 3 does not respond to the community demand for the pool, would waste the extensive community consultation and involvement to date, and would preference 'NIMBYs' over the general population who would like the inclusion of the seaside pool at Hallett Cove.
- Maintenance – some respondents thought that Option 3 would be difficult to maintain, especially due to the impact of sea level rise in the long term.
- Safety issues – some respondents were concerned about the safety issues associated with Option 3 including identifying that concrete embankments can be unsafe, and that not having a pool forces people to swim in the unsafe waters rather than a safer environment.

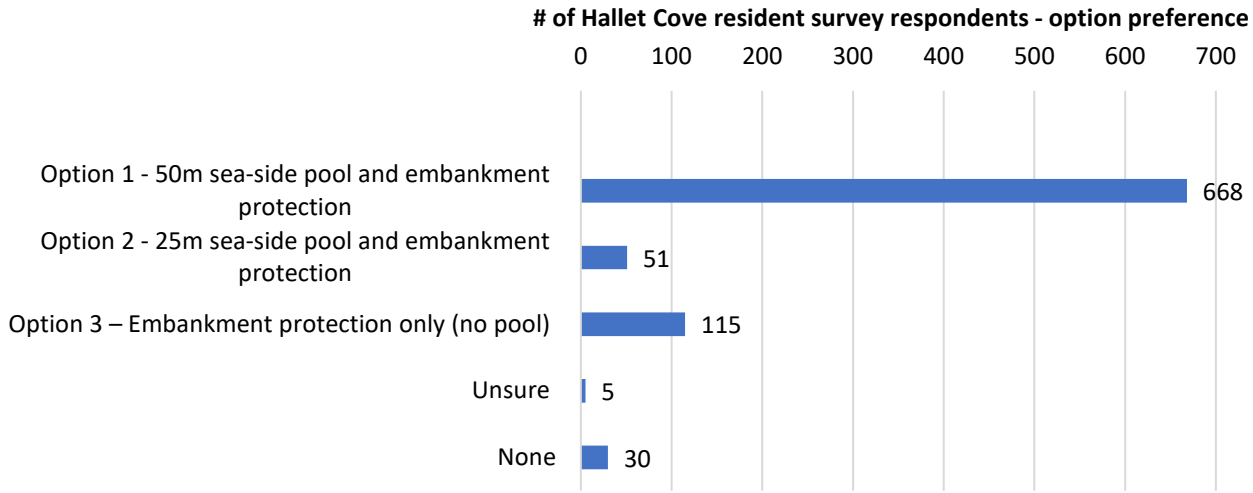

3.1.4 *Which option do you prefer?*

The vast majority of respondents (77%, 1000) prefer Option 1 – 50m seaside pool and embankment protection. 67% or 668 of these respondents who prefer Option 1 live in the suburb of Hallett Cove.

12% (160) of respondents prefer Option 3 – embankment protection only (no pool), 7% (85) prefer Option 2 – 25m seaside pool and embankment protection, and 4% (46) prefer none of these options.

Preferences for those who live in Hallett Cove are similar compared to all survey respondents. 77% (668) of Hallett Cove residents prefer Option 1, 14% (115) prefer Option 3, 6% (51) prefer Option 2, and 4% (30) prefer none of these options.

3.1.5 *Do you have any other feedback that you would like to provide on the options?*

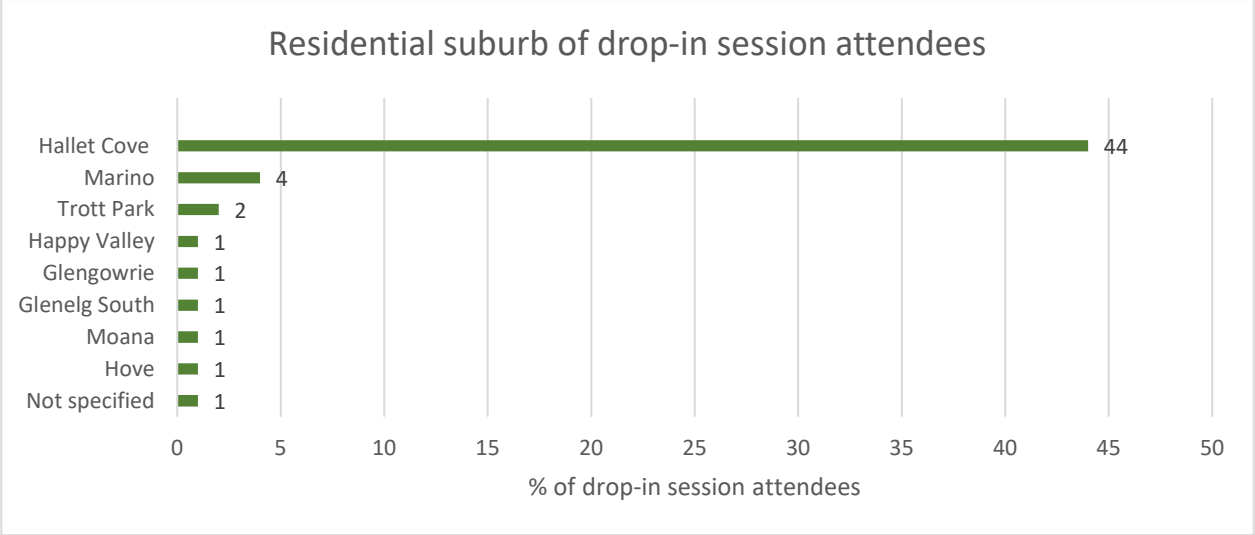

Key themes of comments provided for this comment were (verbatim comments are provided In Appendix C):

- Provision of a pool – many respondents expressed a desire to have a seaside pool at Hallett Cove.
- 50m pool – some respondents indicated a preference for a 50m pool.
- 25m pool – some respondents indicated preference for a 25m pool.
- No pool – some respondents provided a general comment that they do not want to have a seaside pool at Hallett Cove.
- Environment – some respondents commented on the environmental implications of the proposed works, with many concerns raised about the impact on the natural beauty of the area, loss of natural landscape, habitats, wildlife and tidal pools, potential to exacerbate erosion, and likely additional pollution to the environment from more visitors. Some respondents highlighted that this area is protected for a reason, and many identified their desire to minimise environmental damage through this project.
- Parking and traffic – some respondents raised concerns about local parking and traffic impacts and safety/convenience issues, in an area where parking already presents a challenge. Suggestions were made to provide additional parking to cater to increased demand, promote use of public transport, and consider use of a shuttle bus from the train station to the pool.
- Cost – some respondents were concerned about the costs of the project, including the use of ratepayer and taxpayer money and the potential to use this money on other community projects which may be used by more/different groups of people. Some were concerned that funding is not secured and that maintenance costs are unknown. Others expressed a desire for adequate money to be spent to ensure the pool are built right the first time to avoid retrofitting costs down the line.
- Timing – some respondents highlighted their eagerness to have seaside pool opened to the community soon, and some expressed concerns that it will take too long to build.
- Aesthetics – some respondents were concerned about disruptions on the scenery, and the potential for the pool to become rundown and unsightly in the future.
- Supportive infrastructure – some respondents identified the need for additional supporting infrastructure including shade, public tables and chairs, change rooms, toilets, lighting and upkeep of footpaths leading to the beach, solar power and public art.
- Tourism – some respondents highlighted the benefits of the seaside pool for tourism, providing an opportunity to 'put Hallett Cove on the map' and provide a unique offering in Adelaide.
- Health and wellbeing – some respondents celebrated that a seaside pool would promote healthy living and outdoor exercise.
- No need – some respondents felt that there was no need for a seaside pool because there are swimming beaches nearby.

- Impact on existing recreation – some respondents were concerned about the impact of the proposed options on existing recreational activities at Hallett Cove beach including surfing, swimming, snorkelling, walking, exploring rock pools and dog walking. Some felt that increased visitation would make the beach less pleasant for existing users.
- Activation – some respondents were excited that a seaside pool would activate a currently underutilised area and improve the sense of community culture in Hallett Cove.
- Families –some respondents thought that a seaside pool would be a great family destination and supported the inclusion of children's pool.
- Tidal refill – some respondents were concerned that the pool is unable to be naturally filled by the tide, and that rocks, sand and marine life may make their way into the pool during storm events.
- Access – some respondents were concerned about access for emergency vehicles, while others highlighted the importance of the design enabling access for people with a disability through rails and ramps.
- Alternative erosion control measures – some respondents indicated preference to use other options to address erosion e.g. dune revegetation, seagrass restoration, offshore reefs or groynes.
- Noise – some respondents raised concerns about noise impacts and suggested investigating noise abatement options.
- Maintenance – some respondents expressed concern about maintenance of the pool including management of storm damage and what happens once the pool reaches its end-of-life.
- Design – some respondents suggested pool design elements including designing the pool to cater to a wide range of uses and depths and heating the pool.
- Safety – some respondents identified the need to consider pool safety in design and operation, and management of antisocial behaviour. Others believed a seaside pool would provide a great opportunity to provide a safer swimming option on the beach which avoids the ocean's rocks, rips, sharks and waves.
- Geological significance – some respondents raised concerns about impacts on the unique geological and heritage site of Hallett Cove beach, cliffs and surrounding area.
- Communication – some respondents expressed a desire for community and residents to keep informed regarding project updates.
- House value – some respondents identified that the seaside pool may increase the value of local houses.
- First Nations – some respondents suggested consultation with First Nations community on this project.

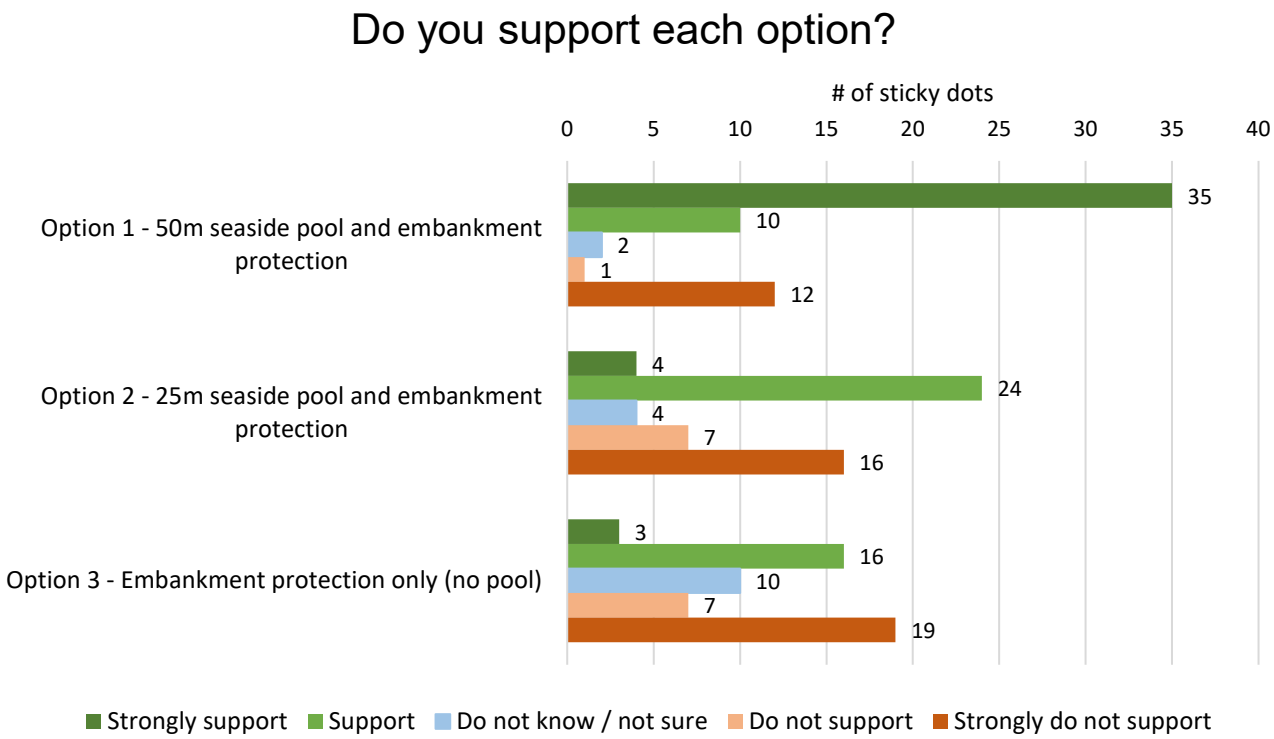

3.2 Drop-in session

56 people attended the drop-in session. 79% (44) of attendees were from Hallett Cove.

Each participant was given three sticky dots to put on a poster to show their level of support for each of the three options.

Option 1 – 50m seaside pool and embankment protection received the highest level of support with 45 dots being placed across strongly support and support.

Verbatim comments provided on workshop feedback posters are provided in Appendix E.

Themes of comments written on feedback posters included:

- Parking – some attendees expressed concern that parking is already an issue and will be further exacerbated by the pool. They identified the need to consider how to cater to increased demand including considering increasing train parking/use or making streets one way.
- Environmental impact – some attendees expressed concern regarding the impact the pool will have on the environment, geology and ecology during construction and operation and identified a preference to keep the area natural. One attendee identified concerns around energy and embodied carbon involved in the pool. One attendee would prefer a nature-based solution to address erosion issues rather than a hard infrastructure solution. Another attendee identified the opportunity for sea/pool walls to be designed to include features to encourage inter-tidal sea life.
- Visual impact – several attendees raised concerns about the visual impact of the proposed designs on the beach including for esplanade residents. Others identified that they preferred the aesthetics of the 50m pool over the 25 m pool.
- Supportive infrastructure – some attendees identified the need to carefully consider the provision of supportive infrastructure including toilets, showers, change rooms, parking areas for food trucks, and shade. Several attendees supported the proposed ramp access to the beach.
- Costs – some attendees raised concerns about construction, operational and maintenance costs of the pool, including use of ratepayers funds and impacts on local house values.
- Sea level rise – some attendees identified they preferred to a plan for managed retreat back from the coast rather than building a pool or seawalls to manage coastal erosion.
- No need for a pool – some attendees shared the view that a seaside pool is not required at Hallett Cove due to the ocean nearby and abundance of beaches and existing pools in the area.
- Tidal flows – some attendees raised issues with the tidal flow into the pool, including concerns about water quality during periods of high stormwater runoff, jellyfish or other objects getting into the pool, and interaction with the local stormwater pipe. Several attendees also had questions about how the water would be pumped into the pool.
- Recycled rocks – some attendees suggested that sand would be better/more comfortable to use adjacent the pool rather than crushed rocks.
- Impact on current beach users – some attendees were concerned that the proposed pool would impact on existing ocean access for swimmers, kayakers and snorkelers.
- Size of pool – some attendees commented they would prefer a 50m pool, while others that they would prefer a 25m pool (note: a 50m pool was shown as preferred by number of sticky dots).
- Safety - some attendees appreciated that the pool would provide a safe place to swim, while others raised the need to consider safety features such as a defibrillator.
- End of life – some attendees were concerned about deterioration of the pool over its lifetime and what would happen with the site once it reaches its end of life.

- **Consultation** – some attendees raised the importance of considering locals' feedback, while another suggested to consult with the original custodians of the land.
- **Design** – one attendee identified that they would prefer no lap lanes in the pool.
- **Nighttime access** – one attendee identified potential issues with noise and other trouble when people accessing the pool at nighttime.

3.3 Email submissions

Six email submissions were made to Council during the consultation period. Submissions are provided in Appendix F.

Key themes of concerns raised in submissions included:

- Parking, which is already an issue.
- Scenic and amenity impacts.
- Cost of the project and maintenance and the impact on council rates.
- Further exacerbation of erosion of the beach and cliffs, including through tyre tracks of construction vehicles and the pool itself.
- Damage to the pool and beach/cliffs during storm events.
- Preference for costs to be invested in the Olympic pool at Oaklands Park.
- Lack of areas for families to relax and watch their children and no shade.
- Importance of heathy water and user safety

Submissions also raised:

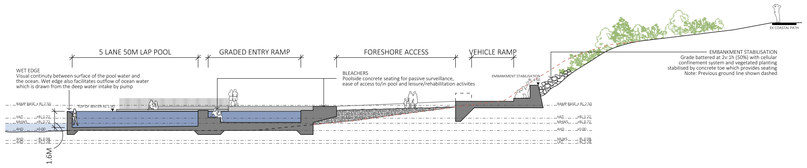

- Support for ramp for wheelchair/disability access, and importance of ensuring the gradient of ramps are gentle enough to facilitate genuine access.
- Preference for Option 1, as it better utilises the area and offers a good combination of the wading pool and 50m pool as well as accessible entry.
- Lack of changerooms, showers, additional toilets, places for lifesaving guards or seating
- Lack of fences for regulating access

Appendix A – Seaside pool design options

Concept Design
Summary of Options

Option 1 50m Sea-side Pool and Embankment Protection

Summary

A 50m seaside pool adjacent Heron Way Reserve including stepped concrete benches and beach access pathways that also provide embankment protection against coastal erosion. Includes a children's wading pool with a natural rock floor.

Advantages

- Public foreshore access enhanced
- 50m standard lap length preferred for consistency in endurance and fitness/health benefits (30% of sea-side pool users partake in lap swimming) and permits pool to be used for competitive events
- Storm-water outlet efficiently diverted for beach and water quality control
- Pool situated parallel to the contours of the beach
- Orientation and location allows pool to remain in use through broader range of surf conditions and protects ramped entry behind lap lane

Considerations

- Larger footprint
- Greater total project cost
- Channel to be excavated for deep water intake below rock platform
- Maintenance of 50m pool more involved, marginal increase relative to 25m pool
- Vision impaired users limited to using eastern most lap lane of pool as it is has a continuous edge. Lane is also most exposed to wave action, however it is largely protected by rock platform embankment

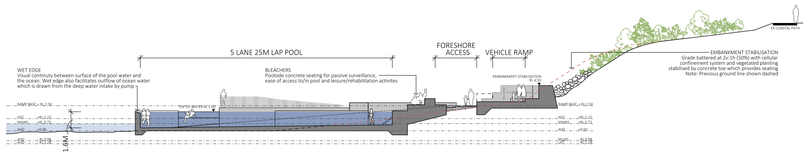

Cost

Capital : **$10.3M ex. GST**

Ongoing : **$200K pa.** (Mid range)

Option 2 25m Sea-side Pool and Embankment Protection

Summary

A 25m seaside pool adjacent Heron Way Reserve including stepped concrete benches and beach access pathways that also provide embankment protection against coastal erosion. Includes a children's wading pool with a natural rock floor.

Advantages

- Public foreshore access enhanced
- Reduced total project cost
- Smaller pool footprint
- Wet edge to end of ramp in the pool provides seating and frames views to Black Point
- Lap lane for vision impaired swimmers is protected, has good access and a continuous edge

Considerations

- Storm-water outlet indirectly diverted, at higher cost
- To permit access for maintenance vehicles, long axis of pool must be at 90 degrees to beach
- Channel to be excavated for deep water intake below rock platform
- 25m lap length less preferred by swimmers for fitness

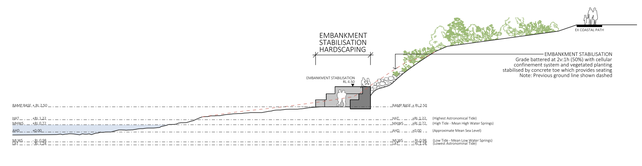

Cost

Capital : **$9M ex. GST**

Ongoing : **$180K pa.** (Mid range)

Option 3 Embankment Protection Only (No Pool)

Summary

For the purposes of this consultation, concrete structure and beach access pathways adjacent to Heron Way have been used as an example of a solution that provides protection against coastal erosion. Other coastal management responses through this section will be considered as part of the "no pool" option which may include rock armouring, reinforcement and planting.

Advantages

- Public foreshore access enhanced
- Reduced total project cost
- Reduced ongoing maintenance cost

Considerations

- Storm-water outlet unchanged, ie discharges onto the beach
- Coast more exposed to hazardous surf
- No lap or children's pool provided

Cost

Capital : **Up to $2.7M ex. GST**

Ongoing : **$55K pa.** (Mid range)

- None

18. Do you have any other feedback about a sea-side pool and embankment protection at Hallett Cove?

OPEN TEXT

Appendix C – Survey verbatim feedback

What 3 things do you most like about Option 1 — 50m seaside pool and embankment protection?

None
Large enough for future suburb growth, allows space for more families to spread out and use it, hugs the shoreline nicely
I love swimming and a 50m pool is the best to swim in. I love the overall design. Having the option to swim in a pool would be beneficial for people like me who do not feel comfortable or confident to swim in the open ocean. The ability to make swimming available to all people no matter their income would be very much welcomed.
Visually enhances the area and 50m is more appealing than just a 25m dipping pool. Love, love, love the look. Well done.
The pool
Nothing
little cost increase for larger pool, most user friendly, allows for large public use
Size, visual aspect, accessibility
Embankment protection Lots of useable pool space Kids area
Sufficient space for large suburb population, Believe Pool should be heated and not linked to seaside - More like Scarborough beach Pool in Perth. Provides year round use.
50m is more appropriate for lap swimming
Have somewhere to swim nearby.
A pool we can exercise with space
The 50m pool
50 m lanes will ensure use for lap swimming in mornings and evenings
Larger space for people to swim so less crowded.
Larger pool for public use Wading pool
None.
will improve the usability of Hallet Cove Beach, will provide a point of interest for Hallet Cove, and provide a safe and effective facility for exercise through swimming for people of all ages.
Good size for fitness or casual users. Increases the use for water activities at Hallett Cove. Good for tourism and locals.
provided for everyone. easy access looks good
Opportunity to do laps Spaced out design for larger usage - also nice optically Protection of embarkment
Allows the area to be used for swimming. Cost effective. Enhances the overall area.
the ramp and access to pool, the length of the pool

large, incorporated into part of the beach that is generally unusable (rocks), seems to be useful to a wider variety of users, ages, semi-professional and recreational users
Pool
I do NOT support any type of swimming pool being built at HCB
Pool Children's pool
Big pool, the Children's wading pool, and the embankment protections
None
50m pools plenty of room for the whole community during peak summer times
I am very keen on this happening, and to do it, it needs to be done properly or not at all. 25m is not long enough for swimmers where 50m is. In hot summers days the extra pool space will be very welcomed I feel. A lot of families in Hallett Cove with young children will welcome the child friendly access too.
50m pool to support more people. Kids wadling pool Coast protection
I like that fitness fanatics can do thier exercise in the 50 metre pool and still have enough room for casual swimming
Attracts more tourists to Hallett Cove which will attract more business (beyond just one Boatshed cafe)
It will be such a great asset to our area. They are so popular interstate- we need one in SA. I really hope this goes ahead.
1./ Ability for my family and I to use the pool for health / fitness purposes. 2./ Provides our local community with an infrastructure asset that is non-existent in metro Adelaide beach communities. 3./ Contours very well with the outline of the beach.
Do not like it at all
If the project is to go ahead, I believe it would make sense future proof the popularity of the pool by investing in the 50m option - this will bring increased family, health and social traffic to the region, so we should build the design that can fit the most people, and provide the most value. Ideally, people will come to use the pool as a lap pool, which should be 50m long, in-line with existing lap pools in the State and Nationally. The pool will provide economic benefits with increased traffic and tourism to the area, this could support any new or existing local Hallett Cove businesses.
More space for more people to use rather than the 25m.
Something for the entire family Can use it for doing laps A reason to come to hallet cove
The 50 would be great for fitness, but also provide extra room during summer
Such a beautiful beach, other than for swimming! This solves that issue
-Enables lap swimming -Keeps the younger ones to the smaller pool -Still protecting the embankment
Lots of space to accomodate the community and visitors
Decent sized pool Good protection against erosion Right position.
go big or go home. build it and they will come. easiest access to beach aesthetically more balanced with existing infrastructure on land
50m pool

We would have somewhere to swim. I'm part of Seacliff SLSC so outdoor training would be amazing
More space! No point making a pool small so it's Over populated the size is important and the design looks beautiful
The use for the pool for my family Allow swimming again at the Cove Provide protection to the coast
More room for more people - worry about anything smaller for comfort
Fun for my toddler but concerned you'd never get close enough to it on a nice day because of crowds and parking.
Usable Family friendly Aesthetically pleasing
Provides fitness options. Will bring people to the community. Will bring profits.
None as they will all cause more erosion to the coastline
1. 50m size enables better sharing of the pool for all 2. Opportunity for swimmers to have a safe place to swim 3. Attract business to Hallett Cove (put us on the map!)
Larger pool size with embankment protection.
Good length for swimming, good attraction to Hallett Cove
Such a bonus to the area, sympathetic to the existing beach scene - seems to have been designed to blend in
Bigger pool so less crowding
Nothing at all
Exercise pool and serves other options for events and division of pool for other users.
Good swimming at hallett cove, it's currently very challenging to do so
Large enough area for it to be enjoyed by many people.
May as well go big, we will regret it if it's too small
50m big enough to exercise, as well as support a lot of people in peak times Kid wading pool good for families Embankment protection included.
I don't.
Large pool for optimal use
Length/Size Embankment protection Ease of access
Good idea, fun, relaxing
Size of the pool, location and orientation.
Lots of room Looks good
Size of pool 25m would not be adequate. The pathways and erosion/ embankment protection
A full size pool would support swimmer development from a sport perspective.
Bigger pool suits our family needs
Absolutely nothing
Large, full size pool. Fits well into the original beach landscape. Get more people using the beach area

Family fun Tourism Health/exercise
Size of pool, beach access
I would definitely use a 50m pool to swim laps as the salt water is much healthier than chlorine! And what a beautiful environment to do it in.
Community area for kids to use Appeals to teenagers
Bigger pool, embankment protection, close to home
I like the visual appeal & I think a bigger size pool will accommodate how popular Hallett Cove beach is becoming.
Usable pool - currently cant swim at this beach and embankment protection
Large pool and embankment protection
Large pool - I think this will be very popular so may as well do it properly from the beginning Toddler pool Environmental protection
Size Will ensure less crowding Looks like best option
Length of pool Great design Great embankment protection
It's horrendous and the fact it's even gotten to this point is a joke. It's a failed labor policy from 2017 pre election which David Speirs copied and ran with. The majority of the support for this monstrosity (in a state heritage area) are fly by nighters who don't live in Hallett cove.
It's big enough to cater for the amount of people who will utilise it.
Opportunity for families to exercise and have fun. Local outing destination.
Option for fitness Option for kids Great for residents
- Looks fantastic - Will allow for swimming at local beach - Potentially good for local tourism and Hallett Cove reputation
Length of pool & embankment protection
Use space that would other wise be just rocks.
It looks more impressive (visual appeal will attract visitors to spend money in the area) and the larger size will cater to more users
50 m pool is big enough for everyone
Larger pool can accommodate more people. Cost per meter is lower for 50m versus 25m. Better to spend the extra to get the biggest first time, rather than having to upgrade at significant cost later.
Size Location
Larger pool for fitness lap swimming, can be utilised by more people at the same time swimming laps, I think I like the idea of swimming along the beach line rather than out and back
Size. Provides more space for members of the community - if we are going to build a pool may as well do it properly
It will make the area more usable, it will increase tourism, it won't impact the natural environment

Large pool, Natural beauty of the area maintained Unique to South Australia.
Bigger pool, greater the attraction for Hallett Cove, more appeal
More space. Means more access for more people especially those that swim for fitness and not just leisure.
Excellent forward thinking decision Full length pool Would attract people to Hallett Cove community Would be a great addition to SA It would be money well spent on the area
Size of the pool and layout
Size of pool Location
The size due to the huge number of families in the area The conservation aspect
I like the long lay out of it, looks appealing. A lot if people can enjoy it more, especially kids. I can't really envision the embankment from the picture as it's not clear enough, and just looks like a messy pile of rocks
I think this seaside pool will get used quite alot especially in summer so I believe the larger one will be better. I like the wading pool for children and the embankment to help erosion
size, view to sea, parking close by
Lap swimming - fitness for older people. No cost exercise Childrens wading pool pool add to coast protection
The size, the side views and extra lounge space
Pool
50m Having a pool Local
I think 25 m may be a bit small if it becomes popular.
More pool space. Will provide space for recreation swimmers and for exercise laps
Large enough for plenty of people to use at the same time.
Value for money when compared to alternative options. An amazing opportunity to put Hallett Cove on the map.
Design and how it looks
Size - I used to live in Sydney during the 2010's and the amount of use the seaside pools get is amazing. As the only location in metro Adelaide, it needs to be 50m as 25m will be too small. Let's do it right from the outset! I like the addition of a Children's Pool also to make it more family friendly and more multipurpose. The colours on both option 1 and 2 is neutral and doesnt make the pool stand out in the environment also. Great work
It is large enough to be worthwhile to residents and largely non-intrusive to the surrounding environment.
Longer pool Embankment for protection Great design

Great community asset
I have been in favour of a beach side pool since it was first suggested
disabled access olympic size pool infinity edge the look isn't intrusive to the landscape
Long enough for swimmers for a few swimming lanes Kiddos can use them without being interrupted by adults Can accommodate more people since there are a lot of visitors from all over Adelaide
Fits well within the landscape Provides greater access to more people Ability to host future competitive events
Nil
Provides a space for safe swimming in an otherwise rough beach. Keeps people from swimming in rough waters and using landscape to access other areas of the beach. Bring visitors to the area to support local business (e.g. Boatshed).
It's the perfect size of pool to use for all types of swimmers.
1. Can be used as a lap pool. 2. A lot of space for adults and children to co-swim/play. 3. Encourages the community to get fit.
It's such a wonderful area for familys and this will encourage even more people to come and enjoy this spot
Decent sized pool to allow users sufficient room without being too close together. Still protects embankment. Better use of the Hallett Cove beach as swimming not possible in the sea due to rocks.
I think it's a great idea and would be very used and love by the local Hallett cove residents and I love that embankment protection is considered. I think the 50m is a better option then only 25m.
Bigger pool...less crowding
Good sized pools (assume are salt water)
Nothing it's protected land and the pool idea does t work!!
None of it. It is nice as it is.
Layout and usability. 50m is best all year round for triathletes.
The embankment protection.
Big enough for lots of people, great design, extra kiddy pool
Interesting project.
50m pool kids wading pool and benches
Aesthetically pleasing and due to Hallett cove not being a swimmers beach a large pool will provide opportunity for more people to access swimming. Kiddie pool also a great idea
50m pool; Able to swim at beach;
Size, location and beach and adjacent area preservation love itand protection
Great options for summer, the area can get very crowded so the more room the better !
Bigger pool for more people
Large pool for laps Large area for leisure Protect environment
Wading pool Location Protection of embankment

Agree with pool that is usable considering beach isnt
Consideration to Coastal embankment , parking and length of pool
Side with sea
I love the idea of a pool there
Pool size Practicality
I love the idea of a pool at Hallett Cove for many reasons
Larger pool
If you are going to build it - Go big or go home! Summer this thing will be packed out - 50m swim length is good for triathletes training and swimming training.
Excellent opportunity for the community and the ongoing development of the suburb
Size and functionality
More space for more people Can be used for swimming laps The design looks better
Length of pool for lap swimming, extra space so not too cramped in summer
It would be large enough for lots of people to use it, and to swim laps It would be something unique in south Australia If it's going to be built then make it large enough to be used as a proper pool
50 m pool Protection from erosion Beach access
Bigger pool accommodates for more people. This will be a massive tourist destination in summer. Smaller will not fit people safely
Lots of space especially for the summer months, good lengthy for exercising
Future proofing with larger pool - pool will be popular Integration with existing infrastructure Separate kids pool
The size of the area allows for the greatest number of people at one time in what is sure to be an exceptionally popular attraction. The graded entry on the Eastern side looks like it would allow for much better disabled access. The north-south orientation looks aesthetically pleasing.
Aesthetically pleasing Useful size Offers protection
50m would be more spacious for long term use by the community. It will be the only outdoor pool south of Oaklands Rd and should prove to be very popular.
Size
The larger lap swimming pool, the ease and accessibility to people, my mum is elderly and has difficulty with walking and this will ensure she can enjoy a day out with the family. Great to see this taking place in Adelaide. Coming from Sydney originally we are used to seaside pools and they are a great investment for the area and offers a great and cost-effective way for anyone to exercise and experience the beautiful coast line.
Large enough for more users
Size, Location, Orientation
1. Decent size that won't be outgrown in the future ...(build it once) ... 2. Embankment much needed 3. Will serve the neighbourhood kids well on hot days

Must be a 50 metre pool or there is no point in the project. it looks great, and will be of high use in summer,
n/a
Absolutely nothing. It's a disgrace.
Size
I believe a smaller pool will neither satisfy the needs of people who want to swim nor that of people who don't want the pool. A smaller option would be a lot less suitable for swimming (exercise) also considering crowding
If you are going to do something do it right.
1. It will be very popular and 25m won't be big enough, ie crowded and water quality. 2. Serious swimmers use the ocean in Summer and would love a big pool for laps in winter when not busy. 3. Kids wading pool.
Larger pool Great access Family friendly
Safe cheap ocean swimming, similar to what is experienced at any lap pool
The pool will be big enough for the local population to use without getting overcrowded. Love the embankment protection
Provides a safe and accessible place for community members to enjoy a swim at HC beach. Provides an additional attraction point to Hallett Cove. Encouraging more people to visit the area with economic benefits for local businesses. The larger size at negligible additional operating costs compared to the smaller option means more people can enjoy the facilities for a similar ongoing cost
THE EMBANKMENT PROTECTION IS VERY IMPORTANT,
Length of pool, look near the beach/foreshore
The design look, length of pool & kids wading area
The enterance and overall look / aesthetic The space so more people can use at one time Use of space
Aesthetically pleasing, doing the project correctly the first time .user friendly. Big enough to hold competition or community swimming events. I would use it every week including winter.
Love it, think it will be great for the suburb. Seeing as HC beach isn't sandy and can be difficult to get out to swim on slippery/sharp rocks, this will create somewhere all ages can swim and enjoy getting in the water.
Great to have a full size pool of 50 metres as well as a kids pool, pool utilises existing beach access and old boat ramp facility. Pool is tucked away as will not be seen from homes
lap swimming plenty room for users covers all ranges of uses of pool
Largest pool
It's large for everyone to use
More space that will allow for lap swimming and play. Tidal fill process. We have been to the one on yorkes and it's unclear to me how often the ocean cleans/cycles into the pool and clears up the pool floor.
It looks balanced with the beach surrounding, plenty of room for everybody, provides better access to beach.

Large lap pool Social pool and retention of the embankment for the environment
1.Can evaluate people with length of pool (just fun or everyday exercise or more space for everyone) 2. Blends in the scenery 3. Inclusive design for everyone not just family's
The size of the pool, access for children and the embankment protection
Please move this design further north.
Size gives options and space for people to do laps, or stay in space and spread out from one another. Uses coastline nicely, still leaving plenty of space aside.
Most usable space for all age groups. Usable in most weather conditions. Usable all year round.
An easily accessible and comfortable place to swim, as opposed to rough seas and sharp rocks. Expanded use of a nice, communal area 2 pools, catering for different ages and swimming levels
Large pool
Promotes healthy living; different offering to the other beaches.
Length protection of bank to prevent slipping
Big enough for many visitors. Protects the coast. Don't have to travel to yorke peninsula to utilise a sea pool!
The size for those that enjoy laps as well as it not getting overcrowded. The wade in slip lane into the larger pool. The Toddler pool for families.
Opportunity for all to exercise and play
Plenty of room
I think it will be popular so best to go with the largest design so it's not overcrowded.
Larger swim space Good orientation Aesthetically fits in best
Location, length, access
1. Size to cater to public outside of hallett cove that also is their closest beach. 2. The appeal of this design reminds me of Sydney's seaside pool.
If the project is funded might as well go for the option that will cater for the most people. It blends a bit more with the coastline.
Amazing coatline which will be even better with a pool. But of cpurse protection feom erosion is also important
Size enables plenty of people to be able to use at once.
Large pool (enough room for visitors) More hygenic than a smaller pool. Would increase value to the suburb and possibly increase development of the Hallet Cove shopping centre.
Honestly Adelaide doesn't have anything like it It would add so much value to the area Would be amazing to use !!
Largest option is preferred Location Embankment protection

It's something we would use as a family on a regular basis Large size for a big community Access for kids
The pool! Because Hallett cove beach is too rocky for swimming
- Size of pool - Still includes the embankment protection - design
Both options of a decent sized pool but also protection.
50m pool, wading pool for kids and protection from erosion at the banks
I think a longer pool is a better design
Bigger pool means more room for more people Less crowded Looks so much better
Looks amazing 50m pool and kids pool would be fantastic
Size for all to enjoy, kids pool, coastal protection
The 50 metre pool will be large enough to accommodate a couple of lap swimming lanes as well as other pool activities and swimming carnivals.
location
The size of the pool, the location and the interest it would derive
The pool is a nice size for all to enjoy. The pool looks fantastic. Embankment protection is beneficial.
Size, look, unique aspect of location
Better usage of funds to enable competitions, carnivals,events, big enough to section parts off for swimming lessons etc.whilst still allowing ample space for other users.
The larger pool will provide more space for users, especially in holiday season The larger pool is more pleasant to look at as it flows with the beach Once the design and ground work is done, the bigger size would not add too much to the base cost
Adelaide's first seaside pool Perfect location Olympic size
N/A
Size Kids facilities Protection
Larger pool and fit for purpose
I do like the look of this pool
Larger pool will be better for the number of people that will be using it.
Large enough to gain national attention, visually pleasing
Size of pool Position of pool Shape of pool
Fun area for kids, big enough to fit everyone, makes the beach more usable
Such a great attraction for the area. Takes a great spot to another level. Encourages my family to be physically active.
It’s one of a kind in Adelaide in a beautiful location
The embankment protection, the size of the 50m pool and the additional pool
Opportunity for community. Currently you can not swim at the beach as it is unsafe.

The size is big enough to accommodate crowds the kids pool and the sleep design
It makes sense to use the 50m option to allow for future demand
Biggest pool would mean more room for more people at one time. Bigger pool = more attraction to the area More attraction to the area = more money put into small businesses in the area More revenue for small businesses = more jobs for locals
I do not want the pool
Nothing
Embankment protection
The pool is large enough. It will be popular.
Size
It looks good and believe it will taoe into account the growing population of the Hallett Cove, Sheidow Park, Trott Park community, along with external goers and holiday makers.
Nothing
A 50m pool allows for lap and lane swimming and a larger volume of people to use. The embankment project is good for the environment and aesthetically pleasing
Good size for the community I think will use it, it will improve community use of the beach, attract visitors to the area, local business, etc. improved and increased parking will be necessary
Tourism to SA and building up the hallett cove community
It's bigger and looks better, blends in better with the environment.
Pool length Design Inclusive
Blends into natural coastline and isn't an eyesore Good length, if one is going to be built it should be big enough to cater for our suburbs appropriately in summer
Embankment protection
The size of the pool ensuring space for people, the kiddie pool inclusion along with the erosion protection plan
The functionality The look Allows more user friendly space
Size, access, sea water
Community, kids safety at the beach, protection of the beach erosion while being something the community can use
Full length pool makes use of the beach and will help with not over crowding Kids pool is a great idea The supporting of the land around will be much needed to keep the park and beach secure
Olympic size pool and smaller pool for children. Embankment protection
Bigger pool for users Great for residents families Good for our health
Located away from the playground, erosion protection, kids wading pool area
This makes it most appealing to visit. Variety of areas for patrons to use. Increase tourism for small local businesses.
Length of pool , these types of pools are all over the east coast and are brilliant and well used assists to the community for young and old.
there is room for plenty of people

50m lap pool is important. I think the design also makes it easier for those with access needs and mobility to get there. More consideration could be done though. Eg ramps into the pool.
The size, the wading pool
LARGE POOL- MORE USEFUL FOR MORE PEOPLE LAP SWIMMING APPEARANCE
Larger pool, look , place to actually swim
Embankment protection,protect natural environs
To have an environmental safe pool
Bigger pool to cater for more people Embankment protection Children's wading pool
If you’re gonna add a pool, go big or go broke Protects against erosion Let’s me go swimmy at my beach :)
it’s big, safe and provides a pool for the children, while bringing the community together!
the embankment protection location and the size of the pool
The fact that is big enough for everyone and it will attract more people to Hallett Cove so the local businesses they will have a retun.. less people driving to other beaches. Coming from NSW where they have a lot of rock pool it will be amazing to have one here for us.. its safe for kids too
Large, child friendly
It will make the water more accessible for residents. It would also be a great addition to the area
Can be used by whole community Makes the water accessible Fitness
Good for residents and guests
Larger pool allows for more people and less congestion
This will help our local shops and provide a beautiful addition to activities in our area. Imagine being able to have a dip after walking the BW. Our beach has no use as it is not a swimming beach. The only other thing i would support would be bringing in a bunch of sand to make it usable.
Correct size for the area and usage, ability to be used by schools and sporting groups, improvement to local area , Would be a nice addition for board walk uses if they could walk and swim in the one area
We will use the swimming pool, good size and beautiful natural environment
The merging into the beach-side location. The enhancement to promoting both the area; and Adelaide as a whole. Building on to the boardwalk area.
The size of the pool. The design. The benefit to the community
It's going to be more effective for the community being that size. Having the 2 pools allows for the families with young children to come as well as the rest of population Will help with local property value and continue to enhance the suburb
the size of the pool look of how its been set out overall looks better
great addition to South Australia’s tourism which would boost business not just in Marion

Used to swim in seaside pools in NSW and would like one here
Able to swim at hallett cove beach
More pool space equals more flexibility of use. Direction of pool versus 25m.
I swim regularly @ Marion outdoor pool in the summer, and to have this on the doorstep would be fantastic
Use of beach, access to recreation and children's swimming opportunities
None
1. Will allow disabled persons to have access to swim 2. Will add to the amenity of the beach 3. Will allow children to swim Safely
50 m pool,
Length of pool means it can be utilised for competitive Swim meets, for example Interschool meets. It is more suitable to train for Lifesaving, Vac swim etc activities
If you are going to do it then do it right. That is an Olympic size pool. It will be amazing. Swimmers will train there. Triathletes and the like. It's good family fun. It's safe to swim in ocean water. It is such a cool concept and will be the envy of most coastal city's and towns.
I have lived in Sydney where there are many seaside pools. The addition of a pool in Adelaide would be a welcome attraction to the area.
1. 50m makes the pool compatible with more uses (exercises, able to host multiple groups/events simultaneously) for a minor additional investment. 2. The main complains (which I disagree with) are that it will ruin the natural environment. Where the pool is positions is at the opposite end of the beach in an unusable area, and away from the boardwalk, cliffs, cafe etc, and leaving the rock pool area untouched. 3. The other complaints I have heard are around residents bearing the cost of operations. Again, I disagree (Marion is a large LGA), but also believe $200k/year to be a very modest expense, particularly in comparison to the income it is likely to bring and boost to property values.
The 50m pool The position The way it looks
Using most of the space available, seaside pool, protects embankment
Great size Good design Natural looking so suits the environment
Since size of the pool will not significantly have adverse effect on the surroundings, the bigger the better. I see it would be beneficial not only to the general public, but also provide an outlet for school swimming comps. up and down the railway line, from say Brighton High to Seaford Area School. Summer "learn to swim" could also occur there.
-longivity, by dong a longer and larger pool you cater into the future with population growth etc -it seems to suit the surrounding environment well -your providing to all community groups
I do not support
The wading pool
A safer place to swim and enjoy the ocean. Another reason to bring visitors to the Southern suburbs of Adelaide. Increased cash flow to businesses in surrounding areas.

Larger size of the pool, making it suitable for training and competition while allowing more people to use it at the same time when it's not being used for competitions.
Room so your not super crowded A use productive use for the space Views
Nothing Nothing Nothing
The facility; bigger; looks good.
Bigger the better doing something smaller would not be worth it. Encourage families to come down and also support local businesses and really put hallett cove on the map.
I think any smaller and it will get crowded. Big good length for swimming laps. Looks impressive so will be used.
Size is perfect
If you bother to build a pool, build one that will be big enough to meet community need. More parking will be needed though, it gets very busy there as it is.
Large lap pool Kids pool
50m length is optimal for lap swimming. Wouldn't be useful for lap swimming if any shorter.
Nice big pool to cater for all. Good embankment structure. Surrounds.
Pool length, pool orientation. Size for future population.
Pool design
The size of the pool to accommodate swimmers, the wading pool for small children and the aesthetics of it all. Looks absolutely great! :)
1. Its design & aesthetic appeal. 2. Its location. 3. It's versatile, usable & the best value for money.
Versatility, makes the most of the natural land/seascape and bigger capacity on hot days.
I think the larger pool will be better for greater public access
Excellent proposal, love everything about it.
Plenty for room for everyone. Adds value to the beach which is is fairly unsuitable for swimming. Will bring people to the beach
1. Provides a safe facility to swim and exercise at the beach, unlike at the moment. 2. Pool layout and location. 3. Can cater to the many swimmers who not only live in the local area but the many visitors to Heron Way Reserve.
Aesthetically I think it looks better than option 2 and gives people more space to both swim and relax beside.
Safe swimming and use of the area
1) The designs are visually excellent and not only compliment the natural beauty of the area but greatly enhance its usability 2) Will provide a great community feel and meeting area for families and children 3) Will allow for both young and old and non able bodied people to access the water with ease (current difficulties exist with the rocky beach)
It develops an area for swimming in a properly sized pool, teaching kids to swim & recreation. It may assist in returning sand to the beach It enhances the recreation opportunities for all residents

More space to swim good outlook to ocean view good for families
Appearance looks great, it blends in and looks very modern
It is good for lap swimming, I can't do tumble turns. I like the configuration of the pool I like the public foreshore is enhanced.
Allows for more capacity. The wadding pool Protection
Location, Location, Location
Full lap swimming
I'd like to be able to swim 50m laps for exercise. I think the 25m pool might be too short for laps.
The larger pool size as I expect the pool to be quite popular. I'm also glad it still included kids wading pool too,
Size as this is going to be immensely popular due to actual beach being rocks yet an insanely awesome and local locstion
The size and space it offers How it fits nicely into the environment The overall design
The size of it will accomodate a high number of users.
1)The look 2) More likely to attract people to the area to live in hence possibly increase values of homes 3) cost difference between option 1 and 2 not great in my opinion
All of it
More lap space with all the additional housing going in a Seaford, Christies and aldinga. Plus increased density approved for Christies this will be full in summer. As a lifeguard you can do more with 50 meters like inflatables, fun runs and still maintain lap lane availability. 50 meters lanes don't feel as full and you could run more events here like triathlon etc.
Bring a lot of people to the area Better for doing laps Larger pool for the larger amount of people- not too compacted with people
Sized appropriately to meet demand. Childrens wading pool is a must inclusion. Direction and layout of the pools are more appealing than option 2.
Plenty of room for people to swim Plenty of tool parking. It's a beach pool, awesome!
Good size swimming pool
Lap swimming 50m, more space for more people to swim, allows for fitness and recreation.
Good size for training in and to host events. Can accommodate more people without feeling cramped. Not much more expensive than 25m option - good value for money.
The size, that it doesn't detract from the beauty of HC & that I think it will be well used.
1. Greater offering to the public due to increased pool size will attract more people, even from further away. This pool has the opportunity to significantly increase the presence of Hallett Cove/Marion Council in the wider South Australia due to its uniqueness. 2. better access into the pool 3, more space for everyone 4. an attractive alternative to a sandy beach

Good size Good positioning Access friendly
Big enough for all to use Looks very safe Almost natural
Big enough for large crowds
Will be popular as the coastal walk is and this is the best suited. Also good for lane swim users vs a small 25m pool
Size of the pool , great for families it's such a beautiful area to spend time & just lends itself to a pool setting . Considering the coastal erosion & its protection p
Great way to swim in the sea safely. Kids will love it embankment protection is essential
The location of the pool, the design and the fact that it will make the beach more accessible.
Large pool for lap swimming
The size , location, get the beach active
Having a pool available, improve usage of Hallett Cove beach, tourist attraction
Kids wading pool, embankment protection and Size
Pool size. Small pool would be next to useless. Big pool will get far more use and children's area makes it inclusive.
If this option is successful the more space the more beneficial to the community. Something cool down South that will attract people to our spaces and our businesses. SA has a habit or doing things wrong initially like a one way express way, let's save the hassle of re doing it down the track and just do it properly the first time.
I want a large pool to swim in. The beach is too rocky to swim. I like the location of it
The size of the pool being 50m long. The pool being lengthways. It's like a Bondi Beach style pool
Pool long enough to do exercise in Also separate pool for young children
Best pool size Good location
Pool for public, children pool, protection
Everything. Hallet Cove is losing its natural environment.
The size. For more than twice the size increase for not much more relatively speaking. Can cater for an increase demand of visitors.
Location, design, size..
Bigger than option 2.
Larger pool for community use Better use of space on beach front Likely to get used more
Bigger pool Looks better Good attraction and finally good use of beach
All of it - excellent

Can actually use the beach. Safety from RIPs, sealife.
The larger pool option makes sense for more comfortable use by participants. It will also provide the support and protection for a larger embankment area For the extra additional cost I think it is worth going for the larger 50 m seaside pool option
The inclusion of a children's waving pool, plus the fact it will be a swimming pool fit for exercise. Hallett Cove beach is fantastic but obviously currently lacks the lively feel of a swimming beach, this would add so much to the area and a struggling beach.
Value to community, aesthetically nice, neutral/positive environmental impact
Large enough to not be concerned about space
N/A
Kids pool
Kids pool
Lap swimming, free swimming,
More swimming space, wading pool for kids, twice the size of the 25m pool, but a small percentage more.
More useful to more people than option 2. Able to use the pool for swimming. Overall much better value for money.
- size of the pool will prevent it from being too crowded - it is the most eye catching and attractive option - it is suitable for serious training
There is nothing i like about it
Can cater for a lot more people, looks better Create the right design from the start
The size and concept generally.
Ability to swim for fitness. Amenity to Hallett Cove beach and environmental sensitivity. Diversion of storm water off the beach
Protection of the shore A good size pool and a swimming pool as The beach is not accessible for swimming
Good for children to swim and play Good for lap swimmers Conservation plans
Good length from training, it can accommodate more people with less crowding, would be the only public ally available 50m pool down South.
1. Great use of space and encouraging healthy and active outdoor living. Used to live in Wollongong and their 50m seaside pool was amazing and very much enjoyed and used by the community. 2. Great to have pool for younger kids to safely swim in Hallett Cove in wading pool as the beach is covered in rocks. Also 50m pool great for lap swimming and general play 3. Good to see pool incorporates embankment protection into the design.
I believe a seaside pool will be great for the community.
all good ideas
It is bigger so it can accommodate more people. It looks nice. Love the idea of a local swimming spot.
larger pool gives most community space visually appealing design I like the overspill/wet edge concept rather than relying soley on pump.
use the 50m pool for health and fitness lap swimming

nothing to like about option
Makes good use of a wasted beach, you can't swim in it currently would be good to be able to have a local beach we can go for a dip in. It will also help protect alot more of the area by providing a break way.
Big enough for public use
Less intrusive on a natural area
The size The position The shape
More space for users, better design and bank protection.
the size, the overall appearance and design, the location right at the beach area.
Full size pool for community, will attract events and training
Yes, looks amazing
Perfect position to have a pool which will serve the community and look amaxing
Love the design. Almost same price as option 2
For years I've been saying that Adelaide needs some seaside pools. I originally thought Glenelg might be the best option, but I'd travel to Hallett Cover to use it. I love the beach but I don't like swiming in the ocean unless it's protected / pool. I travel a lot to NSW and other states and there are so many pools along the coastline and I am shaking my head each time as to why we can't have it here. If we had a pool like this I'd be taking my kids there at least once weekly for a swim in summer / warmer weather. Going to the Aquatic center has been less enjoyable with them constantly closing lanes or the need to book specific lanes for certain timeframes. that takes all the fun out and I stopped going to the aquatic centre. In summer we want to be outside and enjoy the nice weather and get vitamin D. And with our hot summers in Adelaide a nice pool to cool off overlooking the ocean would be a dream come true! i would also like to lose weight and make swimming an exercise routine for myself. having a 50m pool, I would go there a couple of times a week (without children) straight after work for some exercise.
good size for all, safe space and view
Large for people to move and space
The size of the pools
Good size pool, can fit many swimmers, also possible a swimming club
Love that the beach becomes a viable swimming destination. We often come down and paddle, bring the dogs for a walk, but generally cannot have a swim. Fabulous use of a lovely beach.
Future proof, sea defence and capacity compared to option 2
Fantastic for kids and adults
1) Finally being able to swim in the ocean at Hallet Cove, without the risk of falling between or hitting rocks. 2) Adults and children being able to benefit from the natural salt water, micronutrients, fresh air, sunlight and view whilst enjoying the water. 3) Attracts more visitors and potential for additional commercial outlets. One cafe at Heron Way is not enough, especially when the quality is lacking and service is consistently terrible.
Nothing
Wading pool for small children eg grandchildren as a frequent visitor to Edithburg a good size pool is important for the numbers that will want to use it.
Improves the look of the coastline (breaks up the mass of rocks). It would provide an opportunity to lounge by the beach in summer (currently it's not really a 'lounging' beach). It would bring people to the area.
Nothing

1. more entertainment within hallett cove 2. causing more locals to possibly connect and stay active/exercise 3. it would be a lot more enjoyable with a big pool.
I dislike the structures do not fit into the landscape.
Size of pool as Hallett Cove and surrounds is a large area so it needs to cater for that. The ability to stop erosion while still providing a functional recreational area. How it will blend into the surrounding environment.
That it is 50m The protection And the pool being on Hallet cove beach
Size Location Embankment
Improve the area and beach
Design, concept and user ability
It's a bigger pool
The pool
- Fitness benefits of a 50m pool, there is a lack of 50m lap pools in SA - Mixed use options within larger pool - Provides multiple options for children and family programs such as annual water safety programs
Design Usability Concept
Size due to popularity. Imagine this will be very popular and larger size would help with crowding. Great embankment protection
The big size
A 50m pool is far better for training and keeping fit than a 25m pool. Great for triathletes!
Pool
The size and location
Large pool - more capacity Revenue for the area Makes the beach more useable
Th extra length of the lap pool
Bigger swimming pool Attract tourists Attract business
The larger size so it actually looks like a pool and not an Adelaide half attempt The larger size for the fact it's better for lap swimming It looks better overall
Proper size pool and valve for money
50m pool Children's pool Solution to swimming at Hallett Cove beach
The size Provides both options Exactly what this beautiful area needs

When I was living at Newcastle NSW I had the chance to experiment the sea side pool and it was a such an amazing experience to be able to be in a pool and connected to the ocean. I really think it will be a strong asset for our region, the community and potentially tourisms
It is big enough to accommodate future population growth of surrounding suburbs. Can be used for exercise, e.g lap swimming and still have room for play
I like they idea of developing Hallett Cove foreshore giving the community access to the water in a protected area without loosing too much of the natural cove.
The whole package long term fun for family
If you're going to build it, do it properly and not half assed (25m pool). It's 50m it allows for more patrons, better for local business
Size, location and accessibility
1. This option is the most value for money, providing both coastal protection but also allows for a valuable asset for the community. 2. This option presents the most aesthetic pleasing option, with the right proportions and scale to the coast and parkland. 3. This option provides a safe and practical swimming location for the residents of Hallett Cove ad southern region of the City, currently lacking facilities.
Location, size of pool and accessibility
Lap swimming, the ramp entering the pool is great for relaxing and is wheel chair friendly. Great access to the pool itself.
Hallett Cove Beach is a popular location for local residents and surrounding suburb a 25 m pool won't suffice the demand once the development take place
Access to beach - Wading pool - Swimming pool
If you are going to do it, make it big enough for the community. Also love the wading pool too, although I fear by the time it's open my now 2yo son will be too old for it.
Larger area of erosion protection; More options for recreational swimmers (ie lap swimming); Impact it will have on house prices in Hallett Cove.
1. swim lengths 2. design can be modified to include a few 25m lengths (for those who prefer shorter training lengths)
More room, More open layout, closer together in 1 area
The size Ability to accommodate busy times The attraction to residents outside of Hallett Cove
Adequate space, good integration into land/seascape, wonderful asset for Hallett Cove
Long enough for swimming. More people can fit in without feeling crowed. Like the wading pool , safe environment for children
The length is preferred.
Size of the pool, public access, improving hallett cove
Great concept & I feel this would be used regularly by the community
Its a long pool for the adults. And a small pool for the younger children.
Protection for coastal erosion. To be able to swim at Hallett Cove Beach.
It is a nice design and does not damage the area at the northern end of the beach. It allows greater breadth of usage.
Size of pool Seating space around the pool Wading pool

A bigger pool will provide more space for users, Hallett Cove gets very busy all year round It looks better Double the pool does not come at double the cost
Having a place to swim at this beach is going to be hugely popular there for the bigger the space the better.
1. Children would have a generally safe swimming experience. 2. Embankment protection to enhance the coastal protection. 3. Community place to gather as a family group.
50m gives enough space for swimmers and children area
It will provide a safe swimming area. It will add to the vibrancy of the foreshore precinct. It will provide the opportunity for people to exercise, including additional exercise for those traversing the conservation park to get to the pool. No parking needed for them!
Looks like it is the most functional option. Aesthetically pleasing too.
I like that it aligns with the shore line and looks aesthetically pleasing . .Blends in well with the natural environment and is designed with embankment to protect against erosion. Good idea to have ramp access for those in wheelchairs .
Be able to use it whole year Great project for community Safe use of sea for swimming
This option looks better Will accommodate more users Will put Hallett Cove on the map
Good for lap swimming
Decent size pool
50m pool is big enough to enjoy and exercise in. Also has a wading pool for smaller kids. Seating area and protection. It covers everything off for my family.
1. Plenty of room. 2. Water would stay cleaner longer between tides. 3. Be able to swim long laps with out turning.
It is good for community activities
Size. Protection of embankment. Position.
Environmental protection Leisure Tourism
Larger lap length pool Seperate children's pool Larger capacity to suit more users
it covers everything required
Fits better into the landscape, able to be used by local schools and sporting groups,
Big Big pool for something to do in the area and protection :)
Pool length
Room for lots of people in the pool Bring new people to the area Provide local community attraction and access to the beach for kids
Enhancement of facilities in local area. Tasteful design that adds to the landscape
To help the project be successful, it also needs to be significant enough in size to draw attentio
Utilising the unusable area that the additional length of the pool will take up. The pool will be massively occupied during the summer months and the larger size will assist in keeping occupants at an acceptable social distance. The value it will bring to the hallet cove and surrounding suburbs.

Sufficient size for residents and visitors and will support local business
Enough space for the users Protection of the embankment It being a sea side pool
Larger pool that will satisfy leisure and competitive swimming as well as making good use of a current unsightly unused rocky outlet, whilst providing a larger area of embankment protection.
Size of pool
I like that it's the bigger option. It'll be less crowded. It'll be good for Hallett cove.
Big enough for numerous people. At the moment beach is basically inusable for swimming. Smallnpool for younger children.
larger dimensions will cater for more people visually appealing enhances usability of seaside
Nothing
Larger size Location Ability to use it for events
Both
Bigger pool Coastal erosion protection Kids wading pool
Environment protection and a good sized pool
Pool at local place
1) safe swimming place for all ages in a sustainable way, 2) well designed - looks good and functional 3) brings amenities to Hallett cove and potentially increases commerce in local businesses
Nil
I love the size and design
Looks great,summer evenings would be great
The way it is parallel to the landscape. The size as I think it'll be popular
Largest pool size can accommodate more users.
Great for all ages. Great to have a decent swimming area on our doorstep.
Big tourist attraction
1.Great for lap swimming training 2. Lots of room for many people to swim leisurely 3. Fantastic utilisation of a large community area around the beach area
Similar to Bondi pool which everyone loves
I like the 50m pool
Looks very immersive More room for people to swim and do fun activities Will attract more tourists
Big pool.
Location, large size for all to enjoy
Size
50 meter swimming pool Location Embankment protection
Impressive design. Amazing pool to use regularly

I would love a 50m pool to swim in. Good for encouraging outdoor activities. Great location for the community
Larger pool Orientation Pool running parallel to foreshore
50 m swimming length
Large pool so many people can use it. It looks very attractive. It will enhance the whole area. I can't swim in chlorine, so this would be a way I could use a pool without the chlorine
All
50m lap swimming for fitness and possibly the reactivation of Hallett Cove surf lifesaving club
Kids would be great for our young family
50m full sized pool.
It's the biggest May as well prepare for future with larger populatio
a pleasant swimming area
The size of the pool - the community is growing and a smaller pool would be crowded I believe. Accessibility for more residents at one time The option for the sporting community to train in
More area in case of crowds in Summer
Plenty of options
1. Large enough for multiple uses. 2. Transforms the landscape to a more user friendly environment. 3. Allows more swimmers/beachgoers to be included.
The length of the pool will provide room during peak times and seasons. It looks structurally sound. Will generate more activity in this area.
None
enable swimming for a number of usersunsure
The size of the pool
The orientation along the shoreline. That is uses the whole of the embankment support needed. Fits better in the curve of the Cove
50m pool - from Sydney and the seaside pools are awesome but the short ones are no good.
Size of pool
The pool design Embarkment protection
50m pool Summer recreation Good for grandkids
Salt pool Fits in Protection included
Provides more opportunity for casual swimmers to use the space, makes the time and investment worthwhile and it is more beneficial to serious swimmers.
Nothing
Ideal for fitness and children's activity. Big enough to accomodate many people and not that much more in cost compared top the 25. Also aesthetically more pleasing.
Too much money for an outdoor sea pool. We have an outdoor pool at Marion. Shuts down for 6months as not profitable. Think this is a huge amount of money for something only a few will use.

Best option, larger pool & better looking
It's a good size It's right on the beach front It's in a great location Good to also have children's pool
It utilises the stoney section that nobody uses It is a great design.
As the seaside pool would be a populr destination, option 1 would be the best size pool to accommodate many users.
An excellent sized pool. It will be very popular therefore needs to be a decent size.
Size of the pool, makes the beach useful, the tourism it would bring the area
Dont like going in water of rocky beach, fixes that. Can swim laps w 50m pool. 50m means more swimming space in case it gets crowded.
Larger area for a less crowded use. Better for lap swimming
Not applicable
Strong community requirement for such a facility. Note when this was explored in the '90s Council initially supported the concept but were advised of potential liability issues and withdrew support.
Swim in salt water , shark safe
Size Appearance , cost
Large pool Childrens pool
N/A
Size of the pool. Especially on a hot summers day.
Good for locals on a warm day to have a swim.
Attracting people to Hallett cove A place to swim in Hallett cove Swimming in a 50m pool far better than a 25m
Design concept Environment protection
I like the size and the layout of the pool
It will be great for the area The size of the pool
- Good size pool for swimmers so it's not too cramped - 50m allows for swimmers to do actual laps - kids pool
Design Use of space creating a usable area for residents Size
Room to chill without being in the way of lap swimmers. Looks. Making the area more of an attraction.
The proposed design is sympathetic to the local environment It would provide me with a free swimming option more readily accessible than existing beaches and swimming pool in suburbs around Hallett Cove The length of the pool makes it more attractive for lap swimming

Fits the space well. I prefer to swim in a 50m pool. Capital/Ongoing costs not much more than the 25m.
Will attract use by residents & visitors. Is big enough that potential events could occur there, stimulating nearby businesses. Increase opportunity for healthy lifestyle
To big a project
Place to go swim,
Excellent for lap swimming Provides opportunity for less “traffic” in the pool than 25m option Accomodates all important things - embankment protection, wading pool and lap,pool
Possibility of larger events, competitions etc. Greater capacity for growth.
Good size pool to accommodate the local community and visitors to the area. The potential to attract tourism. Boost to local businesses.
Just makes sense. Plenty of room for people to engage
Size of pool and layout
I don't
An exciting development for the area. Utilisation of beach area that is otherwise not user friendly. Encouraging outdoor activities in the community.
Size
Size Sustainability by protecting what’s around it. In keeping with what is needed for the area.
A natural swim Pool for residents and visitors also being able to use all year round winter swimming is good for you don’t have to go to pool and get into chlorinated water
Pool size possion more room
Capitalize and maximizing upon the potential of the area - getting it right first time and ensuring a grand design realized on our local beach for people - both residents and tourists to enjoy for a long time to come.
The pool size allows adequate space for all to use. Embankment protection in place
That it is 50m. It fit nicely in the cove.
Easy public access to community pool without obstruction of view of natural sea beauty.
Size
size of pool embankment protection makes the beach swimmable
large pool area, embankment protection and enough room for everyone
Safety from sharks who have every right to swim net free in the ocean It will be perfect there and bring business to the south especially local shopping centres That it's big enough to do laps and share with the whole of SA as the only other one we have is in Kangaroo island. I Think we should have them all along our beaches.
Big pool. Save for kids to play
Full size lap pools, children’s pool area, and protection for coastline.
Has it all.

Size Design Location
Allows for growth of popularity
Size for plenty to use Scalability Appearance
The size allows for future growth in use Inc population increase. The size feels right with the appearance of the beach I love the protection it offers as well.
Additional length of the pool Waddling pool
Adding a extra 50m swimming facility to the southern suburbs. Marion indoor has poor hours for the 50m specially during school holidays. Noarlunga Centre closes 50m during the day. So a extra 50m facility is much needed.
Room for more users and seems a more sustainable for the long term
I am a swimmer so the 50m length for laps is appealing
Due to its size would accommodate more residents
The size. Hallett cove beach is busy as it is with the board wall cafe and playground, seems pointless doing one that's small. Plus this is the only one around so there will be people travelling from all around to come.
Large area. For everyone to share. Its protected and looks good
The size would be beneficial as more people would be encouraged to use it it provides a safe ocean space for people and families to swim safely without worry of rips or marine life The embankment protects the foreshore
Large size of the pool - it will be very busy, so the bigger, the better!
The entire concept. Safety for swimmers Protection of environment Location
Children's pool and the probability of hosting competition events for the community.
It's the most sensible. Plenty of room for a large crowd on a hot day
50 m sea-pool & embankments & were it is going to be built
Safe recreational activity; No requirement to create a very expensive high maintenance beach area (ala Glenelg) to enable residents and visitors to enjoy the foreshore; being a tidal pool - minimal maintenance and ecologically sound.
Hallett Cove beach/park area gets very busy. The pool will be a huge attraction. If it is too small it will be too crowded. The big option is the best option.
Provision for young children and toddlers.
the design, location and size
Bigger pool for swimming better use of land space why do things by half
Impact on environment
Would add new recreation opportunities Creates a space for young families with children May be able to hold small community events in the space

It is a safe swimming spot It is protected from storm and adverse wave action It is large, in midsummer it may attract large numbers of users
Although we are in Sheidow park (looking at moving to hallett cove in the new year) we are only minutes from this beach and frequent the reserve and boatshed with our 3 kids under 5. This would provide a space for the kids to swim without going down the hill or further south. It would attract people to the area and hopefully businesses would fill the local empty shops at hallett cove. It's a unique idea and there isn't one in Adelaide yet.
Allows maximum use by people
Would like to see a sea side pool at the beach.
1. The seaside pool! 2. Embankment protection 3. Good for tourism
It's natural, inviting and visually appealing.
Larger pool, the bank protection, and the proximity
better value for $$$ larger area for influx of visitors to the area Also go bigger, never smaller, it will get outgrown
A 50 metre pool will encourage swimming/squad training It will allow a greater area for recreational swimmers over the hotter months The embankment will protect the beach from further erosion
Larger pool. Nearby parking improved view to a largely unattractive beach
better usage of the beach location for swimming saving the beach from further damage
The 50m pool for laps, smaller pool for other users and the possibility of capturing some sand back onto the beach
That the pool may be too big and therefore under used
I think it is the best of the options being considered.
Sits well on the site. Larger capacity. Storm water outlet diverted
50m Pool
A 50mtr pool could be taken over by swimming groups for competition and other reasons.
I like the natural stone wadding pool. That's it.
Size. Wading pool. Embankment enhancement.
It will be good to be able to swim in a good length pool in at the beach, without have to try and walk across rocks to be able to swim.
Pool size
Opportunity for revenue from events to support the Project. Minimal cost difference for double the size. Potential opportunity to split off into recreational vs lap swimming.
Good size for family fun
The pool *size and layout* is more *beneficial to a wider variety of use* and *projection into the future*
Nice and big Design Location
Large size and functional pool. Clean appearance fitting with the surroundings.

Exciting development Community utility Fantastic for kids and adults
It's the best. Always achieve the best not mediocre,
Pleasing on the eye Looking after the Coastline and Environment Easy access for all to enjoy
- Encourages actual swimmers - Won't need expanding
Bringing the local community together and create another gathering/meeting space for families and walkers adjoining the Hallett Cove Boardwalk bringing tourism into our suburb. Plenty of lane space in the pool for community lap swimming so there is no lane rage amongst swimmers.
Good addition to the beach front
Can be used by a lot more people, spend the extra bit of money to get a far superior option. Only one chance to get this right.
The size of the pool is great and enables lots of people to use it at one time embankment protection looks good as well
Better for fitnes more people can use the pool at once if it's going to be done do it properly the first time, maximising the the space for long term use
Big pool and kids paddle pool. May as well make it big.
Big Good for lap swimming
Kids Pool and protection from erosion. Not that much more expensive than the 25m option
It's bigger for more uses, less cramped
-how big it is -the design of it -The location
Size, child pool, embankment protection
Size Environment protection Minimal visual impact
Nothing
Allows lots of users Is impressive to look at and would make a statement The location is ideal
playing with my kids kids swimming
size, position, appearance
Space without overcrowding. Childrens wading pool and coastal erosion strategy
Bigger pool for people to use, protects the bank and will bring vibrancy to the suburb
The size
1. Big enough to accommodate current and future demand 2. Disabled access 3. Blends into surrounds
will be where i would swim almost daily convenient no sharks
Option for serious swimmers to use the pool
Full length lap pool. if you are going to do it, do it right.

Nothing I hate it as a concept
Would be able to use for all swimming abilities. Looks great, very impressive. Something SA needs.
It's big with plenty of space. Better location Great family fun
Size Location
Pool size Erosion considerations Kids pool
1. I like the fact that the length (50m) is the same as of an Olympic pool. This will allow people to train for competitions. 2. Great opportunity for competitive events (as stated in community newsletter). 3. This will be the only seaside pool in Fleurieu Peninsula, a 50m seaside pool would be a very valuable addition to the coast and community.
Bigger pool as this will draw a lot of people to the area. Such a great use of the space. Love the addition of the wading pool and seating.
Greater size for more capacity Lap swimming ability Competition possibility
Large size
The size of the pool is of a decent size and the layout is more attractive.
ease of access, like the larger size, provides a safe swimming area for all ages
embankment protection
Natural rock floor, size of pool and child's plunge pool. A great way to protect from natural erosion too.
The size of the pool and the Childrens wading pool.
The size of the pool allows people to use it for what it was meant for - swimming. Looks good. Blends in with the surroundings.
Larger pool for more room
1 Plenty of room for many swimmers & disabled to keep healthy & fit at the same time & socialize together in our local community. 2 A peaceful Central location by the sea for easy safe access away from main highways for the local community. 3 A convenient location for students in nearby schools & families to learn how to swim - train & compete in State swimming competitions. We have spent most of our lives in Port Lincoln & have seen the results a good pool makes for the whole community. Including Royal Life Saving training & producing top state swimmers including an Olympic Gold Medal Winner. Chalmers & other top swimmers as well as keeping the oldies active & fit.
Access swimming in our local area Perfect for kids and young families Hallett cove great area for family recreation
1. To be able to swim in seawater. 2. Good size 3.Eazy access

50m ocean POOL will put Adelaide on the world map. Great place to visit and swim. Will be great for tourism
The access to a safe and secure 50m seaside pool. Located within my local council. Great opportunity to introduce young family to the sea.
the length of the pool for swimming people wont be on top of each other, lovely design allow families and people of all ages and disabilities to participate
Functionality Aesthetics Location
This will be a very popular facility, and would require the larger pool to accommodate the public
1 pool size 2 access and seating 3 embankment protection
Bigger pool Making use of "dead space" I do not believe that there will be a huge negative visual impact
Large size, wall around pool, close to home
Area to be protected is larger by way of a larger pool, more seining area and longer laps in pool. Approx price is similar for twice the size.
1. good for children 2. improve living environment. 3. improve local businesses
Size would cater for many people Useable for competitive events Childrens pool
Looks amazing, great idea and will bring lots more visitors and tourists to Hallett cove
Lived on Sydney beaches before moving to Adelaide. The coastal pools usually 50m or more are well used and loved. Having a pool at Hallet Cove to swim in and particularly after walking along the coast would be wonderful. It is also an outstanding attraction having a 50m or larger pool, the conservation area and the coastal walk when it's reopeneded. The only detraction of Hallet.Cove is it would benefit residents and visitors if it had some shops that sold groceries etc..that residents have to get into a car to go the shops is not good in any way.
size, position, protecting the embankment
50m pool is a much better option in my view.
I just feel people will accept it once is there .I like the idea of the wading pool for the little ones .
children pool, natural rock floor,50m seaside pool
Size of pools, access options, blend with existing landscape.
Local incentive Makes the most of a good location Looks after the environment
Sizing and layout of pools, options for completing laps in pool, children's wading pool would be great too
Do not support
Children’s wading pool Slow step into 50m pool Olympic sized pool for recreation use
50m is required for fitness & also training for a swim club. Better for attendance numbers
Size to accommodate more people comfortably

great design. practicable. popular.
I enjoy lap swimming and a 50 m pool is my preferred option for swimming. I also think if erosion control is another consideration, a 50m pool would be more robust than a 25 m. I thought the illustrations of the 50 m pool were much nicer than the 25 m pool.
50m pool is a good long term investment and adequately ensures coastal protection while being large enough to service the general area and provides space for kids pool area
Size of pool to accommodate users. Accessibility. Family friendly, children's wading pool.
I think it might be better to build the larger pool as our population in the area will surely increase and probably cheaper in the long run to build the larger pool in the first place. Probably better to have larger embankment protection. More people will enjoy the larger space.
1. Hopefully nice to use in summer months 2. Adds to the prestige of the area 3. xxx
Most beneficial to community There is enough space/area for a pool this size
At this stage it isn't a reality
Good size pool, kids area looks great, something my kids would enjoy using
Good for disability access Increase of customers for local business
Length suitable for training
Plenty of space for many to use this pool.
Nothing ~ do not want a sea side pool
If we are going to do this do it big and do it once correctly...no more half jobs that we seem to do
Bigger pool to accommodate more people. Great idea to have a seaside pool as we have ypung kids & feel safer & mire protected in a seaside pool than out in the ocean. Can't wait!
The size, access pathway, and children pool
Full size pool appeals to more users and provides more space, less chance of being overcrowded. Makes the area usable without really detracting from the natural aesthetics of the area. Seems a waste to build a half size pool when the capacity is there to build a full size, especially considering the negligible cost increase.
Safe lap swimming Safe child water activities Non chlorinated
All of it. Excellent. It would be silly not to have it bigger as lots of people from all over will be coming. My Daughter and Grandchildren will be coming.
Larger pool allows for more users (reduced potential for crowding) 50m being standard length for health / fitness enthusiasts Only a minor increase in costs from 25m option
Love the embankment protection, will be a great sized pool
Aesthetically is the most pleasing, and would be excellent to be able to swim 50m laps.
Provides for more community use/capacity. Is more cost effective than option 1. Makes sense if you are going to do it, don't half do it, construct the complete best facility the first time, otherwise likely to have to expand at some future time to meet community demand, at a much inflated cost

Nothing
Being a longer pool it will attract more swimmers and have more room in it for others to enjoy.
Length of pool
I like the long pool The layout of the pool
It would be fabulous to have a seaside pool for residents (and/or tourists) to enjoy. This pool is large enough for all people to enjoy without feeling 'clostrophobic' and the overall budget is not significantly more than Option 2.
Will be able to swim at Hallett Cove Beach. Area for children. Raise home valuations in the area.
large 50 metre pool for lap swimming safe childrens pool protection from coastal erosion
Nil
Convenience - accessibility to nature pool within 5 mins away from home. Free of charge - no entrance fee needed to enjoy outdoor swim
if we have to have a pool this would be the preferred option
Salt water 50m beneficial swim. Fresh sea water and location. Safety.
The design
The area lacks water activity due to the rocky beach. This would be a great compromise
It represents greater value for money, will provide more space for people to access and use and it is far more aesthetically pleasing than the other options.
A big pool and a great place for the kids to play Great for the beach Awesome to go for a big walk and then swim
It has a nice variety of people would like to have small swim and to have a nice relaxing place or for kids to enjoy
Larger size is better for actual swimming and to provide more space for multiple users.
50m Pool, Coastal protection, toddlers pool
It's great idea for familys in summer but the car parking is something that has to be looked at first as it's already horrible finding a park down there without it, will become very hard for familys that take small children to the park regularly. Parking on grand central is not realistic it's a steep hill that a lot of cars struggle with and banking cars up by parking on the street will cause so many issues for residents
A good size which is required due to how popular it will be. It will draw tourists to the area. Will increase local business revenue.
It is not a piece-meal gesture, If were going to have one lets make it worth having ! It addresses the embankment issue. It will accommodate more people than the smaller one.
1. It looks visually attractive as it fits better into the shape of the bay 2. Better length for swimming laps 3. Pool protects full 90m length of embankment
Large, will bring more people to the beach, tourism
Length Can use all year round Free
Provides a draw card to the suburb which hopefully helps local businesses and house prices.
Larger pool good embankment protection

Larger pool to provide large Hallett Cove Sheidow Park community and for lap swimmers
Bigger the better
Encourages recreation and people to undertake outsides activities Sympathetic design to the natural environment
Provide safer access for all ages to swim at Hallett Cove Beach. Will divert storm water to support healthier use of the beach. Will be a fantastic complement to the existing recreational facilities at Hallett Cove beach to promote use of the coast /outdoors for local residents and guests from further afield, noting easy access to train.
The larger size is the right one. The position means pool can be used in a broader range of surf conditions. The location fits in with the contours of the beach.
50 m pool for lap swimming
Fitness / lap swimming potential Cater for more people Aligns with the coastline
Great for swimming Less "traffic" in the swimming lanes Great place for leisure
The pool is nice and big for everyone. The pool is pleasing to the eye. It will be great to have embankment protection.
I like that it is big so in summer there is enough room for everyone to enjoy. I also like that it will provide a place for hallett cove residents and others to swim as the beach currently is very rocky and can be difficult to navigate. I like that it has embankment protection.
Size of the pool
Seaside pool, wading pool and Rick pool
Size of the pool - need to plan for the future so the bigger the better. It blends well with the surrounding landscape.
larger pool to allow more room for possible large numbers of users,,,parallel to beach;;,possible competitive events
Everything.....plenty of room for everyone.
Make the beach easier to swim
all ages will be able to use a larger pool
Opportunity to swim and spend more time at my local beach. I don't have to travel to go for a swim Opportunity to have a ocean pool in Adelaide
50 metre pool.
great tourist attraction, protect the coast line and encourages healthy lifestyle with swimming exercise
Maybe too large smaller 25 m may be better
Size of the pool
We having a pool is a must for me
Size Location Design
I have always said a pool would be amazing here.
Brings the community together. Great size pool for everyone. Fantastic tourist attraction

Good for lap swimming. Fun for water play. More spacious.
good for lap swimming plenty of room for kids to play more space
Olympic length, dramatically improving mental and physical health/fitness, more room for swimmers, the room is available at the beach, overwhelming amount of young families that own there home in Hallett Cove resulting in a large amount of ppl using the pool. More ppl using the pool would increase foot traffic through the conservation park promoting Hallett cove and the a significant increase to small business being the cafe.
I think the pool needs to be a decent size if there is going to be a large amount of money spent on the project. The bigger the pool, the more people can enjoy the space.
the size and the look are welcoming. a smaller pool will become over crowded quickly.
1 Children's shallow/wading area with natural rock & general size of pool. 2 If adding this infrastructure the larger size is much more appealing for a growing and increasingly popular area, not to mention a greater chance of use of the pool and public space in general if people know there is accessibility and space (especially for busy times of year). 3 embankment/environment protection
Large pool Nice aesthetics Blends well with the environment
NA
Suits both swimmers and kids It's location or position Ease of access
Size of the pool will attract more people and won't be crowded.
Larger pool to cater for more people
Size is right, needs to be big as it will draw a huge crowd in summer months
A great size for a community asset, also looks very family friendly and stetches along the space so visually appealing.
Design, plan and embankment protection considerations.
The larger pool gives more room for more people to use the pool. As the beach there has no sand like sea cliff it needs something more user friendly so the larger pool would be better and draw more people to the area.
N/A
Adequate size for a growing population making good use of the rocky beach whilst still maintaining the aesthetic of the beach.
Makes use of unusable swimming beach. Good size for exercise and training for competitive swimmers
50m pools are much better for swimming laps, which I do regularly.
It will be such a drawcard to activate Hallett cove in a healthy natural way
Modern, room for more people, will be a tourist attraction
good size for groups to use as well as individuals large beach space with difficult to use beach due to stones good long term
Larger size looks more appropriate.

Protection Design Usage
Size of pool is good and it looks to fit nicely into the surrounding landscape.
Transforms an area of the beach that is otherwise of limited use.
Design Use of space Preservation of seawall
More pool length for laps Kids pool The pathways
What an amazing addition to the local area! Finally there would be a seaside option for swimming at Hallett Cove! Please don't do the 25m option. It will not be big enough for the amount of people wanting to use it and for only a fraction higher cost, you can get a much bigger and better option! I know it is the South Australian way to try and cut costs and half deliver a project (think one way expressway and the adelaide oval footbridge that can't cope with the adelaide oval crowd), but please people, have some vision!!! Do it properly and do it once!
If money and time is being spent on something I know will be popular. I think its worth making it large for everyone to enjoy.
The size of the pool is decent
It will be great
Tourism opportunities for the area. Great space for longer distance swimming, draw card for the state
If we do have to have one, 50m is much better than 25m.
Will be popular so provides more area for swimmers to enjoy the pool.
that it is easily accessable
1 Bigger pool size to attract a higher number of People 2 limit over crowding 3 good utility of area
1. Can swimming laps 2. Big enough to fit enough who wants to swim
Big enough for what I believe to be a very popular sea side pool. While spending money let's do it properly. I fully support the wading pool for the young kids. Very family friendly while supporting the protection needed for the embankment
Greater benefits for more people due to size Greater embankment protection options
Larger pool allowing more chance to keep fit and swim safely More space than a smaller pool allows exercise and family fun
50 metres is the only option for regular swimmers. 25 metres is a wading pool. I would still go to Marion if it was 25 metres. But the whole idea is preposterous. It was a boat ramp. It kept getting smashed by the waves. Leave the beach alone. It has natural beauty. Stop messing with it. It doesn't need improving.
Size of pool Design is better Can accomodate more people
Good size pool, wading pool, embankment protection
The size, design and functionality

Pool, kids pool, size
None of it.
Local swimming great for families
It makes use of a somewhat unusable beach
Utilises the whole area which is otherwise useless space
I will be so much fun for kids and adults
Safe swimming for residents and users, increased amenity 50m pool better than 25m pool because the additional cost give a facility twice as large, and a smaller option may be outgrown
Enough room for fitness swimmers. Enough room for leisure/casual swimmers. A set area for young children and families.
Pool
A full size pool increases its practical use for community groups, schools, training etc.and for holding public swimming events.
1. built with nature not against 2. plenty of room for experienced swimmers and learn to swim groups 3. helps to reduce coastal erosion
nothing
Additional room for adults who are not regular 'lap swimmers'.
My wife and I love the idea of a large pool being constructed that will allow lots of people to swim at any time. Also the cost is not that much higher than for the smaller pool so good value for money. We strongly support as much amenity in the Hallett Cove area if it is sustainable so community interaction , fitness etc is maximised. It is great that Marion Council are proactive in providing parks, walking trails etc in our community.
Being able to swim at Hallett cove Safely a pool is more usefull than a seawall a pool will add to the other amenities at Hallett Cove Beach
That it is parallel to the coastline and will be able to be used by a larger number of people simultaneously.
None.Ashamed and disappointed COM has gone this far. I for 40years on Coastal walking trail, HCConservation Park. Field Geo Club of SA and other bodies have worked hard to protect this part of SA'
Amenity for local users Focal point for community Increase active use of foreshore
People will use it for beach swimming and safe then open water
50m pool Placement Embankment protection
The scope of the project. The future proof aspect of this option. The flexibility the larger pool gives.
The 50m size of the pool, can be used for competitive swimming and events, good size to accommodate many users during the summer months, this will greatly benefit the economy and could help with tourism. Also doubling the size of the pool has a marginal cost impact so go big!
Long length for swimming laps and also embankment protection
The concept in general The kids pool The shore/erotion protection
Its overall appearance, how well it integrates with existing natural and man-made features, and its size which affords greater flexibility for the maximum number of users.

Good size to accommodate many swimmers. Good appearance Embankment protection
Great community resource for so many reasons mainly local sport
Lovely concept, larger size to cater to more people.
Size ,accessibility, location.
Hallett Cove needs more people coming back to the suburb and this will put the suburb back on the map again. Need a bigger pool as the demand will be there. The protection will stop the erosion.
Nothing
Big pool, kid area, erosion protection
It will make the beach more useable It will be a great way of entertaining children in the open air It will encourage people to stay fit
Larger pool
The opportunity for the pool to act as a preventative to coastal erosion. The live-botttom of the children's pool and the exterior walls acting as a potential eco-system for fish
Safe swimming environment for children Ties in with existing development. Increased tourism and amenities Increases accessibility to swimming and aquarobics for elderly and disabled people.
Caters for wide range of community, disability access, best size for anticipated strong demand for adult pool
Large pool, will draw lots of people to the beach and will be good for local business
Can be used by schools, community sport clubs (for events) and also general public for daily exercise and recreational use
All that is included in option 1
Enough space for all to enjoy Tourist attraction Useful for community
The size will enable multiple user groups simultaneously
The full size pool Unique way to visit the beach A sheltered, less rocky option for swimming here
Great idea for residents and tourists plus protection of the coast
Size of the pool, use of the area
it will look good
It would provide sufficient swimming and family space to make up for the lack of beach and swimming space in the sea in this area. It would enhance the appearance of the beach and provide a wonderful safe facility for families and in fact, all age groups.
Utilises unusable and less attractive part of beach. Modern, minimalist design, blends into surrounding landscape Separate children's area
A place to swim safely at Hallett Cove, A pool big enough to swing properly, will bring people to the area.
Somewhere to swim at Hallett cove beach which is safe Attract more people to Hallett cove
It's a natural inclusion to our existing coastline. Somewhere awesome for my teenagers to swim in summer, they need lots of room/space. It's beautiful and functional.

1. The size opens up possibilities of large professional events equaling greater exposure to the area. 2. Pool size is good for large amounts of people. 3. Great use of Hallett Cove beach area, as the current beach is hard to use for swimming
Lap length pool, children's wading pool, further development of already nice area
None
Sustainability Looks great Should be fun!
seating arrangement to watch children in pools embankment rocks type and colours path walkway refilling of Water from ocean
It would be quite popular so the size is good.
Swim more often
Design allows better use of area Future proofing
Somewhere to swim at hallett cove Attract more people in summer
Somewhere to swim safely
It blends seamlessly into the existing landscape and compliments the current rocky geometric surrounds. It's is value for money as the incremental cost to build a 25m versus 50m is well spent (learn from the single one way southern expressway that when finally duplicated 10 years later as it should have been in the first place, cost well in excess of if it had been built to future proof to begin with). As Hallett Cove continues to grow (current residential proposal for southern part of Cove Point to be developed into several hundred homes), the pressure on a facility such as the beachside pool will increase exponentially so it is better to build that size now and future for many generations to come.
It will provide a safe place for residents of all ages to swim, the proposed pool is a decent size, it will benefit the environment by protecting against erosion
1. The size of the pool 2. We need these down South 3. Good design
Big enough to sustain a large popularity, which will happen once built, like Bondi in Sydney. Silly not to go ahead with this plan and put Hallett Cove and the Marion council on the map!
The improved access to beach
Best for fitness swimming, and large enough for young family activities. Can be used for Surf Lifesaving event competitions. Best design for environmental enhancement and pool maintenance - water flow etc.
Health benefits to the community. Protection of coastal erosion. Tourism to the local area. This will help local cafe, shopping centre and coastal walk. Amazing health benefits across all ages.
The size, it won't get over crowded if it's larger.
1-Gives more swimming options. 2-The cost to have a big pool is not materially different from having a mid size pool. 3-Unique addition to Hallett cove on not just state level, but national. Way better than Bondi's pool.
Enhanced Recreational Space: The 50m seaside pool provides an inviting and safe space for swimmers to enjoy in a stunning coastal setting, encouraging physical activity and recreational opportunities for locals and visitors alike. Increased Coastal Resilience: The embankment protection associated with the seaside pool helps safeguard the coastline against erosion and storm surges, preserving the natural beauty of the area and protecting nearby properties and infrastructure.

Tourism Attraction: The combination of a seaside pool and embankment protection creates an attractive destination for tourists, contributing to the local economy by attracting visitors, supporting local businesses, and boosting the tourism industry.
The size of the space and relationship to the playground. It also utilises a large area of a fairly under utilised space.
great community facility ,, very natural looking,, enhances the area
Size Something different Promotes use for everyone
Pool size Design Environmental impacts
That it has a 50m pool, embankment protection is provided and the children's wading pool is included.
Better to go for the 50m to allow for future growth in the area
All 5 advantages set out in the report, as well as the option that aging indoor facilities, or options to build new indoor facilities can be reduced for housing options
In its original condition, Hallett Cove beach is not an option for swimming. This design protects a large section of embankment while dramatically improving the usability of the beach. These options also protect the geo heritage of the area.
protection against coastal erosion
None
Good for swimming plenty of room if it gets busy might as well do the 50m (similar cost)
Making the beach more accessible for swimming, embankment protection
None
Larger pool would accommodate more people. Stepped design for lounging. Sea wall to curb erosion issues. Natural rock finish.
Family activities, attraction to Hallett Cove for increase activity within suburb, fitness
gives more space per person Allows reasonable lap distance Allows end section to be roped off for special use.
Nothing
A pool in general I don't think would be beneficial for the area
Size Design Kids wading
Good size and also protection of the coast. Great attraction for locals and travellers. Healthy lifestyle choices that are accessible.
Embankment protection is ONLY attractive result of this project.
Pool size is better for the number of people it will attract. 25m I don't see as useful.
The location the size and the fact it has it all and a large enough pool to house its needs
I dislike all aspects of Optiion 1.
Is more attractive looking design and makes best use of the space, Twice as big, can cater for more people and does not add much additional ongoing costs. It adds to the livability of the suburb and is a great tourist/visitor option by train or walk in via the boardwalk (they can park in Marino)
Great pool

I am strongly opposed to the construction of any seaside pool at this location. The only positive of Option 1 is the embankment protection afforded in the design. I do not consider there to be any other benefit to the local environment, nor to the liveability of the area for Hallett Cove residents and regular beachgoers, of building a seaside pool at this location.
I don't like anything about option 1 or 2 as I think it's a complete waste of taxpayers money and will have a negative impact on environment
The size of the pool Pool parallel to the beach Storm water outlet design
Size. Location. Embankment protection
None
Able to accommodate more people. Best to do it as best you can the first time you do it.
Planting and enhancing natural environment
If there is going to be a pool it might as well be the bigger one.
Great for lap swimmers like myself.
This is a significant geological & archeological location & this proposal will destroy it The bridges on the boardwalk have been in disrepair for 3 years why?? If the council can't afford or can't be bothered fixing existing structures then why are they looking at spending more money they don't have on destroying this beautiful location
You need to complete the job properly Adelaide for too long has half arsed so many things, a 25m pool would need people to swim one direction in the morning and the other way in the afternoon. A great way to keep fit and make use of a resource. Talking point to add value to a great Suburb.
Large pool to provide enough space for visitors. Considerate storm-water outlet. Effectively deals with different surf conditions.
do not support
It is a realistic size pool to share with the community and best value for money. Best orientation for the pool. Aesthetically better.
Adults and children will benefit from pool. Looks great! Will attract more people to hallett cove
It will provide a safe swimming spot for the community
Will be great for the area, they are great in Manly
It is the same size as Bondi Baths and think there would be greater use to validate the project.
Size is great - go big or go home!
Permits competition Great 50 m lenght Includes coastal erosion protection
Nice big sized pool Sticking to embankment protection Will bring a lot of popularity to Hallett Cove
1. It's not a half hearted development. 2. It definitely something I would use 3. A real asset for our community.
I think it's a better size moving into the future and makes the beach usable to people who want to swim
Nothing
White elephant, not needed

50m More attractive Blends into environment the best Ramp access
Larger pool will mean more space for swimming
Nothing. This project will not benefit the majority of Marion council rate payers.
1. The bigger pool means that more people can use it at the same time. 2. The bigger pool means that there are more things you can do there EG. Laps etc. and gives gives residents a area where they can swim on a beach that is not really 'swim friendly' 3. It makes better use of the space available and fits in well with the existing landscape.
More room Improves coastline view
Recreation opportunity House value may rise
Lap pool and leisure pool Finally able to use hallett cove beach Brings interest to the area
The size of the pool, giving plenty of room for more people
Large pool will accommodate more people
Love the bigger pool, allowing more users. Embankment protection is much needed. So excited to be able to use this!
Nothing
I love lap swimming so 50m is great
1.Location 2.The length of the pool - for lap swimming all year round. 3. Hopefully it won't damage the beach and the embankment protection will do its job.
Pool size, positioning and kids section
1. Permits pool to be used for competitive events 2. Orientation and location allows pool to remain in use through broader range of surf conditions 3. . Includes a children's wading pool with a natural rock floor The cost between 1 and 2 is negligible in the grand scheme so if we are going ahead with this, let's do it right the first time.
Pool Child's pool Builds community
Layout across beach, 50m standard sizing, looks complete.
Size of the pool, allowing a large crowd at once. Design look seems neater and more fitting than the smaller pool.
Making swimming and use of the Hallett Cove beach more palatable at the moment we have to go to seacliff Brighton or Christie's on hot days. It supports the community A nice safe place for the kids to play in our community.
I like the fact that the main pool, being 50m long will possibly appeal more to serious swimmers rather than people who want to just park about.
Friendly swimming area More substantial protection, and encourages beach use Seaside pools have been missing from.. adelaide for far too long

The open-air swimming facility would serve as a wonderful opportunity for families in the summer as well as a possible winter swim club, or even night swimming. The position of the ocean pool along the foreshore. Partial protection from large waves. A well-defined space for training and practising.
Increases the appeal of the area, family friendly, more activities
I think that it will make the area a better place to visit especially with having grand children
- This will allow more locals and visitors including children to swim at our beach in a protected and safe area - Bring more people to our beautiful area and promoting what Hallett Cove has to offer - This will also allow our swimmers to be able to train in an outdoor Olympic size pool
This is the better looking pool for the eara as well as providing for a large number of people to be able to use this great for the south and surrounding area
Make it as big as possible.
Bigger pool. More room for more swimmers.

What 3 things concern you most about Option 1 — 50m seaside pool and embankment protection?

Visually ugly Traffic and parking Ongoing cost
lack of changerooms & associated facilities
Pool use limited to summer months only - wont be used in winter
No enough car park for swimmers.
Nothing
Parking - none, most walk the track or public.transport ie train Cost - happy to support through rates Environment- beach has been trashed over past 30 years or so. At least we can utilise and care for coastline in a metro area.
Extra cost
Noise from pumps used to fill the pool. Car parking. Lack of bike lanes leading to Hallett Cove beach. Extra traffic will lead to greater unsafe conditions for cyclist.
Nothing
My only concern is the potential lack of parking.
it may be a little to big will the tide rise enough to keep it clean all the concrete
Ongoing cost. Ongoing maintenance. Not really going to be used in the colder months.
Impact on the environment/amenity, ongoing cost to maintain, issues around parking.
People occupy pool that want to do laps in a more professional manner that might disadvantage other users No other concerns
Parking may become a problem if the area becomes popular
nothing
People
i'm not educated enough on environmental issues, but I'm assuming that in general the 3 options would all have similar/same environmental impacts - positive and negative
Nothing
The disruption and possible waste from Construction
I do NOT support any type of swimming pool being built at HCB
Nothing
None
The complete lack of community support- only 4K+ people from around 95K? Hardly overwhelming! Embankment protection yes, but not all beaches have to be swimmable. There is a rich history here in the Cove and meddling with the rugged beauty of it, yes helps to make it be like every other beach in Adelaide. We certainly need to protect from erosion but building this concrete montrosity is not the way.
Popularity could cause potential parking issues.
That funding is still unknown, speed limit on Gran Central Avenue

None
The cost.
It's an eyesore spoiling a natural and unique cove . Traffic parking is already extremely hard on most days and weekends. Money better spent elsewhere
It does seem a bit large
Nothing. It would benefit a lot of people and businesses.
Not Applicable. I see only positives for the community.
Not everyone can swim a 50m pool. I feel 25m would be best suited
Parking
Amenities such as drinking water, toilets and bbq and social areas exist, possibly a changing room could support the build, but infrastructure such as parking should be increased, if possible.
Provision for car parking Safety of swimmers After hours access
potential lack of carparking spaces and seating / shaded areas for the amount of people it will attract.
Not suitable for that area and not enough parking
That negative people in the area are complaining and it won't happen.
Too large
Just need to ensure enough parking is available
Street will be busier Parking will be an issue The cost of upkeep will be passed onto rate payers
Storm water drain Toilet facilities
Cost for residents, parking and environmental impact
Parking, maintenance and volume of use
Getting shut down like the toilets on Capella Reserve due to damage. Incorrect usage at night.
Cost
None.
1 the pool and the embankment protection will only cause more erosion 2 wait for the decision of Govt re sand replenishment of total coastline before causing more damage
None ... looks awesome, build it
Nothing really... except maybe too many tourists, and car parking.
Whether enough people would support it
Parking
This beach is unique. A pool could be done at any beach. This one is adjoining a conservation park, and in light of this discussion it should have been included in the park.
None
None
The pool(s)
Lack of parking facilities in the area. People misusing the area, rubbish, safety concerns and how the area will be regularly checked and

cleaned to keep it safe for users. Are there sufficient amenities for the volume of users? Toilets, drink fountains, showers etc.
Na
nothing
Nil
Access to the pool, car parking and the surrounds of the pool
Lack of parking consideration Lack of consideration re toilet/ shower facilities
No concerns.. such an inavative initiative.. first one in metro adelaide..
This is unnecessarily large for a community seaside pool when the Marion Aquatic centre is nearby.
Lack of car parking Ensuring water flow Cost
Cost/funding. That is all
Parking
This is an AWFUL idea The beach and boardwalk are so far unspoiled by plastics, mess, consumerism, antisocial behaviour and general lack of regard for natural spaces. I love the area so much that I got MARRIED there. It would break my heart to see gangs of people but treating it as a sacred place that the community has had for years. Perhaps Glenelg or Brighton beach could be further destroyed and ruined? Leave this patch of paradise to the residents who have cared for it for many years. Don't ruin what isn't broken. We do not wants groups of tourists leaving crap everywhere, overcrowding the area (which will take away from enjoyment) and impact wildlife. Have you consulted with the kaurna people? They are the traditional custodians! I want to know what they say. I'm sure they don't say 'Oh hell, yeah build a big pool to bring people in from outside the community, who don't have the same sense of responsibility to the area as locals do). I'm gobsmacked that council would put profits above caring for our nature.
Complete destruction of the intertidal reef Changes to sediment and wave dynamics will cause erosion further along the coast where it currently does not occur Increased potential for litter from pool users will enter the ocean
Cost of building and maintenance, safety
Would also like to see access to sea via a walkway/jetty type construction. This would provide ease of access rather than walking over rocks, particularly to mobility restricted people
I strongly do not agree with a pool structure due parking, residence, and protection of our beautiful little conservation park and rookpools
Soil erosion, size of pool and environmental impact
Parking
The effect on the environment (during the construction of the pool & long term). The effect an increase in people using the beach will have on the environment not to mention the increase in rubbish which will be left. The effect an increase in vehicles in the area will have in regards to parking as there is no where near enough now.
Limited parking nearby may be disruptive to local residents
Bill
See above. Cancel this waste of tax payers money

No concerns if it's designed properly it will be fantastic
None
Deterioration and upkeep
Cost
'- Parking
Accessibility Toilets Car parking
Damage to environment and coastal reef
Huge eyesore. Does it need to be Olympic-sized? Parking availability.
1. Not required as there are so many beach options already along this coast. Environmental concerns. 3. Cost as money could be spent elsewhere to benefit more people in Marion. 4 Maintenance long term 5. Unmanageable traffic, parking, facilities 6. Loss of natural area that people love to visit exactly because it is natural 7. A pool will only be used by limited people over the majority of the year as to cold to swim. Those people are most likely those with money who can afford a wet suit. This is not a facility for all. It is not inclusive. It will turn a peaceful geographically and historically important location in to a over run location and will lose the benefits it currently offers. There are so many places to swim and anyone can go to other locations.
Lack of parking
The time taken to make a decision, the funding won't be approved, the time it'll take to build
Car parking spaces, however I know there are car parks available at the train stations but wonder if this could be expanded or additional parking provided elsewhere?
I feel as thought the 50m pool takes up too much space and covers too much of the tide pools.
Parking availability and arrangements once complete, amenities block needs to be unobtrusive to the view, amenities block needs have sufficient changing room space but also designed in a way to be safe and clean to use.
Parking Business of area on weekends/public holidays
50m can be used for swimming laps
Larger area to maintain, concerns about people not respecting that you siwm laps end to end (ie people claiming one end of the pool for play swimming)
Only concern is the look of the pool in conjunction with the surrounding landscape. I think parking is fine. People will just need to park on adjacent streets.
Parking, access, on site safety/lifeguard
None
Parking Shower/Toilet facilites Parking
Car parking issues
Parking Amenities
People have mentioned it falls in line of a sewerage pipe. Could be a problem.
N/A
Parking
Nothing

I honestly do not have an concerns
shade to be protected from Sun
None.
None
Maintenance. Will it become an eyesore in years to come.
Environmental impacts, public access, costs
'-
None
In the artist impression/drawings both designs appear to have a spike like balustrade/seperation which looks unsafe and maybe for visual appeal, but doesnt seem practical.
None
parking
Security
Car park We live in Grand Central Avenue It's already so busy with traffic it will make it worse There should be some permanent road closure on Grand Central Avenue so visitors shouldn't go through
Nil
None
Environmental impact on local surrounds
Litter and parking
I guess just dangerous waters surrounding and how often the pool will be monitored incase things overflow into the pool
Traffic on Cove road increasing
No concerns.
Parking, locals resident, the waste of money for a small town who have more cold days than hot. It's protected land and tax payers are just wasting money on something that will not be used regularly. It's not Bondi
Possible sand migration disruptions (although Halley cove cas already been de estates by other disruptions down the coast)
It is an historic area and should not change. We should not interfere with the environment. It is a unique area. No money should be spent when there is already a pool in Marion, especially in this economy.
None.
Nothing concerns me
The impact on the natural environment. The impact on marine life. The issues with traffic and volume of people who will impact on the natural environment, and based on other parks in the area, leave it in a worse state than how they found it.
Parking? Noise - maybe? A budget cost is still unknown considering start date is mostlikely 4yrs away. A budget Cost for maintaining said pool is unknown.
Parking space, Safety in pool,
Nothing
Love the concept

Parking Confining maintenance and funding Environment protection
Nothing
Environmental impacts and rubbish Parking issues Cost going up on our council rates
Parking
All things being considered
Maybe a bit big
No concerns
Possibly a little large, but that may be required
None
Parking.. Needs far more parking.
Environmental changes
None
No concerns
Impact on environment, larger footprint
50m is a very big pool. I don't think it would be fully utilised
Nil
Ensuring environmental protection
No parking
Car parking Access Acceptance within community
How to accommodate parking for the number of people the larger pool could accommodate. The lack of change facilities in the concept image. The lack of toilet facilities in the concept image.
1. Spoils the natural beauty and tranquillity of the cove. 2. Will increase traffic volume through residential area. 3. Cost of construction and upkeep.
Adequate parking and facilities. Noise pollution
Only one concern - that additional parking will likely be needed.
Parking - shuttle buses could be made available for the community, leaving the shopping centre and driving to the pool. A small cost could be included with pool entry fee for this service.
Nil
Impact on beach Impact on coastline Impact on street re parking options
None
Carparking. As there is limited parking already around the streets, it may be more of an issue when the pool comes into play. As its the only seaside pool in Metro Adelaide, it will be popular. More bus services to connect to the area - specifically in summer - from the train station.
Proximity and impact to the traditional surf break of Hallett Cove Impact of the project height - 1. if it is too low it will be filled with debris and unusable after each king tide or storm event.

2. Too high and it will impact sand deposit on the northern end of the beach. Car parking is still a concern.
1. That it won't get built 2. We spend another 5 years talking about it
I think this is oversized and impractical to maintain in the long term. The seawall function of the pool is more likely to expedite erosion than to aid in it. I think it will also be an awful eyesore to the natural coast line that remains
We are talking about putting an unsightly, costly man-made structure in a conservation park area. It will attract absolute fuckwits, cost taxpayers millions, and achieve absolutely nothing. If you want to go for a swim, the Fucken ocean is there. Otherwise, fuck off to Marion swimming centre.
Parking Toilet Facilities Shower facilities
No design would satisfy me. Surely scarce council funds can be put to better use!
Possible negative environmental and scenic impacts
It's going to take a long time
Environmental impact Safety to users Hygiene
Like most people, the parking but I don't see it as much of a problem as people can park at the train station
Cost
Coast protection Residents impacted by increased invistors Lack of parking
Nil
Lack of parking at the beach area currently
The size may make watching children difficult.
Parking would be somewhat of a concern. Noting however there is ample public transport nearby and comparable parking to other popular beach locations. The impact of construction to the nearby conservation park. Impact of the pools operation on the surrounding ecosystem
THE BUILDING OF THE SEASIDE POOL IS A COMPLETE AND UTTER WASTE OF MY RATEPAYER MONEY. NOT NEEDED AS THERE ARE PERFECTLY GOOD BEACHES FOR SWIMMING AT SEACLIFF AND CHRISTIES BEACH
None
Parking will be an issue
50m pool
Litter, noise, parking
On going cost to rate payers maintenance will be very high no rostered life saving or safety equipment AED required car parking as the residents will not be able to park outside there own house
Parking
Parking
Too many young people and fast loud cars.
Parking
It's too big, the environmental impact and traffic to the area.

I can't see there being many down side other than increased patronage which could impact surrounding streets
Perhaps parking availability which would then limit access to the pool, Toilet facility.
Nothing.
Moving this design north will still allow this to be functional whilst not affecting the surfing wave, that peels left across the rocks there, which on its day is one of the best waves in the gulf. Please consider this strongly in your planning as someone who has been surfing there for over 30 years, and my father before me. You might even consider adding to the reef to help make the wave more consistent, thus further improving tourism and engagement with beach users.
Not enough parking area
Environment protection; toilet access.
Amount of parking to access pool, changing facilities or shower, maintenance.
Impelementations/availability of water safety and maintenance Sufficient parking, not impinging on local streets A larger pool would cost more
1. Parking availability 2. Clean toilet / changing facilities which is old concrete toilet (please don't put electrical toilet) also safety at night 3. Maintenance of the pool
Need enough car parking. Would require supervision and safety cover for users. Catering services would be needed.
cost
No concerns, I think it a great option
Not too deep I hope
Safety for children/non-swimmers if unsupervised around the big pool. Will tides keep the pool clean enough to not go stagnant and contaminated water. Will there be CCTV to watch for tampering of water.
Funding available Parking space Access
Congestion on Heron way and carpark difficulties. Safety of swimmers and those around.
More area to maintain over time contributing to expensive upkeep and possibly eventually just becoming rundown and neglected
Added traffic
Not concerned.
Nothing really
None
Will there be enough parking to support lots of people accessing this at once, plus increased toilet facilities? Other concern is regarding the impact of increased local traffic.
Parking Safety? Lifeguards? Would locals have to pay fees?
That it won't go ahead
Coast line degradation leave it alone . Car parking streets will be more clogged up come summertime . On going costs of maintenance due to salt water pool pumps . No safety equipment de fiberlator required life saving people
Traffic, rubbish, incidents at night

Non
None
Over crowed area in summertime the bbq area already is used by people outside of Hallett cove . No one is going to use the car park at the train station as per David speirs has said . People are too lazy and will continue to clog the Hallett cove residents view of the sea . I bought this house to look at the sea not cars parked in front of my housel don't want extra signage to stop car parking . The foreshore was littered with signage and the council to there credit and consultation from me agreed that there were too many signs . I know we live in a society of multicultural people but not one Hallett cove resident uses the facilities on Herron way we have music blaring drinking and rubbish bins overflowing on weekends adding a pool will only make this problem worse . I have had to phone the police many times last summer due to music and drunken behaviour
None
Car parking Night time vandals Emergency access
1. Not enough parking. 2. Could be too large for the amount of people it serves if preference takes a beach with sand.
A blot on a natural seascape with a pool, and the fact including the embankment improvement instead of a separate project.
depth of pool
Car parking will require careful consideration Pool water quality will need to be regularly checked Graffiti and litter will need to be kept to a minimum
Sand erosion and the natural flow of the environment.
Mucking around with the natural beauty of an iconic beach
Increased congested car parking, requirement for addition toilets, change rooms etc, possible rate increase
Limited parking, limited area for people to set down near poolside, environmental impact.
No concerns
The pool will be in the middle of the surf break we all green up surfing. This would ruin the wave
No concern
Added traffic to the area, ruining natural landscapes and the influx of additional trouble drivers in the area
Cost
Impact on natural environment Visual impact No mention of impact of rising sea levels on pool only impact on embankment
No concerns
Environmental impact if any. Cists of operation e.g., pumping seawater? Car parking in summer
Larger pool = more people and not enough parking
No concerns
Nil
Parking and congestion
Parking
Looks ugly and will ruin natural view
Parking
That the council won't build it

The size of the pool VS parking in the area. There isn't much else
Parking.
Just parking and how is to kept clean?
Nothing can't see any issues
Absolute overcrowding in the area, Hallett Cove beach attracts people for the type of beach it is, a pool is so unnecessary when we have gorgeous beaches nearby.
I like the ocean side the way it is
Pool isn't necessary. I like to keep hallett cove rocky beach as it is . Keep it wild and natural . There are other closely beaches to swim
Car parking Disability access Winter use and maintenance
Impact on environment.
Car park is too small
None
Your tapping into nature land! The cost for rate payers, lack of parking.
None
Lack of parking, need for more toilets and other facilities need to be adequate, I believe this will be very popular so more than just the pool needs to be added (food trucks? Cafes? Additional playground equipment, bbq facilities, shelters and seating)
Car parking in front of our house already we have a major problem with just the bbq area I did not purchase this house to be looking at cars in front of our house . Leave nature alone enough problems have happened thru human intervention . Costs of maintenance holdfast council have huge costs with pumps due corrosion we will have the same with pool pumps . Late night parties drinking at the moment is also a problem with a pool it's going to get worse
Parking with popularity
Nothing
Maintenance Parking Facilities
N/A
Car parking for all the visitors.
Parking, we may need more options for visitors
Nil
Environmental , destruction of a very unique beach , car parking
Will it be free like tusmore
Lack of parking, cost, spoiling a beautiful beach
Parking,
To small Will get very busy in and around the pool Not enough of a cost difference to justify the small V big pool
Access- wheelchair/ parking
Nothing
Parking, inappropriate use of this particular beach, environment issues
Pool supervision and graffiti. The decline of surrounding nature due to increased traffic. Lack of parking.

none
Need to be accessible to all have a shallow end with ramp and blocks for diving. Merewether Baths in Newcastle where I grew up would be good for you guys to look at. Maintenance is key
No concerns
NIL
Access, would be nice if more businesses/vendors close by
Increased foot traffic, human imprint
If not popular would like option 2
Na
Nothing, it's a wonderful idea
It getting really rocky
only concern is the parking and the impact for the residents nearby. A parking area nearby with in walking distance would be an idea to consider
Nil
Nothing
Nil
Lack of parking and disturbances from public
Expensive
1. Fencing to protect against unaccompanied children from entering 2. Sufficient water turnover to keep the water healthy 3. Concrete forming less appealing than a natural rock formation.
None as long as appropriate scientists are consulted
I actually have no concerns.
Parking
Car parking, noise, anti social behaviour after hours, lack of other amenities
Lack of parking for more people coming to the area Environmental damage during construction Bringing more people may cause property destruction caused from vandals
none
parking
None
Structures should never be built on the beach. They always cause erosion.
Not deep enough at deep end for water entry. Ie. diving, kids bombing etc. Presents a a safety risk and should be reassessed.
Nothing it is what I would like to see
Nothing.
Size of pool, Cost of pool, parking & disruption to native wildlife.
My only concern is that it won't be built due to NIMBYism
Large amount of concrete
Nothing
Size of the 50m pool - possibly too big.
Nil concerns, I just hope it would operate on a tidal flush mechanism.
Parking is a concern, it is very hard to get a park at the moment with only the playground there. It is frustrating as a visitor but also for the local residents (although this is to be an expected drawback of a beachfront property in any suburb).

I have no other concerns. We only recently moved to Hallett Cove and were absolutely thrilled when we first heard about plans for the pool (as are all the other young families I have spoken to about it).
Don't have any concerns
Nothing
Nothing
'-access to amenities such as toilets
I do not support
Lack of parking which does not impact on residents living in narrow streets between rail line and beach
From the FAQ it appears as though a thorough investigation of the impacts this project may have on the environment has been carried out.
The 50m pool seems just too big in the design illustration. Of course in reality it may not look like a runway
Risk of further damage to sand drift onto Hallett Cove Beach
Having enough car parking and enough public toilets available.
Car parking, litter, idiots
Too big, ruining the natural environment yet again, safety of users due to blue ring octopus
Cost, footprint, environmental impact
Graffiti on the structure, applies to all options Are there legal requirements for life guards, or will it be the same as if someone choses to swim in the sea, where users are responsible for themselves. For me it's only an issue if there are legal requirements to have a life guard.
One only and is the parking and is already a problem especially in warmer weather
I worry about the water getting stagnant if there's not enough water movement
Large, non-natural and imposing structure on our beautiful coastline Parking is already often difficult nearby in summer
Parking arrangements
Damage to the conservation park, lack of parking, long distance from public transport
Na
It completely wrecks the appearance of the beach. No additional parking is provided and will increase congestion.
I have no concerns
Nil
Parking spots
No concerns at all
Nil
Nil
Not enough to protect coastal erosion. How will the pools be maintained?
Poor design. Parking. Additional sand blocking
Nil.
Thinking of cost and usage I believe this is too big
Up keep of a larger pool

Cleanliness
Nil regarding the pool, however parking may be an issue due to how popular the pool will undoubtedly be
Car parking for visitors May need extra facilities for changing, toilets etc It may lead to a swimming club developing which will need facilities (not necessarily bad)
Ongoing costs and maintenance
The discrimination faced to vision impaired users.
Completely unnecessary
Parking Miss use of the area (more users) Safety, will life guards etc be available
None, Nada, Zilch
2 pools might be better during peak times.
I have no concerns
Parking is the main issue
Parking, parking, parking
Parking on the streets Lack of shade Nothing else is concerning
Parking
Parking
Initial cost only
Protection from elements. Not being big enough to host events appropriately. Not enough pool side space for birthday parties, event shades, general playing, tables and chairs
Larger footprint Cost Over expenditure
Additional car parking issues.
Not concerned
No concerns
Parking options, opening times, lack of bus services.
Only 1 concern...parking availability for others who aren't within walking distance. How it will impact the local residents if we have hoards of people parking in nearby streets.
1. I am unsure where the additional parking will come from 2. Acknowledged that the environmental impact might be bigger but it seems the design has been well integrated into the natural landscape. I think it is well done concept design!
Parking
Not enough car parks, no shade
Parking, toilets etc
None
Possible congestion there, parking issues, damage to the current setting
N/A
None
None

Parking
Parking only however people will have to park further away and walk or use public transport, beaches traditionally don't have loads are parking and people still flock there.
Nothing
None
Parking
Parking Embankment is reinforced in keeping with the natural environment
Everything. Hallet Cove is losing its natural environment.
May be crowded, narrow, taken over by swimmers
None really.
None
suspect there will be parking problems on hot days
graffiti of young teenager
None
Nothing
Vandalism, lack of council ongoing support/ up keep, changing facilities (showers, lockers etc)
Will there be a kiosk and/or on duty lifesavers during peak times.
None
Nothing be great
Nothing
1. Cost to build plus ongoing annual maintenance expenses, which will be passed on to me via my council rates bill. 2. Negative environmental impact on the natural costal tidal environment. 3. Increased traffic, parking and noise in the residential streets surrounding the proposed pool.
Too many silly people which will not make it child friendly, will there be lifeguards (lots of tourists who can't swim, too popular/crowded
I think parking will be an issue, probably.
'- environmental impact - maintenance cost - attracting too many tourists (parking spots?)
None
THe last thing needed is a pool, the beach is fine as it is, before holdfast bay dregded it years ago. just put back what they took.
Not enough parking
None
Nothing.
Sand distribution. Ecological or geological disruption. It needs to be carefully researched.
As above
Nil
None
1. Will there be shower/ changeroom area incorporated into the design? 2. How will the pool be cleaned/ how often? 3. How far away is the pool design from the stormwater outlet pipe in the area? Will this discharge away from the pool area?
Not applicable.

none
Hallett Cove is an important Geological Heritage site and the development of a seaside pool and embankment protection would have significant impact on the Geological site and the environment. The seapool will increase erosion to the embankment to the north similar to the West Beach Marina. It will impact on glacial erratics and the the rocks of the intertidal zone and have potential impacts on Kaurna dreaming story lines.
Parking might be a bit of concern. Might need another toilet .
1) Rate payers money being spent on something that will be used by people who have contributed only via state government taxes 2) Ongoing upkeep expenses at a time when most rate payers are struggling 3) Almost 8 months ago I requested a yellow line be painted opposite my driveway for safety purposes. Despite 3 phone calls to the council in that time, no feedback or action from the council. Why should we spend all this money when council cannot manage the day to day simple issues
lack of changing/toilet facilities potential lack of lounging/on lookers space as not an option to sit on pebble beach public transport should be encouraged and bus shuttle from station would be good
no concerns
no allocation for extra parking in area, nowhere near enough parking for upgraded facilities that are already in place
Parking is a little concerning, hard to see alot of parking being made available without costing the view of current homes
Maintenance
Nothing apart from scale, visual impact and parking …… this aspect is vital, as the cafe already takes up bays as does coastal walkers
I have no concerns
Nil
Non, lots of space to use
Size Parking and extra traffic Night time problems that have been associated with other beach areas.
Safety Barriers
None
None
None
None
Walking in the pool with people with disabilities will there be access with drive and unload , then parking of vehicles. Will there be parking for local people to area?
None, I was a regular user of the Henley Pool back in the day, and loved it
Increase of cars parking, lots more users in the area, increase of poor behavior around the facility.
None
Ongoing cost over time, accomodating influx of people with little parking we need to encourage the use of public transport, pool attendance ie Life Saving
1) Myopic people that oppose it 2) Traffic management 3) Up keep of public amenities in the area
None

Ruining what was once a quiet place with too many people too much traffic and more polution there are plenty of nearby beaches if you want to swim
Parking is my only concern.
nothing concerns me about it.
It's ugly and ruins the area it will cause more polution, traffic problems and too many people where it was once a quiet place to relax
Not enough parking to support additional users and visitors to Heron Way and surrounding streets
Ongoing Cost ,Traffic control Not needed
I don't really have any concerns that I can think of presently
Parking
Just parking
Nil
Not really anything concerns me
Car parking Facilities
'- Potential higher operating budget - Depth of 50m pool for community safety - N/A
Parking is already an issue in this area. What possible area could be utilised to provide more parking?
Concerned about the potential for storm damage particularly to the most exposed corner. Cost to create large hard scape surrounding area given the terrain.
Erosion control and impacts on the surf in winter
Cost
None
Stopping the small surf break that comes into that area. Parking!! There doesn't seem to be enough.
No changing rooms Parking
Will there be enough of a tide all of the time to fill the pool?
I think the parking and litters alcohol user.
Parking Pool Safety Late night youth pool parties.
Parking
How will car parking be affected Big crowds Will it be built properly, is it sustainable
people (kids) throwing surrounding rocks/boulders into the pool, vandalism at night, rubbish
On the drawing plans it doesn't show: shading, shower facilities, and maybe not enough car parks
I have no concerns
Na
Parking. Lack of businesses in immediate area
Carpark, maintenance and traffic
1. Lack of parking and other facilities. 2. Noise, pollution and environmental impacts. 3. Lack of funding and upkeep.

None
Car park is a concern with bigger pool.
Maybe the pool path on the western side (seaside) is a bit narrow, not sure if there is a fence running along the length but that would be a safety issue. Shade is always a issue as well.
50m pool appears too large for the area
When it's going to be actually built and opened.
Higher cost to build; Higher cost to maintain; Potential to attract criminal activity to the area.
Need to add a few 25m lanes
Better looking, more room, smaller footprint
Only one concern is parking. I don't think there will be enough for everyone.
to large unnecessary cost
Parking
It will attract too many people It can cause parking problems in the neighbourhood. It won't be warm enough for swimming except during a couple of really hot days.
Cost
Parking,
I feel that the pool "footprint" is to big.
Lack of Parking. Supervision for safety.
Environmental impact. Increased cost. Parking and crowding of beach area
Effect on environment Possible damage in storm Cleanliness of water and safety
The embankment needs to be higher to prevent the sea water coming in.
Car Parking Lack of Shade
Nil
Cost of project and the contract conditions for work done by contractors to avoid poor construction rework and additional costs!
Environmental impact
N/a
Nil concerns
Initial cost for build and ongoing maintainence. Possible vandalism or damage to the pool .
I'm happy with project 1 - 50m
Parking Shade Cost
Footprint too large
I have no concerns
None
Nothing. I think it will be amazing for the community
no concerns
1. Being able to walk unobstructed along the beach.2. Car-parks. 3. people urinating in it.
No concerns

Parking,noise, antisocial behaviour
Parking, noise, congestion of streets, alchol.
None
environmental impact needs to be carefully planned
How it will be maintained How it will be made safe for kids How this will impact on the environment and carparking access
That the embankment might not be strong enough
Too long for me personally to swim. What depths is more the issue and is there disability access?
Car parking only concern
Ongoing costs affecting council rates
that it be properly maintained in the future
Nothing.
Car parking Pool safety Attracting degenerates
Nil
1.Parking at very busy episodes in summer, but the majority of time will not be a problem 2. Ongoing maintenance 3. NIMBY locals
More value to the area
Lack of Parking Cleanliness of public facilities (those by the boatshed Cafe) are not as well maintained as they should be now. That will become even worse if a pool is installed. There can be health issues with the pool water its self if there is not a total flush with every tide. Has there been any consultation with the councils that maintain the tidal pools in NSW? I know that they have suffered numerous problems.
The extra traffic in the area. Where will people park. How the pool will be kept clean and will it be heated
Nothing I love it
Parking
The high cost for all the ratepayers Inc ongoing maintenance costs just for the few that may use the pool. It will destroy the natural look of the area, it will take away from the Anzac memorial area.
Nil
n/a
No concerns
Think the parking study is way offline. I was down there sun 15th July at 11am, middle of winter, there were 3 spaces in heron way , my other issue is, make the kids wading pool concrete floor. If you want natural and walk on stones you go to the beach. Make it comfortable to use
Easy access
Not sure if the cost of a 50m pool justifies the use
Nil
None
Nothing

Parking Safety
The pool will only be usable for approx 6 mths of the year due to Adelaide climate. Lot of money fo a small return. The location is subject to extreme weather conditions
Nil
Too big a pool
Traffic parking Rubbish
1. Expensive to maintain 2. The extra number of people that will come to the area might be a problem for local residents
None
Cars
Nothing
1. Sand drift north of the site. 2. SLSC coverage. 3. Ability to keep sand and debris out.
Adequate car parking
The main concern is the size and over-crowding
None
Nil
None.
The pool options should follow safety standards and have a fence surrounding both the wade pool and the 50m pool. There is a playground for young ones in the vicinity so even more reason to have the fences. Due to extra activity in that area diagonal parking along that stretch would be useful for parking as it is often very full during weekends as it is.
1/ Parking. If you are older or have a disability walking 450 metres to get a car park is impossible. The option 2 parking adding 7 additional carparking spaces is not anywhere enough on busy days. 2/ If the pool concept is successful, then the poor car parking situation is made worse. 3/ Not only will street parking will be an issue for nearby residents, but the increased traffic will lead to safety - kids running across roads increased cars etc but also reduced amenity of these residents. 4/ Increased rates to pay for the ongoing costs and the pool will near major works every 10 years or so due to the seaside location and impact of water salt etc. I would think a lot of pool users would be from outside the council area and we will be paying for them.
N/A
width of the 50m pool. Otherwise not concerned
Car parking facilities
Don't like it not conforming with the environment. It looks too commercial. Would like it to have a rock edge so it conforms with the environment more.
Must be set up for lane swimming and recreational swimming . It shoufd encourage both
Size of protection area
No real concerns. It does take up more space, but it is being utilised well.
Everything. The preservation of the park and its history. The mess the beach goers will leave, and no capacity to hold the visitors (parking etc)
Nothing

Not enough use Too big Too expensive not enough use
Need another coffee shop as boat shed would become too busy
I hope the natural rock surface for the child section is not too rocky/bumpy - as this will risk falls or liable to get slimy - as this will risk slips. Also not concerned but confused by the statement on the site This note: 'Vision impaired users limited to using eastern most lap lane of pool as it is has a continuous edge.' It seems odd because the east side doesn't have a continuous edge. It has a side pool of sorts.
Parking options
Cost and upkeep
Nothing, looks great.
Destroying the natural beach
Affecting nature/creatures Parking
Hallett Cove beachfront is currently a quiet, family area. Popular for walkers and family gatherings. The pool would add another dimension to an already great facility. The need for increased car parking and infrastructure such as toilets and change rooms could impede on the current park like area. Pool safety may cause a problem if security, life savers and rules are not in place and enforced.
No concerns
Parking
Potential lack of legal support
N/A
Parking, amenities (food etc on a busy day) & that it won't go ahead!
None
Parking spots
Beauty of Hallett cove beach after construction Design Concept of protection
Lack of car parking and services for an increase in visitors. Affecting the natural landscape of the area.
People not using it
Parking Toilet Facilities
That it won"t go ahead!!
'- is there enough car parks for such a large pool - the outlay costs to build and ongoing costs to run it - lifesaving availability
Cost. Parking.
Public transport options are far and few in between especially on weekends I am concerned that the amount of added car parks might not be sufficient despite the parking impact study, which feels limited in scope I would appreciate locker facilities to store valuables (like my glasses) as my vision is fairly limited without glasses
No concerns as long as proper environmental considerations occur
Taking up too much of the beach space. Negatively impacting the natural beauty of the area.

Expense
Maintenance, cleanliness, water safety of large number of people (will a life guard be needed)?
Ensuring appropriate water quality in the oool if it is not regulalry flushed by the tide Cost may be prohibitive compared with other options Traffic managemeng including parking during peak use times
Seaside pool cost, increase of visitors.
none
Size will potentially impact the beach ecosystem. Less area to walk on by the water. Overall cost.
Damage to the coastline environment
Na
Parking and easy access
Parking in area for a project this size. Impact to the sea/ area when constructing.
Cost.
Parking
Parking access
None - it's perfect
Nothing concerns me.
Impact upon the environment and natural habitat in the area
no concerns
rubbish, sea damage
Car parking cause there's not much already around there It being to busy to swim and do laps People behaving badly
Cost Traffic and social impact Environmental change not in keeping with coastline
High impact on existing area with man made structures; Parking issues with more people using the beach area as a result of the pool; Costs - Initial and ongoing
None.
Suitable parking
None
On going maintenance
Nil
Nothing
Its too good to be true
May lead to increased beach erosion like West beach sailing club. But hopefully option 1 may help avoid those problems
I don't know who this "local resident" who came up with this idea is, but clearly it's someone who loves sitting on their ass all day and has literally nothing better to do than figure out how to make their life marginally better. The most psychotic idea, how did this even make it past the referral phase? This person's suggestion should've been laughed out of the building. The absolute minimum comfortable temperature for a pool is 21C, but Hallett Cove's average temperature is below 21C for NINE MONTHS of the year, which means the pool will be used for 3 months every year at most. You really are gonna spend all this money for something that'll be used for one quarter of the year? I

guess it gets you political points. You guys and this resident need to pull their head out of their ass and realise we're not living in lala land where money grows on trees and exists to suit every selfish desire that might make it's way through the gaps of your thick skull.
Only problem could result in overcrowding,
Parking. Hard enough to get a park in summer already
Parking
Nothing
Looks to fit all concerns people may have.
Parking and traffic
None
None
No concerns whatsoever.
nothing
Maintenance long term-fear it will be let go in ten years when too hard to maintain and become an awful 'used' eye-saw on the coast line. Why not just do up the beach that is there-clear rocks, restore sand and have life saving. There is also no provision for changing and no extra parking. It's already terrible in summer.
None
None
My understanding is that this is a protected area
Enough car parking for visitors
Parking is probably the biggest issue. Me and my family don't mind walking but I would suggest extra parking somewhere may be necessary.
No concerns! Such a great plan!
Size of pool, available parking and need for more parking.
Nothing
That the environment and natural beauty is protected as much as possible; The water cleanliness
nil
parking
No concerns
man made structure changes the nature of the beach area
I have no concerns
Parking
asthetics
COST CARPARKING LOCATION
i wish it could have been bigger because it is going to be extremely popular.
Parking Disability access Seating for lower mobility users
The very slow progress being made.
A 50mtr pool could be taken over by swimming groups for competition and other reasons.

1. It's ugly. 2. It's a waste of money. 3. It benefits a small minority of the residents who might use it. It looks ugly. It looks like a airport runway that has been built right in the middle of the beach. It's a horrible design. It should be more integrated into the surroundings and look more natural.
The design of it and the embankment protection
It will cause damage to the natural landscape and is not environmentally friendly.
Impacts of parking due to events. Council potential to enforce paid parking. Management of access vs events.
None, the pool and environment need protection
Nothing
Room for kids Bath area to get rinse after swimming
None, other than maintenance.
Parking issues Lack of other amenities (toilets, lockers etc)
The pool is unnecessary. We don't have the population or user base to justify the expense.
Nothing
No concerns
Nil, it will add character amongst walkers, beach goers and tourism. Since Pt Stanvac Groyne was built we have not been able to swim at our local beach,
too busy for residents to use, cars parked in nearby streets
Nothing about the design as I trust any environmental concerns will be addressed and the best possible design will be used
Traffic on Cove Road
Cost
Nil
Car parking, environmental impact, ongoing maintenance
i don't have any concerns
None
Impact on Hooded Plovers
None
Impacts on the beach Impacts on sea life Parking
none
cost of upkeep
Conservation erosion and cost to build and maintain
Possible no lifeguards, anti social behaviour possibilities, not fitting in with local flower and fauna
Parking
Nothing
1. Waiting for it to be ready
that some one will decide its not a good idea it will probably not be finished by this summer as i am a frail79 yo i i could be too old to use it
No concerns

Hallett Cove is an incredible geographical landscape I can't believe it would be considered for destruction
Nothing.. It will add improvement to the area and society.
I'm worried that it will not happen
None
Accessibility/safety Parking
Is there sufficient parking Water safety
I have no concerns about the 50m seaside pool.
Nil
Nil
non concerns
money could be spent better. pool will be washed away
None.
The bigger the pool, the larger the number of people that will use it, putting more pressure on parking.
Parking
Nothing really apart from enough parking in a very popular area but we can live with that. I am keen on looking after the environment. The proposed pool should help protect the cliff foreshore from heavy westerly storms often witnessed there. There is a possibility that more parking may be able to be developed, close next-door North of the coffee shop near the entrance to the park walking trail. With some good local native plant landscaping it could fit in well with the whole plan & be positive for the whole development ..
None
None
That this may not get built as it is a great community initiative.
NONE.
Maybe make a the beach area (with sand) to the south of the wading pool Add steps on the sides going down to the seaside so there are no high drops with the tide out Section 4 - the crushed granite might be hard to walk on, cover with beach sand?
It could be bigger.
No concerns
Nil
Environmental??? I guess I have to leave this to the 'experts'
Parking
Parking
Too large
Project costs Maintainence Costs Larger footprint
The lack of parking for the area
the cost of construction, the cost of upkeep, the lack of parking
I do not believe the pool will have an ROI impact on environment

Current design will be below high tide line and unusable for majority of the day depending on tide cycle.
It's important to keep the pool clean. Make it as natural looking as possible to blend into the beach environment. That it's free, open all the time and is clean
That it will cost too much money. I doubt many people will use it year round. It is not worth the huge cost.
Maybe parking, there aren't enough parks around that area as it is.
I do not have any concerns as I am sure most of any problems have solved
no commercial facility, like restaurant, cafe etc. toilet with changing and shower
parking of vehicles, water safety, access for emergency personnel.
No concerns
benefits far outweigh the cons.
Water temperature!
Erosion to the beach during building. Finite life of pool, damage to environment when dismantling Cost of pool for 2 months of usage per year.
The embankment needs to be strong enough to withstand the weather & force of the sea. Henley Pool back in the '60's is an example of this!
N/A
nil.
The parking could be a problem, but I see you have addressed that.
Nil
Litter left around, dysfunctional behaviour after hours, alcohol consumption, smashed bottles. Noise and disturbance.
increased volume of traffic accessing facility. Cost impacting rates. environmental damage to the coastline.
Parking and Infrastructure. Safety. Antisocial behaviour of users.
1. Cost 2. Disturbance to natural environment 3. Traffic
Maintenance.. Upkerp and cleanliness..that goes with any concept
It's a blight on an already compromised beach, it doesn't have enough parking and it will be expensive for council area and it's ratepayers already maintaining two pools
Lack of parking available, no other concerns
Sea level rise will make this pool obsolete in the near future, waste of money that could be spent elsewhere.. Damage to surrounding natural reef and coastal environment during the build and beyond. Increase in traffic so future need to increase parking footprint.
Nil
I'm wondering if the length of the pool will bring about issues over time. Also the expense is of concern.
I feel it is not environmental It will spoil the beauty of the beach Council and government money could be better spent on maintaining other venues and facilities in the Marion council area
Too small and will be an embarrassment...and car parks ...not enough now !

Just hope everyone are using it sensibly & not being silly running around & jumping in without looking at people especially young children. We just want an enjoyable & safe/fun environment for everyone.
None
For us the only downside is the potential increase in traffic and subsequent parking.
No concerns, just get started the sooner the better
No concerns
Parking (same for Option 2). Limited parking already exists at Hallett Cove - particularly at the southern end Unclear about the impact of the larger footprint - what are the potential risks? What would be the maintenance schedule - how regular, what is done, how specific storm incidents are handled etc?
Nothing
I have no concerns....providing a seaside pool adds only positives for the community , not concerns
It would ruin the ambience of what is currently a natural environment unsoiled by man-made structures. It would remove the intertidal marine creatures and shorebirds that currently live there and the extra activity would stop the endangered hooded plover from continuing to nest in the area (last season they were nesting there). It would look ugly from the world famous Hallett Cove Conservation Park.
Cost to Marion Council . This is a state Liberal Seat and Government is Labor. Funding would be minimal from the government
Nothing, I think it is a wonderful idea
Nothing
The only concern I have is the overall cost of the project.
No concerns
Nil
no real concerns
1. Car park - the project provides additional 30-40 parking bays. Currently, it is insufficient esp during summer. 2. Road to Heron Way - access road is small and not designed for high volume traffic, thus causing congestion and inconvenience to residents. 3. On going cost - maintenance of water pump, life guard on duty etc.
I think Hallett Cove beach is unique and any option to build a pool will take that away from the area
Down drift impact. Environmental feigned concerns, more so by those who can't swim or dog paddle. Never get wet. Delays to deliver.
Nothing
Nil
Nothing about this option concerns me - it is the most logical.
N/a
maybe the ocean water could over take the pools or the rocks may become and issue
No concerns
the car parking is something that has to be looked at first as it's already horrible finding a park down there without it, will become very hard for familys that take small children to the park regularly. Parking on grand central is not realistic it's a steep hill that a lot of cars struggle with and banking cars up by parking on the street will cause so many issues for residents
Parking availability.

1. The lack of adequate parking. 2. The lack of adequate parking. 3. The lack of adequate parking.
1. Project cost
The water not being clean, people drowning, it being vandalised
None
Loosing the natural look of the environment
I don't have any concerns. This pool has been discussed for over 20 years It is about time it was completed.
Is the pool close enough to water so the water is refreshed regularly
Nothing concerns me
Parking
Any construction should be undertaken to minimise wider impact on the coast and support protection of the embankment. If the water used to fill the pool will be clean and or need to be filtered. Perhaps some way to monitor usage in hot weather, in case it gets too busy
The limit for vision impaired users. I have no other concerns.
Increased traffic, environmental impact of using sea water to fill the pool, vandalism possible
Carparking3
Not sure about environmental impact The large pool is optically quite disruptive of the natural beauty if this coastline
Nothing concerns me.
No concerns.
No concerns
Environment, parking, cost.
As long as it is environmentally friendly
Not enough seating. I imagine parking will be an issue.
i don't have any real concerns
Nothing....it's perfect.
all good
I don't have concerns about this option. I think it is great idea and I am looking forward to have it.
Not enough car parking
Size
It would be nice if it could be filled by ocean water/tides
The environmental and ecological impact, the usefulness of such a proposal and the financial cost.
Nothing
I think smaller pool is more cosey
N/a
Parking issues.
No concerns.
Nothing.
none

1. I think it is too large, I think the 25metre pool and children's pool is adequate. 2. It will attract too many people into quiet Hallett Cove, not enough parking space. 3. Higher cost including higher maiten
No real concerns here
Car parking, are lanes included in the pool.
Parking
parking. parking. parking.
I don't support a seaside pool
Parking increase Public change and toilet facilities appropriate for families that can be maintained
How often does the tide come that high in summer to keep it clean
Lack of car parking to cater for increased tourists in the area once complete
The Hallett Cove pool would need to be serviced by a pump to provide fresh sea water. And when the outflowing water from the Field River is laden with mud and pollutants a water purification plant would be required.
Environmental impact
Nil
No concerns
Nothing concerns me about the build or the design its the maintenance and keeping it clean and presentable that i worry about. Don't want an eyesore, after a few years.
Cost
It's a good size, it appears well place to take in the water at high tide and it makes good use of the beach.
Parking
Improving the public toilet facilities in the area
will the cafe improve its hours and toilet facilities?
None
maintenance agreement to proceed
Needs to look nice, natural.
None
The options summary suggests the pool will have a pumped inflow of sea water. Were options considered to have a tidal inflow of water. To minimise capital and operational costs? Are shade structures being considered as part of the design?
1. That it will attract many people from outside Hallett Cove and the foreshore will become inaccessible to locals during summer. 2. Antisocial behaviour by ethnic groups that do not share the values of a western liberal democracy. (Heckling of women, loud music, antisocial behaviour of various forms, insufficient facilities to support the people.)
Environment issues Ecological issues It will also cause major issues to parking Pump issues and cost
Parking
Blowing the budget
Zero concerns.

My biggest concern is the parking. Its busy enough having the board walk, beach, play ground and cafe. Sometimes already its hard to get a park. And i feel sorry for the people who are living inbthe houses along where the parking is.
NAn
No concerns
Parking, shade for children, ample toilet/change room space
Damage to beach area Cost - will this affect council rates? Unsightly appearance
Will need more toilets closer to that area. Change rooms would be a nice addition. And consideration will need to be given to emergency services access
will lifesavers be on duty during peak periods?
1 removal of rock area that people use to crab 2 parking limited where will new and extra users of beach park 3 pollution and toilets not capacity for this many people
1. Being too deep or too shallow 2. Not enough space around the pool to everyone personals stuff
Time line as would be great to have it asap. Some disruption to local people (short term)
Cost Maintenance costs Traffic congestion
It doesn't get up as preferred
see above
Nil concerns
None
Location on coast, safety at night, ongoing cost council rates
Don’t humans ever learn? What a joke to put this monstrosity in this most unique location. A geologically significant location and along come a few irresponsible politicians and uneducated humans to ruin this area with a “pool”. A pool can go elsewhere thanks.
Sanr
Costs, parking, disruption while building
No concerns- all good things can only come from the plan not just for hallett cove but for tourism and SA
Car park
Cost to maintain, possible cost to residents through rates at a time where cost of living is hurting many
Cost Cost Cost
Not much
1 The pools are too far out and should be tucked into the bank/embankment more so people can walk on the northern side in rough weather. 2 The pools need pumping anyway, so tucked in it won’t look just it's just dumped on the beach as they do now. 3 Land in front of the playground should be incorporated into the design for public viewing, access and made useful for parking event vans. 4 Further out the pool will fill with seaweed every June-August (I live here and have photos showing that every year).

5 Do not under any circumstances add quarry rocks to the beach or it will look completely stuffed up like Brighton.
1. access to the pool for people with disabilities 2. appropriate depth of pool for learn to swim 3. availability of life saving equipment
will cause further damage to the coast, Parking will be an issue, rubbish will be an issue, will there be lifeguards, where will the pumps go?
Takes more of shoreline than Option 2 - though I think this has been minimized by orientation of pool.
Nothing really
The Wowsers and negative comments ,Possibly parking
Increase erosion, destroy beach and impact glacial drop stones.
Having swam coast daily from 1989 to late 1996 in all sections of Marion coast year around seen the visual surface pollution and results around Field River out flow. Built Port Hughs boat ramp and with 5 others built Moonta Bay Boat ramp, both with erosion damage to that coast. Seen damage by Oil Spill dispersent truck {est 1960] that pressed drop stones into the soft permian clays along that area.Result in shore lowered with Ocean swell(Refer Pak Poy survey}.Neither knowledge or respect shown to permian geology of this coast,Reflects bad on all involved.
Cost of upkeep Unforeseen issues re erosion of foreshore Strain on parking spaces
More facilities- toilets, cafe etc
I have no concerns, its a great addition to the beach and will definitely be awesome for both locals and non locals.
The layout visually The 50m pool looks a bit big but can understand why it's useful for someone wanting to use it for fitness
The amount of car parking required - I know how much demand there is for existing parking space. How well it will be maintained, particularly after storm events. Sea water intake seems too close to shore.
No shaded areas for people to sit. I've lived in Sydney, and having a lawn area and trees is wonderful. What about toilets, kiosk, and the like?
Visually unappealing Concerned about environmental impact Concerned about maintenance and upkeep as the pool
I request more depth at the shallow end of the 50m so people can tumble turn when the tide is low. I think it says 1.3 but you need more to do a turn And long course over summer just makes more sense
Parking is the only thing I would be concerned about but are lucky to have good public transport available too and environmental protection
Parking, erosion and needs to be done properly.
Impact on fragile environment
None
The parking area poses a concern The mechanisation of getting the water into the pool Good professional thought and expertise should be given to the embankment.
Nothing

I'm not clear if a design that had a greater focus on a nature-based solution to coastal erosion has been considered.
No concerns
Maintenance
Car park spaces, only one coffee shop, hopefully beach can be kept clean
Its size. Increased need for shade, parking, amenities
Nothing
Parking
It might be really popular Might look a bit out of place to the natural hallett cove feel
None
Lack of car parking Would like to see room for cafes/food trucks
crowded beach Noise parking
Nothing
Too busy
Nil
Cost, maintenance, increased traffic
Lack of parking for visits, that is it!
1. Pool becoming overcrowded. 2. Lack of facilities for large events. 3. Will the pool be heated for winter use?
Cost, impact of construction, wave action especially in winter
This has just been a concept by the influx of English people to the area. If you want to swim in the ocean swim in the ocean. Don't destroy a conservation area high in biodiversity and marine values not to mention the history of the site. Let the English learn to swim in the ocean not bring the ocean to them.
Nothing
50 m pool both ends needs to be over 1.35 for racing diving otherwise unable to hold events like masters or open ocean racing relays. build pool to encompass all events not just recreational. 25 m wide 50 m long.
n/a
Worried that the design will be done cheaply and quickly leaving poor quality and pool falling into the water
Parking Access
IT IS A COMPLETE AND UTTER WASTE OF RATEPAYER'S MONEY, PLUS THE ONGOING COST EVERY YEAR FOR MAINTENACE AND CLEANING IS FAR TOO MUCH. THERE ARE BETTER BEACHES CLOSE BY THAT PEOPLE CAN USE, LEAVE HALLETT COVE FORESHORE AS IT IS.
No concerns
Really, just simply car parking - the area is currently full and busy on most sunny days throughout the year, so an additional attraction will inevitably increase surrounding vehicle traffic. Other than that, I have no remaining concerns. The beach is already devoid of sand so the proposed structure will not impact any long shore drift refilling of beach sand issues as it this doesn't currently occur.
Nothing

Parking
Ensure change rooms, adequate parking and toilets are also part of the plan. No concerns - brilliant idea!
Size of pools, addition of proposed amenities, safety for children on walls
No concerns
It not going ahead.
Option 1 and 2 would have the same concerns. I don't have any concerns.
Environmental Impact: The construction of a 50m seaside pool and embankment protection may have potential environmental impacts on the coastal ecosystem, including disruption to marine life, alteration of coastal sediment dynamics, and changes to natural beach processes. Cost and Maintenance: Building and maintaining a seaside pool and embankment protection can be costly, with ongoing expenses for cleaning, maintenance, and repairs. Ensuring sufficient funding and resources for long-term management could be a concern. Public amenities and safety: The seaside pool and embankment protection may attract a large number of visitors, raising concerns about potential safety risks, such as water-related accidents or overcrowding. Adequate safety measures and supervision may be necessary to address these concerns and ensure public well-being. Furthermore, there are current inadequate amenities such as parking, public toilets and and lifeguard service at that location.
Control bad behaviour
Impact of construction works to the surrounding space.
Nil
Nil
Nil
Parking, parking and parking!!
People won't support the outdoor exercise option due to cold in winter, noise and additional refuse affecting our fauna for nature conservation, or fear parking will be an issue due to low bus services on thia route
Increases traffic and no increase in parking
Insufficient parking, the impact on the coast line, the impact on the native birds and marine life
The physical and visual impact on the proposed site. The ongoing costs of maintaining the pool. The prospect of the pool becoming unpopular with users.
Increase in parking resulting in cars parked in side streets causing congestion Increase in local traffic Environmental impact
Need to make it look as natural as possible Need to plan for parking- public transport
Making sure it isn't an eyesore and blends into the natural environment as much as possible
Environmental impact on a natural landscape Increase in local traffic Lack of parking resulting in side streets being utilised
Carparking, congestion in surrounding streets, displacement of native birds and animals
It not being maintained, pool condition deteriorating over time and becoming ugly, pool not being cleaned
May attract more parking issues. Could have adverse visual impact. Could be damaged by storms.
Nil

Long shore drift of sand and wrecking the beautiful coastline, the cost and the running cost, the parking, the extra people
Over crowding, car parking and maintenance required to op keep.
Nil
Nil
Lack of confidence of long-term costs and maintenance associated with the project. Destruction of the natural small rock formations that house the cute crabs to make room for the pool. Our houshold believes the project would be a waste of government/funding partner(s)' money and would be an eyesore to the natural view that currently exists.
Nothing
'- Initial Cost - Annual upkeep at $1M per 5 years - High Cost provision per persons making use of facility
The environmental in pact
Nothing.
The whole shoreline of the Hallett Cove bay is a product of glaciation, and any structure built on it will contaminate this site, which is of world-wide geological significance. Any structure built on this shoreline will cause a change in wave dynamics, which will undermine the structure where it can, or undermine another area nearby where it can't. What little sand there is on the beach will build-up on one side and scour out on the other.
Increased number of people to the area Parking Pollution
My concerns are many and varied, including: 1. Construction and ongoing maintenance costs - already extremely high and likely to blow out considerably in the current economic context. I do not support my rates being spent on construction or ongoing maintenance of a seaside pool at Hallett Cove Beach. I am also concerned that this structure would attract vandals. As a regular user of Capella Reserve, I have been disgusted by the vandalism of the toilets installed there (necessitating their indefinite closure) and the astronomical repair costs this would have resulted in. I fear that a seaside pool would attract the same kind of antisocial behaviour and damage to Hallett Cove Beach that we have seen at the Capella Reserve toilets. 2. Lack of supporting infrastructure for the additional people this would attract to the area, noting the beach is already overcrowded with visitors at peak times. Inadequate supporting infrastructure includes failure to provide additional car parking and lack of additional toilets to cater for pool users (meaning people are more likely to urinate in the pool and around the beach, creating hygiene issues). 3. Proximity to the War Memorial, which I consider to be disrespectful. Hallett Cove Beach is renowned for its geographical similarity to Gallipoli (which I can attest to, having visited Gallipoli). Construction of a pool in front of this place of remembrance is crude and disrespectful, in my opinion. 4. Proximity to the Tjilbruke Dreaming Track and marker - as above. I view the construction of a pool at this location as disrespectful to the local Kaurna people and their cultural attachment to this area, notwithstanding that consultation with First Nations People is intended should the project progress. 5. Risk to local hooded plover population - as a daily user of the beach, I regularly see hooded plovers on Hallett Cove Beach during breeding season. The construction process threatens this endangered species' breeding patterns, as does attracting even more visitors to the area. 6. Conservation ethos - the construction of concrete seaside pools strikes me as being contradictory to the conservation ethos of the area. It also represents a visual blight to the natural beauty and amenity of the area, which is what draws people to this location.

7. Lack of requirement for a pool - our excellent Council already provides adequate swimming facilities and there are plenty of Adelaide beaches nearby that are suitable for swimming. I suggest there is no requirement to build a pool at this location - we do not need to be able to swim at every beach in metropolitan Adelaide. Indeed, artificially over-riding the natural character of the area to create the opportunity to swim seems to go against the conservation ethos of the area (as per point 6) and the City of Marion's commitment to the environment and sustainability. I am also concerned at the unintended consequences that a man-made construction could create - other areas of Adelaide are suffering the consequences of human intervention at beaches (we only need to look at the losing battle some suburbs of Adelaide are fighting with regard to sand degradation and erosion). I am concerned that construction of a pool will cause unexpected and unintended negative consequences for the beach and its environment, and greater problems for the long term. 8. Increased rubbish and pollution - the area is already heavily polluted with rubbish. As a daily user of the beach, I pick up large amounts of litter every time I walk along the beach. I suggest this will only worsen if a pool is constructed and even greater amounts of visitors are attracted to the area. 9. Lack of local support - during a tour of Glenthorne National Park with the Leader of the Opposition, he noted that feedback in support of a seaside pool predominantly came from people living outside of Hallett Cove, not local residents. I agree with this assessment. Virtually all the Hallett Cove residents I speak to do not support this project. It strikes me that this concept is intended to benefit people outside the area. In doing so, it will negatively impact the quality of life for local people, be detrimental to the liveability of the local area, and ruins one of the places in my suburb that I love most (and what attracted me to live here in the first place). I am disappointed that this concept is even being considered.
1.Cost - this project it's way too expensive $10.3M!!! with the ongoing annual maintenance costs of $$200K My question is who is going to pay for this? I bet in the end, the bill will be pass on to the Marion ratepayers by increasing council fees etc. do we need this? absolutely NOT! I'm sure we can find a better use of taxpayers money especially in the current economy when majority of people are struggling with day to day high costs of living. 2. Noise, pollution, crime. I'm against having competition pool in my area as this will come with increasing traffic, pollution, noise and crime. This will have a negative impact on quality of life for the people living in the surrounding houses 3. Huge negative impact on environment
The final price Maintenance cost Correct administration
Cost. Parking availability. Environmental impact
Wildlife, Ongoing Costs, Traffic & Parking
The large size of the structure, and impacts on the natural values of the beach.
Disability access and parking. General parking. Volume of increased traffic
Parking
Nothing
Irreparable damage The cost that ratepayers will bear the brunt of Increased traffic noise pollution to this quiet area
PARKING,PARKING and PARKING
Size and scale, cost

Cost blow-out, leading more burden for rate payers. Traffic management for larger number of visitors. Impact of natural habitat.
Too many people coming to the area (not enough facilities and car parking), safety of the pool for people, ruining the natural coastal landscape
Waste of rates money, lack of parking so why would we go there.
Carparking a concern. Security. Lighting.
None
Nothing
Insufficient increase in off street parking
The larger footprint, the higher cost/maintenance, and parking (which would apply to either size pool).
Nil
Cost yet needed fir area
Environmental impact Operational costs Lack of parking and disruption to local community
We are concerned about the risk to the stability of the beach if the bedrock is broken to accommodate the excavation. There is no provision for car parking for this project. On fine days, even in winter, the existing car parking is fully taken up. The estimated cost is out of proportion to any benefit, and the money could be better spent on more important projects.
1. Initially the extra attention it receives will increase parking issues. But I think these will settle down. 2. No other concerns.
It is not in keeping with the natural beauty of the iconic coastline.
Environmental impact on the conservation park; access to the car parks and the beach
Parking
Costs and on going costs
Disturbing the stable beach platform & consequently encouraging erosion. Destruction of world heritage geology. Destroying unique naturalness of beach.
No concerns
The high cost, which is not justified by the limited number of potential users. The impact on the environment. The ongoing maintenance cost, which will need to be met by rate payers.
Environmental impact, ruining the beauty of the cove, lack of parking
1. Parking - but that is an issue with both option 1 and 2 2. The pool is not cleaned naturally with the incoming tide but that is also and issue with 1 and 2 3. There are no further issues.
No concerns
Ongoing cost to ratepayers Parking issues Environment
Unnecessary & destroys the landscape, impact on wildlife

Parking
What happens to the sea side pool during rain and winter months? How is it cared for and maintained?
Ongoing costs and initial costing
No concerns
Environmental impact Not enough parking Cost
1. Risk to the environment. 2. Potential risks for unsupervised children. 3.
Cost, risks associated and potential to flood suburb with tourists and metro adelaide visitors.
Expect it will be far harder to get a park near the beach or cafe, so will be even less able to visit it with people who have mobility impairments than I am currently Given that the report suggests nearby streets will absorb parking requirements, and those are some of the main roads in the area (and are on bus routes), I assume that users of the pool are likely to affect the flow of traffic for local residents Impact to the natural landscape of the area, e.g. not clear how the view from the lookout to the north will be affected.
No concerns.
I don't believe a seaside pool is necessary or required. The cost is significant to firstly build and then maintain for something that will only be used for around 3 x months of the year. The parking review has indicated mostly existing parks in the local residential area, and I don't think this would impress residents of the area, and they are also up steep hills. There is no scope to add any more parking other than the few that were in the report. Visitors by train would also need to walk up and down steep hills to visit. The visual aspect is also not appealing to the area which is renowned for its natural environment and geological significance. This would ruin the current natural landscape which is what attracts people to the area. Whilst alot of people are all for a new pool I believe the novelty will wear off after a while. In addition there a surfers that use the point during stormy weather with the wave ending right where the pool is proposed.
Takes up too much beach.
Car parking, No other concerns
He length might put some people off and there could be a battle between those people wanting to swim lengths and those wanting to swim widths Limited car parking might put people off too.
Carpatking inadequate Tides not always adequate to refresh the water Limiting use of the beach for other activities
Nothing
Cost of regular maintenance Cleaning and supervision Vandalism
1. ZONING GUIDELINES AND PRESERVATION OF THE COASTAL AREA The City of Marion Development Guidelines and Zoning Objectives state that it: “Seeks that any development should be designed and sited to be compatible with conservation enhancement of the Coastal environment and scenic beauty of the Zone and should not adversely impact on the ability to maintain the Coastal frontage in a stable and natural condition”. The proposed large conventional concrete seaside pools over 2,000sq/m armored on the Cove beach

with ancillary works such as toilets, change rooms, lighting and access paths is not in keeping with the guidelines and zoning objectives of the City of Marion. In the past, Marion Council has made every effort to promote the conservation of this geological and unique cove to the entire state inviting students and visitors to this unique coastline. The pool protrudes at a size and scale from the embankment into the important geological foreshore that is not sited to enhance the scenic beauty of the zone. 2. COST AND ONGOING MAINTENANCE The feasibility study outlines that in addition to the significant up front capital costs of a conventional concrete seaside pool on the beach, there are also significant ongoing operational and maintenance costs to the City of Marion for many years ahead. This will create an unreasonable burden on ratepayers of the City of Marion for pools used predominately in the summer months. 3. ONGOING PARKING AND SAFETY ISSUES The survey projects a significant increase in annual visitation to the seaside pools during the summer months at Hallett Cove. This will further exacerbate parking problems that already exist in the small cove area servicing the popular Boat Shed Café and children's playground. The increased visitations in summer to the large pools proposed will create further parking issues for local residents. The Hallett Cove foreshore has historically had issues relating to anti-social behavior, particularly during the summer evenings. This has been a long term and ongoing issue for local residents and increased visitation to unsupervised pools will likely add to increasing risks of anti-social behavior and negatively impacting the amenity and safety of local residents.
Keeping the pool clean maybe this could be done on a volunteer basis
No concerns.
Littler / pollution from users. Parking. Maintenance costs. Decline in look over time.
Zero - or maybe the cost and affordability in which case option 2 is my next design preference
Good for summer
Parking and access to the beach
Cost Size of pool Impact (inc visual) on the foreshore
Cost - ongoing maintenance Traffic Parking Misuse
Childrens wading pool Childrens wading pool Childrens wading pool
Needs to be larger. Lap pool and suitable for children

Cost (though this is a beach-like experience and shade is not expected) Lack of shade Maintenance
nil
Parking
Cost of building and maintaining it lack of amenities, change rooms, toilets, lifesavers, lack of parking space.
Parking The boardwalk works must be complete before this really begins - the gullies being closed totlly puts me off from using the areaas cannot walk far in either direction.
The angel does allow much walking space going left off the ramps More seating areas needed No showers provided
What kind of interfernace on the seaside enviroment? Only underestimate cost $10.3 GST (how about maintenance) Car park
Spoils natural view Parking Litter etc
Too invasive
needs to be a couple of lanes
Health and saftey who will pay the money? Where does the money come from? Clean
Parking It being too busy, locals wont use it saftey as no life guards
No. This is an area that was protected by 2 brave women in the 70s. Has it been forgotten?
Nothing looks great
None
No related amenities (bathrooms etc) Requires significant investment (pump, maintenance works etc) Will disrupt the local ecosystem
Ruins natural beauty Commercialisation of area Unattractive
Where is the money coming from - millions How many people are going to use it, could the money be spent elsewhere Roads, education etc hospitals etc
Damaging the natural environment The ongoing upkeep and quality of the seapool Increased traffic
Cost! Use the money to help people with emergency accommodation
Not alot
Visually too much impact A significant natural cove is being changed into something very man-made looking when we have natural swimming beached north and south of Hallett Cove and swimming pools A lot of money both capital and ongoing. That money could be better spent.

What 3 things do you most like about Option 2 — 25m seaside pool and embankment protection?

decent cheaper option
Size, visual aspect and accessibility
Usable pool space Allowing lots of beach space left Kids area
Nothing
Prefer a 50m
Looks nice thank you
Less impact to the beach.
Prefer option 1
will improve the usability of Hallet Cove Beach, will provide a point of interest for Hallet Cove, and provide a safe and effective facility for exercise through swimming for people of all ages.
nice size blends in easy access
Good size for the "average" swimmer to do laps. Increase tourism. Nice to relax in, in the summer weather.
None
It's okay but why not have the 50 m if we build a pool
Would prefer option 1 but accept this option rather than not having the pool.
the open space
less visually impacting
Small pool, embankment protection, Children's pool
I do NOT support any type of swimming pool being built at HCB
If the 50m pool isn't a viable option from a cost perspective then this is the next best thing
None
Great to take the kids locally too in summer.
Smaller footprint but prefer the bigger pool
Option 1 is my preference but I'd rather have a smaller pool than none atall.
Most likely a cheaper option than option 1. Provides a better opportunity to swim at this beach. Aesthetically pleasing.
None of it
I like the size - great for fitness and recreation
See previous
1./ Provides community with an adult and children's wading pool. 2. Provides our local community with an infrastructure asset that is non-existent in metro Adelaide beach communities. 3./ Contours well with the outline of the beach.
25m is a good swimming length for all different swimming capabilities
Prefer options 1 for length of the pool, but still think 2 pools is a good idea as well as embankment parking
It will provide the health, social and economic benefits associated with investing in the seaside pool.

Still provides a pool Still provides coastal protection Right location
Would rather the 50 meter but this is better than not having a pool
Size and design
Still nice but needs to be bigger
As before, room for people
Doesn't impact the natural look too much.
Bring people. Bring profit. Bring fitness.
Best option for families
None
None as this will only cause more erosion
Love this almost as much as the 50m version, would be a good compromise for those who dont want one
More affordable than option one
I prefer option 1. But if not possible then same reasons as option 1 except for pool size 1. 25m is still a great opportunity for swimmers like me to use it... especially if there are lanes...
Best size for the most people. Best attraction to Hallett Cove. Best for promoting healthy living.
Nothing at all
That there will be a pool
Would prefer option 1 purely as it's bigger in size
I don't
As stated previously.
Good
Pool remains Still a reasonable length Accessibility
the location and orientation
None- 25.m is inadequate
Still better than option 3
It is a reasonable compromise. It is likely to be heavily utilised by residents I'm the warmer months.
Pool Fits well into local landscape More attendance at beach
Health/exercise Family fun Tourism
Less destructive to the landscape however if you're going to put a pool there, may as well do it properly and install the lap pool
Nothing
Creates community area for kids and teenagers
Nothing
Usable pool

Safe place for children to swim
Toddler pool Presence of sea side pool
N/A
See above
I prefer the longer pool
Great for fitness. Great for kids. Great for area
Same reasons as option one and its small enough to maintain
Same as 50m option, but 50m looks better and will allow for more users
Great to have a pool
It's a pool
Opportunity for exercise. Local family destination
I think it is a good balance of adding something for beach goers but not completely covering the rocks and tide pools.
Better than no pool, good to have children's pool, takes up less footprint than the 50m.
Prefer the larger pool, but still good to have smaller pool Preserves environment Unique to South Australia
25m would be my second choice but only if uses the space well and doesn't waste any to make it unusable
May attract more people to lap swimming as its less daunting that 50m, may be a better compromise for people who are concerned about a 'big pool', and 25m laps can still be used effectively for lap swimming
Having two areas to swim.
Location is fine, pool size is underwhelming.
A sea pool Conservation
A good second opinion but not as good as the first option in my opinion. If your going to do this project do it right a throughly at the beginning. Not half a job!
Size is nice, especially for maintaining it. Feels a bit more like the Edithburgh pool, which I really like. Nothing is different to pic 1, except the size and shape of the pool.
childrens wading pool
Similar reasons to my strong support for the 50m pool.
size
Pool
Prefer option 1, but would settle for 2.
Like the design also but option looks better
Nothing compared to option 1.
It is not large enough to be beneficial to the public
Great community asset
Prefer Option 1 for size, if we build it, lets do it right and make it 50m, but 25m is better than none
i like the larger one better
NA

Nil
Same as previous for option 1
Would prefer one but if we can't get that this would be my second choice.
Prefer the 50m option.
Will be great addition
Better use of the beach as can't swim in the sea due to rocks. May be better than having to drive to other areas to access a pool. Provides something else to do other than just playground
Nothing
Still has pool but consider it too small and inferior to opt.1
None of it.
As long as there is a pool. 25m is okay. Can get crowded.
Great pool
Embankment protection.
*
Think it is too small for the popularity of the area
Again enables people to swim at a beach that currently does not provide opportunity to do so. Smaller pool is better than no pool
Provides a pool and precinct protection
Looks nice Protects environment Great location
Layout is better than option 1 Useable pool in an unusable beach
Embankment, attraction and parking
Love it
A pool would make the beach completely usable which would be a huge benefit. My household would use it
Ok
I don't it is too small.
I would prefer the 50m option but 25m would be ok
Having a pool at HC being able to use the 'beach' More business for local places and hopefully more people move to the area for local schools
Reasonable size for general use. Doesn't stick out as much
It's still a pool
Pool Beach access Erosion protection
Not big enough
Beach becomes more accessible User friendly Family friendly
Great space for families Place to exercise

The shallow pool for families. The general location with proximity to the playground. The low tide exposure.
Integration with existing infrastructure Separate kids pool The inclusion of embankment protection
I would only support this smaller pool, if building the 50m pool was not feasible.
Still a great way to bring in tourists and money into the area
Location
I prefer the larger pool and the options it has for the kids and people with accessibility needs. But if Option 1 is not a consideration after consultation, I would still like to see the pool and this would be the next best option.
although I don't believe in a pool at all in this area, this at least would be better than the larger one proposed
Nothing. It's a farce.
Great addition to the coast line
Nil
None
I would prefer the 50m
Same as 1 but it's not as big.
Ocean lap swimming option without impeding too much on existing habitat
At least we get the pool
Look near the foreshore/beach
Not much...it's 25m bigger than option 3
The same as are mentioned for option 1. Only the larger size would be preferable to ensure it can cater for as many people as possible (large local population size and additional visitors)
NO POOL AT ALL
Kids wading area, the design of both pools
Small and convinient
The seaside pool still exists even if smaller
Would prefer option 1, but if not possible, option 2 is my second preference for the same reasons mentioned for option 1.
25m is more inclusive for all abilities of swimmers
Good feature for the area, family friendly and enhanced local area
Only as a second choice to 50m
Still great to have a seaside pool Embankment protection very important
Parking Self cleaning process/tidal fill process
Size of the pool, children access and embankment protection.
Still an option
Refer to previous comments.
Promotes healthy living; different offering to the other beaches.
I don't like
A differently shaped pool would be better for casual swimmers in general
Nothing

Still a reasonable size. Ok if option 1 not supported. Requires less servicing.
Protection Cost
Option 2 is better than no pool, but 50m is better for the community as it provides more space in the water for more people.
Perfect option 1
Support any pool over no pool, still a good design. Slip walk lane into the pool. That a toddler pool is still included.
Location, beach, pool
Pool Protection
Would still be happy with this outcome but prefer larger pool.
Prefer option one but this would be great too
Second preference Would much prefer 50m option for beach goers
The 50m pool would be better but this is second choice
I like the concept of having a look and wading pool.
We would prefer option 1 Will be very popular and may not be big enough, like the wading pool and more manageable size for children
'- design
25 m pool wading pool and erosion protection
This is my second favourite option
I don't like it
Size
depth
The sea side pool
Unique aspect, proximity to park and facilities
I like option one better. The pool would still be great to have. Embankment protection.
NA
It is better than no pool
N/A
Smaller but would still support this size Kids facilities Protection
Just the right size pool and hopefully enough parking
Pool
Visually pleasing
25m pool is better for recreation. Fits nicer and not so imposing on the beach.
Really like it. Same things as previous.
It's ok but not amazing
Same as what I said before but I think 50m would be better to give people more space.
50m makes more sense, however option 2 is better than option 3
Design, location, reminds me of Bronte beach rock pool

Great idea but prefer the larger pool option.
I do not want the pool at all
Embankment protection
A great asset to the community
NA
It's nice
Nothing
If a 25m pool is more cost effective I would rather that than none.
It's better than nothing but I believe too small for the amount of use/interest
It's OK
Still usable Design
I still prefer option 1 Option 2 is second preference Finally can swim at my local beach
As above
Build the 25m if the 50m is not supported
That it exists, something is better than nothing.
none
Nice planning for leisure
PREFER OPTION 1 DUE TO BIGGER SIZE
Same as previous
Embankment protection Children's wading pool The location
Do the fifty meter pool
location protection of the embankment
Same as option 1. A pool would be great
Same as option 1,its just smaller..maybe in a long run its going to be too small
Easier for younger kids
Cheaper than 1
The bigger the better
It is a pool on the beach.
Similar to 50m pool but not as user friendly Would be very over crowded in peak times No as good for schools and sporting groups
Less expensive Less environmental damage Less people
ok but small
Able to swim at hallett cove beach
Something is better than nothing. But 50m should be the preferred solution.
This would be a happy medium on cost of construction and maintaining annually
None

1. Will allow disabled persons to have access to swim 2. Will add to the amenity of the beach 3. Will allow children to swim Safely
25 m pool
Nothing it'sa waste of time go 50m
Seaside pool is needed in Adelaide. Good attraction for local areas businesses. Size is better than option 1.
Pool isn't long enough for Vac Swim, Lifesaving training interschool races etc.
This may be more palatable to the naysayers as it has a more modest footprint.
That there is a pool Wet edge
Using most of the space available, seaside pool, protects embankment
We prefer option 1
I am happy with option 1. Long term a larger pool provides better coastal protection at 1a Heron Way. If it's to small it restricts public use of a much needed public facility. Consider this Henley Beach had such a pool for years that was used by all kinds of public groups. It is now no more, which is a pity.
Aesthetically pleasing Size seems more appropriate to the location Wading pool
Any seaside pool will be a great attraction to the area. Increased cash flow to surrounding businesses. Safer place to swim.
Use of the space Views
Nothing Nothing Nothing
Cost, less impact, has sufficient facilites
Having a children's pool. Embankment protection (all options) While I prefer option 1, if it's between having option 2 or no pool, I would take option 2.
N/A
It's okay
Infinity edge on orientation. Better than nothing.
It's an alternative to the larger pool but I think the larger pool is the better option
Same as for option 1 but option 1 is the preference. However, any length seaside pool is better than none.
At least it would be sea pool but prefer Option 1.
I prefer option 1 but also like this option
1. Option 1 is the best option, however Option 2 is the next best option. 2. See Comments for Option 1. 3. A pool is better than no pool.
Smaller therefore less cost. I am mostly interested in the children's pool
I just like the fact that Hallett cove may be able to have a sea side pool. My kids swim in water with their friends off the rocks at far end of the beach. I'd much rather they swim in a pool.

Safe swimming
All the same 3 reasons regarding option 1 do apply to option 2, however option 1 is a far better use of the space and visually appealing
It is better than nothing It may help solve the beach erosion
Also a good option
Too small
Wet edge entry to pool. Same as 50m pool.
Wadding pool Protection The fact there will be swimming available
Location, Location, Location
2 pools means people can spread out more in peak times. I like the wading pool for both options.
Being able to swim for exercise.
At least we get a pool. Better than nothing but 50m is better
Fallback option to option 1
Allows for a swimming.
Prefer bigger pool
Caters for Lao swimming Caters for families
Less cleaning for lifeguards.
Still great having a pool
Only support this option because option 2 is better than no pool, if option 1 does not get passed.
A beach pool is awesome
Lap swimming, recreation, family friendly.
Think if you are going to do a pool..make it worthwhile I.
1. Greater offering to the public as anew tourist attraction will be provided. This pool has the opportunity to significantly increase the presence of Hallett Cove/Marion Council in the wider South Australia due to its uniqueness. 2. An attractive alternative to a sandy beach
Prefer option 1 although this is great too
Looks good
Still a place for people to use
Same as option 1
Same as in previous answer
Too small. Balance between children's area less obvious. Less likely to utilised.
It's better than not having anything.
A small teeny pool is better than nothing I guess
Pool too small to exercise in and will get too crowded
Everything. Hallet Cove is losing its natural environment.
Location, looks great, good for kids
Smaller than the 50 metre pool.
Would prefer 50m size pool for the community
Option 1 or 2

My first choice is for the 50 m seaside pool option. It will help with the embankment protection and support - but the 50 m option will provide a larger footprint and more embankment support.
Secondary choice-
If it's this or nothing I'll take this but would prefer 50m
None too small
Nothing
N/A
Free swimming, smaller footprint,
'- moderate option - less impact on the natural shoreline - lower maintenance costs
Nothing. Limited use. Only useful splashing around and cooling off.
same as my previous comment
Provides a smaller area to swim Less funds More plant protection
The general concept.
prefer 1
Great for children Good for lap swimmers Good for environment
Free pool to train in. Can swim at Hallett Cove beach. makes suburb more attractive
Pool good for kids;
Same as previous response though I believe the 50mtere pool is the preferred scenario.
Not as good as the 50 m pool but still good. Looks nice Will make Hallett Cove an attractive area to live in with a local swimming spot.
I think this one is more visually appealing than the 50m option. I like that there is a visual balance between the kids and adults pool. However this is outweighed by the benefits of a larger pool that would allow more swimming space.
nothing to like about option
I would prefer option 1 but this would be a suitable alternative
Looks
Too small
Option one
Nil
Second good option, good for community
Smaller
poor design
n/a
same as option 1 - I prefer option one, but option 2 is better than nothing!
Safety of pool
Its a pool at least
Still get to have a viable swimming option, although a bit smaller, may suit the amount of parks and support visitors a little better

Great for kids,
Same reason as option 1
As mentioned before it would be an attractive addition to the area. But if you're going to do it, do it properly and build the larger one.
it's still a pool fun in hallett cove it'd be enjoyable i think
Nothing it will ruin the view
It's an option.
Not adequate
Concept and design
The pool
Same
'- Easier to supervise - Potentially less risk with less depth - N/A
Just like the fact there would be a pool. No other points to add.
More suitable for changing use during the day, ie laps when less busy & general recreation during busy times. Less potential storm impact to NW corner of the structure.
Still a good sized pool but may not be big enough of lots of people want to swim laps.
Pool
Less expensive than 50m Useable beach Embankment protection
The views that present
It's a good compromise It could be better for general swimming rather than lap swimming
Same as in option 1
Good option to have Will be popular for our young people Maybe not so many crowds
'I like the fact it is - join to a kids pool like option 1 - cosy - and close to the ocean
Spend the extra money for a decent size pool for the future.
Will attract people to the area.
Better than option 3 , no pool ! We need a pool
I like the 25 metre pool concept facing east - west for lap swimming, access ramp is easy.
Access to beach - wading pool - swimming pool
Prefer this to nothing. Better than option 3, but prefer option 1
Will provide protection against coastal erosion; more cost effective to build & maintain; good visual appeal.
suits those who prefer 25m training lengths
It's a good design It will attract people
protection & size

Integration with land/seascape
Smaller than option 1, but still great Wading pool fantastic for kids Making Hallett cove beach more popular
Little bit smaller and less of a footprint but still prefer the 50m
Attention it will bring to o hallett cove beach, foreshore enhanced
This is my preferred option. Ticks all the boxes. Caters for the community without severe impact to the landscape & surroundings.
It's a good size pool that allows multiple usage options. Allows swimming in an area that is less safe in terms of swimming. Less expensive than the the 50m option and a smaller footprint.
Less impact then option 1
In option 2 there is a bench but in option 1 there is not. There is more ground stone so the water won't come into the pool.
Smaller cost - initial and ongoing
It's better than no seaside pool
None
It will still provide the same opportunities that the 50 metre pool will provide, but will just have half the footprint.
Looks aesthetically pleasing and blends in with shoreline . Concrete steps good for people to sit and view pool . Embankment protection important to protect the area from erosion .As with
Better size. Good layout Just enough I think
Prefer option 1 but this is my second option.
Best size option for least environmental impact
Same as Option 1 just smaller
Size. Embankment protection. Location.
Lap length not long enough Overall capacity too small
Prefer a larger pool as I know it will be popular with the community
none
1. cheaper.
Id rather a bigger pool
Second choice to option one
Not as good as 50m bit better than nothing
Same as option 1
That it's a sea side pool Major attraction for our beautiful foreshore Embankment protection
Shorter pool to swim
Prefer option 1 but option 2 is btter than no pool atcall.
It'll be better than nothing. But it'll probably get really crowded.
Similar too option one
Both
Space for local families

Not as large as option 1 but still desirable
Pool
See answers to 11 above
Too small
Prefer 1 but would be ok rather than not have one at all :)
Pool Erosion Protection Kids pool
Nil
Good to have the embankment protection.
Too small
prefer option 1.
Bring more tourists
Next best option after option 1
It looks more natural than the 50m
Still a seaside pool
Size
Same issues as option 1
Size of pool Kids pool Aesthetic
Traffic parking rubbish
Would prefer option 1
1. Good for lap swimming 2. Good for local business as more people will come to the area
A 25 m pool is better than nothing, but 50m would be better, I just think with the amount of people this development will draw that a 25m poll will be too small.
Better than nothing.
Good size but unable to be subdivided into swimming and non-swimmer areas
Les ms costly than 50m pool.
This would be a great option over no pool
Options are not a good as Option 1
Nil.
Small pool not as usefull as the larger
if 50m is unable to go ahead a 25m would do.
See previous comments.
Appears closer to pathways. Perhaps less obvious.
None
Poo is too small but will accept if option a is no go
Size of pool Size of protection area Look
It does not impact the space as much, it still looks good and it will still provide a safe place for swimmers to use.
Nothing.

Looking good, good location, value for money
Smaller option But still expensive for few to use.
It provides an active space for children and adults.
It would be better then nothing
Better to have a pool than no pool
At least there's a pool but 50m will accommodate the number of users of whom there will be many.
N/A
Same as option 1 just not as ideal for lap swimming as 50m
If can't do 50m pool
Strong case but lesser than option 1
Pool and children's pool
I don't.
Less impact on the coast
The option to have a sea side pool
That it will be too small for the intended purpose
'- cheaper - kids pool
Make the area more of an attraction. Modest size. Still looks nice.
The potential for a free swimming facility in Hallett Cove Design sympathetic to the environment Probable positive impact on the local Boatshed Cafe business
A good second option
Smaller footprint. Lower costs. More widely accessible.
I believe this would be a better option
Go for a swim
Smaller, better for visually impaired people.
As per option 1 but is less desirable owing to shorter pool and therefore greater "traffic" within the pool
Totally opposed. Far too small.
Potentially more cost effective. Still likely to boost local business and tourism. Family friendly fun.
I don't
Too small
Prefer the larger size pool but a smaller pool better than nothing
Same as first one but will be smaller making it less user friendly for more people
To small
It seems like a compromise option 1 is much better
Still a good option for all residents
Do not like the fact it is not 50m.
better than nothing
I only want the 50m
Safe for kids to play
We get a pool

Same as previous but not the same amount of space for users
Nothing
Safe swimming for kids
May be more realistic from a budget perspective. May be less of an environmental impact compared to option 1
As an alternative option Half the size and limited no. of participants
The pool
Look good Still protected
Same as 50 metre Safe place for families to swim without worry of rips and marine life Protect embankment
Still a large pool, but option 1 is better for the expected traffic and usage
Location and environmental concerns catered for.
It's ok as a second option
Option 1 is by far the better option.
design and location
Smaller and less intrusive on Coast line. Takes less off coast up. Smaller to maintain.
Still a pool though obviously not as big
Impact on environment.
Space for young families and children Space for recreational swimming
This is part of the conservation park
The same as Option 2
great opportunity to swim in the sea water
I think the bigger pool would be better. If you're going to do it may as well accomodate the people. Due to there not being another one in Adelaide people will come from far and wide.
1. Seaside pool! 2. Embankment protection 3. Exercise opportunity!
A pool this size would be great. Actually having a see side pool in metropolitan Adelaide. Having a pool that's free to swim at.
Look, size and overall appearance
Not much but better than no pool at all
There is a pool, the smaller one for play, may get sand back on the beach
fits better into to the landscape, less obtrusive, and a reasonable size for the community to use
I prefer Option 1, but anything is better than Nothing.
Nothing
A 25mtr pool would be used for family enjoyment, we take our grandkids already to the beach there and having a pool would be excellent.
Same as above. I like the stone wadding pool.
Doesn't overload the space. Options for accessibility

It's size Inclusiveness Multi functional
Nothing
Functional pool. Clean appearance fitting with the surroundings.
Community utility Good for kids Exciting development
Only if Option 1 is totally not feasible.
I prefer the bigger option. Seems most economical
There is a pool and a toddler pool.
Embankment protection is good
Not bad
Provides a nice recreational space. Maintains coastlines without significant impediment.
Size Location
Prefer option 1, but option 2 is good too
Kids Pool, embankment protection, location
'-I like that it allows for the construction of the seaside pool to go ahead -The location -The principle behind the design
Nothing
It is a pool Minimal environmental impact
Size Design Location
position, appearance, cost
N/a
None
i dont i want to be able to do laps and its too short its the cheap option
That there are two sized pools
Nothing
Well it's better than nothing.
It's better than no pool at all
That there still is a pool
Kids pool Erosion/environmental considerations
More achievable
Pool, use of space, wading pool
1. It's a pool. Better than not having one.
Good facility
Good cacility
It's better than nothing.
a safe pool for all ages and abilities, easy access, complements the existing facilities

embankment protection.
Looks good. Blends into surroundings.
Pool for swimming
Answer similar to my previous answers on option 1
Preferred option one but would go with either if it means we get a swimming area for families and young children
Size too small
That a pool is being built, but it is not big enough.
none
That it exists Location
If my preference of a 50m isn't approved, then this is second best
1 access and seating 2 embankment provisions 3 parking
slightly cheaper than option 1 Still a great idea
Close to home, wall
Pool versus no pool.
Size and proportion are suitable for the location and local needs
Smaller footprint Less costs Seating
Same as the previous answer
the size, protection of embankment, the position
I prefer the 50m.pool.size but 25 is ok. However make it 30m and have a section that is 25m. This way people can flop about but lane swimmers have a clear 25m. Bronte pool in Sydney is like this
25m pool would be great but 50m much better.
Would be great for the community Addresses environment Good use of cove
2 pools.
Wading pool Opportunity to swim
Do not agree
Cost cutting
Better than nothing.
If option 1 is not recommended, then option 2 would be better than nothing.
Sufficient sized though 50m preferred.
Accessibility. Children's wading pool.
1. Less expensive to first option
Not sure that size would be big enough
It's smaller than option 1, it's still not a reality and ….it's still not a reality
A good compromise if option 1 not able to go ahead
Smaller footprint than option 1.
Safe swimming

It will be a great asset to the Hallett Cove beach. The length of it means less expense than the 50m pool. It could be used for swimming lessons to cover costs.
Nothing Don't support the pool Looks ugly
Like the bigger option
Still ok with option 2, but still much prefer option as it's bigger & can accommodate more people.
Protection against erosion
Safe swimming environment Safe water activities for children Non chlorinated
As per option 1.
If you are going to have a pool go bigger. Alot of people will come from all areas to see and use it.
Not big enough, not much cost to do the bigger pool
The Pool (no matter what size) will be unique and add value to the area. Reduced footprint - although the impacts of footprint size are still unclear. Children's wading pool
No comment
Do not like option 2
Nothing
I love the idea of an ocean pool, to be able to swim in ocean water and not worry about sharks or jellyfish.
None
It provides a swimming area for local residents (and/or tourists in the area) to enjoy.
Prefer option 1
nil
embankment protection from erosion separate safe childrens pool
Similar to my response for option 2
Enviromental protection
Fresh salt water Location Safety
Prefer option 1
This option is not my preferred option given the marginal difference in cost for a 50m pool. Surely we've learnt from the southern expressway duplication project?
I like the two pools but they seems a bit pointless having two ver similar in size
Same as previous answers supporting a pool however I believe a larger pool is needed and will be beneficial
1. Access to swimming pool 2. Improved appearance of foreshore and beach area 3. Smaller project cost
Suitable for young people Free Open all year
Good for families
Smaller pool. Not good enough Ki
Only in favour if the 50M pool not proceeded with

Nothing
As previous response for option1 yet swimming access reduced due to smaller pool.
Pool for lap swimming
Great for swimming It would blend in more naturally than the larger pool Less impact on the environment
It will be great to have a pool at Hallett Cove beach. The pool looks good. Great to have embankment protection.
I like that it is an option. I also like that it will provide a place for hallett cove residents and others to swim as the beach currently is very rocky and can be difficult to navigate. I like that it has embankment protection.
having a pool is a positive
Same as option 1
Cute, but too small.
i don't like any things about this option in relation to option 1
Better than nothing!
It's okay but not as good as 50m
none
Having a pool better than no pool at all.
Don't like pool idea at all
Less intrusive Size Leaves more beach
much rather 50m than 25m, if you are going to pay money might as well get a 50m
Nothing
It's nice and cosy
Nothing
Prefer the 50m pool but this second choice.
cheaper to build
1. I support the embankment protection. 2. I like the idea of having a beach pool in Hallett Cove with the children's pool, I like the design. I also think the 25 metre pool is an adequite size for swimming laps back an forth. 3. I think the children's pool will be great for children to be able to have fun in the water as currently the beach is very rocky, (which adds to it natural charm) but limits access to swim in the sea particularly children.
'- Still a good swimming area - Promotes Hallett Cove Beach - Promotes Hallett Cove Cafe
Pool present Nice aesthetics Env protection
better than no pool at all but i prefer tge larger option.
NA
1 if 50m not possible, 25m would at least provide a pool 2 potential for maintenance on smaller pool to be achieved 3 embankment/ environmental protection

Adult pool Children's pool
Second favourite
Nice pool design
Would be Okay if that is all the council can afford / gain agreement.
Similar design, plan and embankment protection consideration
Bigger pool would be better
N/A
It is a seaside pool and it's aesthetic.
Looks good
alright for laps
It will be a safe refreshing place to swim
Nice looking
its a pool protection for environment community activities
Has two good size pools. Looks nice. Room for kids and adults
Design does not appear to fit as well into the landscape and additional embankment protection would be needed. Smaller size would likely get crowded quickly in peak times of the year. Additional capital and operational costs are suggested as not much more for this option so go going bigger will future proof the infrastructure.
'-
This would be better than nothing, but once again, is not big or bold enough to cater for the local community (or what the local community might look like in 50 years!).
NA
Prefer 50m pool
More cost effective then option 1, still option for open water swimming, both pool type for adult and chikdren
None
If option 1 isn't chosen then this would be my next preferred.
like that it costs less but that's only because it is smaller
Still has room for rock area Smaller size for children Good space left over for other activities
Great idea love the whole concept but to believe a 50 would be better
Cheaper building and Maintenace costs
25m pool will be too small for large groups so people won't come or be on top of each other
Wading pool size and completely unnecessary. Stop messing with a beautiful, important, natural, environment.
Pool
Too small not enough usable space
If going towards a pool may as well go for the larger one
None of it
Great for families

Makes use of a somewhat unusable beach Second option if there isnt enough funding for option 1
Second option im in favour of- if the 1st doesnt come into furition
Pool will be lot of fun in hot summers
Lovely swimming pool
Enough room for leisure swimmers. A set area for young children. Less expensive than option 1
Pool
Too small to be of wider community use
1. coastal protection
Nothing
Provides accessible swimming and pleasure activities for a range of users. Less impact on environment than Option 1 - though probably not much.
A fall back option if option 1 does not get up. Also as with option one provides another fitness and community option and way for people in our area to meet and interact.
Unsure
none
Embankment protection
Whilst I would prefer the bigger pool, I much prefer this option to option 3. There is no point in option 3 and I am a firm supporter of the sea pool!
I like this option best less impact on parking and the look.
Slightly smaller footprint. Integrates well with natural features and existing natural and man-made features. Cheaper initial and maintenance costs.
Possibly less impacting visually.
25 meter pool is not a sensible option, when it's hot there will not be enough space for community members to move freely also this is a safety hazard. South Australia is deprived of access to 50 meter pools. swimming will benefit enormously from having a 50m pool. For a lot of reason. 25 meter pool is just a major waste of money
Prefer the larger size but would be better than not having anything. Adelaide lacks real tourism options and things for families to do compared with other states. Hallett cove is not a great swimming beach so would be nice to have that option here.
Nothing
To small size not enough space size depth and width
The difference in price is too small not to utilise the bigger option
Same as previous
Safe swimming environment for children Ties in with existing development. Increased tourism and amenities Increases accessibility to swimming and aquarobics for elderly and disabled people.
Options for range of users, disability access, natural base to children's pool
This is a good short term plan, it is better than nothing. It will provide recreational benefits and be well utilised but like the playground on weekends-our growing population will inhibit accessibility. Both plans will increase family swimming at a beach that is currently not easily accessible
Like option 1 but smaller
Size will have less overall visual impact
Still great as it provides a safe swimming option here

not cost as much as option one less crowd less noise
If Option 1 was not approved, it would be better than having nothing as a swimming facility in the area.
It's a small version of a great idea
1. Embarkment. 2. Better than no pool.
Children's wading pool, at least some pool, less impact of waves
None
It's still a sea pool
The concept is appealing
Like the option. More space in 50m pool.
Better than option 3 Cheaper
That it is a beachside pool. The size in insufficient for the proposed use, but it is better than nothing.
Same as for Option1 except I have some reservations about whether it will be big enough for the community
Same as option 1 however this is my second preference, as why go small when you can go bigger and ensure the whole suburb and neighbouring suburbs are catered for. It also ensure you do not risk having to extend it in future, as what happened with the southern expressway.
Smaller than option1, Improved beach access, improvement to embankment protection
Not as good as option 1 but still useable for general swimming. May be used for surf lifesaving competition but unlikely. Can be used by young families.
I believe the 50m would be better. It would be utilised more because of its size.
Prefer op 1
Great for families.
Enhanced Recreational Space: The 50m seaside pool provides an inviting and safe space for swimmers to enjoy in a stunning coastal setting, encouraging physical activity and recreational opportunities for locals and visitors alike. Increased Coastal Resilience: The embankment protection associated with the seaside pool helps safeguard the coastline against erosion and storm surges, preserving the natural beauty of the area and protecting nearby properties and infrastructure. Tourism Attraction: The combination of a seaside pool and embankment protection creates an attractive destination for tourists, contributing to the local economy by attracting visitors, supporting local businesses, and boosting the tourism industry.
Looks good - but Option 1 provides a better value for money approach
Like option 1 better
It still includes a seaside pool despite it only being 25m long. It's important the embankment protection is in the plan along with the children's wading pool.
Only if a 50m is not possible
It's compromising between Opt 1 and 3
protection against coastal erosion
None
none
Having a seaside pool at Hallett Cove, slowing erosion, caters to all ages
Same as option 1 but to a lesser extent

Allows short lap swimming. Would be good for kids. Easier to supervise.
Nothing
Same as previous
Embankment protection is the only attractive result of this project.
If this is the only option then this would be fine, but the 50m would be better
It's the fallback for option 1 there fore better than no pool Has the same benefits as option 1 but less wow.
I dislike all aspects of Option 2.
The only positive aspect of this option is the embankment protection that the design affords. I see no other benefit to be gained for local resident of Hallett Cove by the construction of a seaside pool at Hallett Cove Beach.
I don’t like anything thing about this option and I strongly believe that This project is way too expensive and it doesn’t have any sensible justification why is needed in the Hallett Cove.
None
Affordable cost in the build, maintenance and use.
Smaller size, planting and habitat zone
As per response on option 1
Zero
More appropriate size for the area
Less impact on environment. Less financial burden compares to Option 1. It still includes children's pool and offers embarkment protection.
do not support
Don't like it.
Option 1 looks better for me
Would prefer the bigger pool
The lower cost and lower footprint, perhaps less appealing in terms of larger crowds.
Prefer option 1
Pool merelu adequate
We get a pool
1. It’s an improvement but think it would be regretted that a 50m wasn’t built.
Nothing
Provides a safe place to swim and makes the water accessible
Nil
Nothing &
Prefer 50m
Nothing.
1. It gives residents somewhere to swim on a beach that is not really 'swim friendly'
Great facilitiy Will bring water use to hallet cove
Useable pools in hallett cove Less impact to area Community engagement space
Less ongoing costs

It's just a bit smaller..I still like it.
The cost between 1 and 2 is negligible in the grand scheme so if we are going ahead with this, let's do it right the first time.
Builds community Free
Same as before but prefer 50m to allow more people to use the facilities
The length of the pool is more appealing to a wider group of people
As per previous comment
Similar to my response for the 50m option. This could be viable as well. It just may be too small.
Please refer to my previous response regarding the 50m seaside pool and embankment protection
Better than option 3.
Option 2, while still fabulous, is just obviously not as accommodating to as many people at once.
It still offers as per option 1 just smaller It still contributes to community use/enjoyment Still offers coastal embankment protection just smaller
Nil
25m seaside pool 25m seaside pool 25m seaside pool
That it is still a pool - just smaller Reduced cost Better protected lap lane
Pool
same as page 4
Having a pool childrens pool
A good negotiation with a smaller footprint for those still concerned of enviromental impacts.
1 Support 2 if option 1 is not feasable
Open to all ages/families Makes Hallett Cove an attraction
Visually Appealing Non - invasive Good to have a pool here
too small
Pool included like the two pools
It looks good will get usage
As per option 1
Comment – there is plenty of things for children to do in this area both at the beach and surrounding Hallett Cove. They don't need a wading pool

What 3 things concern you most about Option 2 - 25m seaside pool and embankment protection?

Visually ugly Traffic and parking Ongoing cost
lane length not long enough
Too small
Lack of swimming options Lap lanes too short
N/a
Might not be used as much for lap swimming
Less space for people to swim in.
Not large enough to accommodate interest
Too small. doesn't look as good and limited for exercise related swimming.
may be a tad to small would prefer less concrete lap swimmers miss out
Cost. Ongoing cost. Ongoing maintenance.
The impact on the environment/amenity, the ongoing costs and parking issues.
No option to do laps
Not as cost effective as option 1.
space can be utilised better
Disruption and waste from construction
Not enough room for everyone come summer time, overcrowding injuries
25m may be too small?
See comments from option 1
I feel it is too short to be used by many people for exercise. It will easily be crowded in summer. I am unsure if having this is worth the effort especially with potential parking issues.
Serious swimmers will go elsewhere
None
Cost. Not enough space for people compared to the first option.
As before . Waste is f money as totally unnecessary. Spoil's beautiful unique cove . Traffic and parking already problem.
None
Nothing
Having grown up and regularly utilized ocean pool in Sydney, a 25-meter pool can be restrictive for exercise purposes.
N/A
Overcrowding of both so people won't be able to lap swim. Parking
Parking and changing room - I don't have many concerns with the project
Pool too small Parking provision Safety of swimmers
too small, what's the point

Not suitable for that area and not enough parking, waste of taxpayer money
Nothing
To small
Cost for residents, parking and environmental impact
Parking
Not big enough. Shutdown due to damage or not used correctly.
Nothing
Pool will be consistently crowded due to smaller pool size.
1 the pool and the embankment protection will only cause more erosion 2 wait for the decision of Govt re sand replenishment of total coastline before causing more damage
None
1. 25m pool is too small to incorporate good swimmers with general users
I have no concerns.
This beach is unique. A pool could be done at any beach. This one is adjoining a conservation park, and in light of this discussion it should have been included in the park.
It might be too small
Might be too small for all to enjoy during the warmer months.
The pool(s)
25m isn't very big, would be better to have the larger option if following through with this plan. As stated previously.
nothing
Shorter length Less room
The size, access and surrounds
25m pool is completely inadequate, the cost of chang thar instead of doing 50m initially will be ridiculous
Additional parking will be necessary to support an increase in visitors to the area.
Pool not large enough and in 2 years everyone will asl why corners were cut. Cost Carpark
Not large enough for the entire community. Funding source.
Parking
See comments made on option 1
Destruction of the intertidal reef Changes to sediment and wave dynamics will cause erosion further along the coast where it currently does not occur Increased potential for litter from pool users will enter the ocean
Cost of building and maintenance, safety
Size
Same as option 1
Too small
Same environmental impact but smaller sized swimming atea
Parking
Same as I answered in the previous section

Too small Parking
Too small Likely to be crowded Looks odd
This looks like a cat litter tray. In addition people with take shits in it and there's no cat parking. LOL!!!!!!!! Wouldn't you actually solve that issue before this horrendous consultation.
Size of pool for large volume of patrons
None
Deterioration and upkeep costs
Same as 50m option
It looks too small
Environmental damage and damage to coastal reef. Will end up with another West Beach disaster
Disturbing beach
Parking availability.
Same as option 1
Lack of parking
Prefer the 50m pool
Im concerned about the environmental impact as it does cover some of the tide pools.
Not big enough to cater for a high volume of people in summer, costs almost the same as the 50m - might as well go bigger to begin with, cost more to divert the outflow and more complexity.
Parking Business of the area
Less space for swimmers, can't be used for swimming events
As with option 1, how the facade looks in conjunction with the surrounding landscape.
Not going to have the same appeal as a larger pool
Size of the pool - will possibly be crowed on a hot day
The size is too small for the number of families in the area
In my opinion not big enough and doesn't give people options elderly and children areas to swim
Same as I said about option 1.
Parking
Not big enough for the height of summer.
size, shade and security
Not enough space for the broader adelaide visitors
Not big enough.
None
The cost compared to option 1, when the pool is half the size.
The cost v rewards are not balanced
None
Per Option 1, In the artist impression/drawings both designs appear to have a spike like balustrade/seperation which looks unsafe and maybe for visual appeal, but doesnt seem practical.
Too small
Too small to accommodate all the visitors If you gonna make the pool, might as well do it larger
Could become too crowded, especially for younger children

Not as big as one.
Environmental impact
litter and parking
Pool too small, too close proximity to others.
Parking, locals resident, the waste of money for a small town who have more cold days than hot. It's protected land and tax payers are just wasting money on something that will not be used regularly. It's not Bondi
Pool too small
It is an historic area and should not change. We should not interfere with the environment. It is a unique area. No money should be spent when there is already a pool in Marion, especially in this economy.
Crowding in summer.
Smaller than the 50m one, it will get crowded
I think the pool is to small
The exact same reasons I am against Option 1. The impact on the natural environment, marine life, wildlife, traffic congestion, damage, increased rubbish, noise impact. The list goes on...
Budget costing is not available. Budget costing for maintenance of said pool is unknown. Parking. Maybe noise issues.
May not be big enough to support the community
Reduced size means reduced capacity or overcrowding
Too small for laps Not as much area for leisure Feels "half the size"
Environmental impacts and rubbish Parking issues Cost going up on our council rates
Nil
No concerns
Bit short and not big enough
Not big enough, go with the 50m option.
None
Not enough room for people Can't swim laps
It doesn't look big enough
Environmental impact
Parking
Accessibility Car parking Community acceptance
Doesn't look like it could easily support disabled access. No change rooms. Parking situation not addressed in proposal.
Same answers as previous question re 50 metre pool
Adequate parking. Noise pollution. Either go all in with a 50m or not at all.

Smaller size could end up being inadequate That additional parking will likely be needed
Too small for an outdoor pool
Car parking
Impact on beach Impact on coastline Impact on street re parking options
Size, orientation
Carparking and ensuring this design does facilitate accessibility needs for people and families have that mobilitiy issues.
Water quality with only using pumps - it will be a costly endeavour and has the potential to fail often not to mention the eco footprint of having to run the pumps (energy source). Disruption to the longshore movement of sediment and sand that will impact other adjacent areas, particularly the small bit of sand beach at the north end of Hallett Cove that is within the nature reserve. This is just a seasonal pool to be used most likely only about 4-5 months of the year. The rest of the year it will be under-utilized but require high costs to maintain.
See comments on option 1
On the smaller side for big surges of visitors to enjoy during summer Parking spaces Shower and Toilet Facilities
As per comment for option 1
Not adequate for purpose
Environmental impact Safety to users Hygiene
Would get too congested
Coast protection Residents impacted by increased invistors Lack of parking
Pool will be constantly overcrowded during summer as it is not big enough to accommodate all the locals who would like to use it.
Lack of parking in the area
Crowded, water quality, value for money - all that money for a pool that's too small.
Size will be restricting during popular periods and detract from people's enjoyment of the facilities. Same other concerns as option 1.
EMBANKMENT PROTECTION YES
Depends who maintain the pool
Not big enough for numerous people to use with sufficient space
Parking (same as option 1)
None
Parking, noise, rubbish
Same as previous option
Doesnt cater for all types of users eg lap swimmers and not sufficient space for busy weekends
Parking
With all the money to build the pool I think 25m will be too small
Too bright and drinking parties.

Same as the 50m pool.
Parking availability, toilet facilities
Too small
Refer to previous comments.
If you're going to build a pool it might as well be a decent size. 25ms is small
Environment protection; toilet access.
Only that it would limit the amount of people able to use it at once.
Same as option 1
Too small. Will be overcrowded. Will not generate sufficient patronage to support other services.
Length
Not big enough for the numbers who want to swim
Not big enough
It may get overcrowded in peak season. Per comments for 50m pool, safety for children/non swimmers/intoxicated people. The use of the pool for homeless people to bathe. Water quality.
Size, safety,
Traffic
Too small
Not enough space for population
Pool not big enough to cope with amount of users
Increased number of visitors to the area and whether there will be suitable parking or toilet facilities. Also concerned regarding impact of increased traffic.
Too small for the community
Small pool
Same as option 1
Too small a pool
None
As per previous
To small for the area To small for people Just think that a bigger one would go better
Same as option 1
Same as my answer in question one.
location
Sand erosion.
Eye sore, mucking around with the natural beauty
It'll be too small and be too busy too quickly deterring people from using it
Size of pool, limited parking, environment impact
It's a bit small but better than no pool.
Destroy the wave off the point with a pool in the middle of it
NA
As per 1
Needs to be bigger 50metres to make it worthwhile

The smaller pool looks a bit harsh and looks more like it was just plonked there. Not enough space especially during holiday periods
Impact on natural environment Visual impact No mention of impact of rising sea levels on pool, only impact on embankment
No concerns
No concerns
Not big enough to gain national attention
Parking and congestion
Looks ugly and will ruin natural view
Too small Position of pool facing sea
Not so much space for swimmers. Might fill up fast and be a bit gross
It's not as good as option 1
What I wrote before for option 1
No large enough to support demand
The small size and over capacity
Not enough room = higher prices and/or wait lists to join clubs or groups using the pool
The same as before
It will be an eye sore
Car parking Use over winter Maintenance
Impact on environment
Car park is too small
Too small for the community, if you are going to do it, do it!
Waste of money, lack of parking and building something that's not nature in a protected area
Is it big enough
Too small for the interest, not large enough for lap swimming, will be inadequate for the community use/need but better than nothing.
Same for prev
Too small for lap swimming. Just spend the extra money and build a decent sized pool. Plus it doesn't blend in with the surroundings as well as the 50m version that runs more parallel to the shore.
Too short Facilities Maintenance
Nil
Still be too small in peak times
Environmental destruction of a unique beach , cat parking issues
Too small and will be too busy
Parking cost spoiling a beautiful beach
Location directly in front of the playground- kids would likely go straight down in to it Wheelchair access/ access in general Parking
Nothing
Parking, inappropriate use of this particular beach, environmental issues

Safety and security.
the design is too small to safely accommodate users during busy periods
Restrictive on space. The more space the better! The Coogee pools are always packed in Sydney
Same as previous
The pool isn't big enough to cater to the amount of people who will most likely use this
N/a
It's not as big :(will be very limited space and crowded
only 2 concerns is the parking and the impact for the residents nearby. A parking area nearby with in walking distance would be an idea to consider and the size of the pool is too small
As long as there is a 50m too
Still expensive
Congestion from too many people
None
Too small Too crowded Won't capture the real meaning of a community pool
Parking. Not sure the pool is big enough.
Same as 50m pool , noise parking, antisocial behaviour, not managed after hours or restricted entry after hours
Not big enough to maximise the potential for the site
small
Structures should never be built on the beach. Sea levels will rise due to global warming. The pool destroys the natural environment, will cost an untold amount if money to maintain in a futile attempt to work against the forces of nature.
Direction and depth. Lack of space and flexibility.
Just the distance hence me liking the 50m
Cost. Parking & disruption to native wildlife & area.
My only concern is that neither the 50m or 25m pool will proceed due to NIMBYism
50 m would be better used- could be divided into two 25m or kept as 50 m
It's too small
No real concerns. Best option.
Nil, this area has been quite disturbed since first settlement, so embankment protection will be a boon. Most Kaurna sites & fresh water Springs are back from beach intertidal zone. Ergo issues should be few.
This size pool may be a false economy, permanently reducing its usability for a 15% increase in initial construction costs.
The size The look The position
Nothing
Too small, no imagination
'-doesnt cater for growth, although cheaper it now it would be more expensive to expand it in the future.
As with option 1 lack of parking which does not adversely affect residents

I am happy with option 1.
The size may be an optical illusion in the illustration provided. It may be better bigger. Hard to say!!
Detrimental effect on sand movement to Hallett Cove Beach
I prefer option 1 as it will give people more space and less likely to be overcrowded.
Litter, car parking,
Too big, damage to natural environment, safety of swimmers due to blue ring octopus
Footprint, carparking, environmental impact.
Unable to have competitions May be unsuitable for training Over crowding due to size
To small will get to crowded to fast
Large, non-natural and imposing structure on our beautiful coastline Parking is already often difficult nearby in summer
The size
As in previous
It completely wrecks the appearance of the beach. No additional parking is provided and will increase congestion.
Only that it's smaller
Not large enough for increasing population.
It won't be big enough to accommodate visitors
1. It's shorter length - Less versatile than option 1 2. Too small for the amount invested compared to option 1 3. Option 1 is aesthetically more appealing
Too small for the investment compared to Option1.
1. Cost is too high compared to Option 1 which is a much better facility and able to cater to many more people.
I'm not concerned
Up-keep
Too small for the area
1) Potentially too small for the amount of people that will likely use it 2) The same car parking issues may apply
The pool is too small leading to possible overcrowding. Once again, as above
Too small
Too small for my laps, I can't tumble turn.
Completely unnecessary
The need for future enlargement as too small. Parking Miss use of area by users
Smaller than option 1, Not big enough, could be bigger.
If this pool is Adelaide's answer to Bondi Beach is there amenities and facilities including cafes nearby to support an increase of people being attracted to the area.
The pool not being long on enough for exercise
All that effort and it will be too crowded

Parking, parking, parking
None
Cost
In summer swimming is long course. All squad swimmers know that. This would be open in summer but be permanently short course. Doesn't make sense from a competitive swimmer stand point. Not enough space for the amount of use it will get. E.g. using inflatables and lap swimming. It won't look as pretty for the photos and advertising.
Not big enough
Not big enough. Overcrowding. Will always be disappointed it wasnt option 1.
May not be not enough
Prefer 50m as 25m too short for full lap swimming for fitness, not enough space prefer 50m, enough regular public transport from train station.
Car parking
Not big enough
Maybe a little small
Not big enough, not enough car park no shade
Small
none
Same as in previous answer
Pool may not be big enough if popular
Too small
Parking
Parking
The pool is too small
Parking
Pool too small
Everything. Hallet Cove is losing its natural environment.
If its going to be done, it should be done right the first time. If it proves to be popular, and an extension is warranted, it should have just been made to bigger dimensions in the first place.
Too small, crowded, too small to organise going with other families.
None.
Only that in hindsight will probly regret not getting a bigger pool
None
Not big enough for general public use
My main concern is that this would be a “half-a-job” people would not use this as its a paddle pool those people will still attained beaches like Brighton etc, if you look in NSW most people who use these seaside pool it is mainly for exercise reasons. Option 2 would merely be a waste of money as people would enjoy for the first couple months and then it would merely become a white elephant with no use as it was never done correctly. AVOID
Could have a 50m pool
Will be too small
Nothing to small
Nothing

1. Cost to build plus ongoing annual maintenance expenses, which will be passed on to me via my council rates bill. 2. Negative environmental impact on the natural costal tidal environment. 3. Increased traffic, parking and noise in the residential streets surrounding the proposed pool.
Will it be too crowded? Will there be lifeguards? Carparking
'- environmental impact - pool may get crowded during summer season - maintenance
None
same as my previous comment
Not enough parking
Too small
Nothing
may as well - do option 1
Best to build a good size pool
Not as good for lap swimmers but not terrible
Not big enough for number of people that may use in summer.
Prefer Option 1. 50m good for lap swimming. Same considerations as listed under option 1.
Not applicable.
Hallett Cove is an important Geological Heritage site and the development of a seaside pool and embankment protection would have significant impact on the Geological site and the environment. The seapool will increase erosion to the embankment to the north similar to the West Beach Marina. It will impact on glacial erratics and the the rocks of the intertidal zone and have potential impacts on Kaurna dreaming story lines.
Parking might be a concern. Might need another toilet.
1) Rate payers money being spent on something that will be used by people who have contributed only via state government taxes 2) Ongoing upkeep expenses at a time when most rate payers are struggling 3) Almost 8 months ago I requested a yellow line be painted opposite my driveway for safety purposes. Despite 3 phone calls to the council in that time, no feedback or action from the council. Why should we spend all this money when council cannot manage the day to day simple issues
Not enough swimming space for potential demand. If there is going to be an investment in a sea pool it should be large enough for all community to use comfortably. Lack of changing/toilet facilities in this one too.
no allocation for extra parking in area, nowhere near enough parking for upgraded facilities that are already in place
Waste of resource to only build a 25 meter pool, especially if it grows in popularity and becomes over crowded
Maintenance
Not big enough
Less space for users, particularly in summer, less protection of embankment.
to small and limits the number of people that it could accoomodate.
No concerns, SA was behind all other states in building sea pools, such a short vision
Parking Traffic Night time problems

poor design
not big enough
None
Parking in area
Its not 50m
Increase in cars parking, people and poor behaviour
Not as good as option 1 for adults but would be a great family space
Small, orientation, comparative price
Same reasons as option 1
Parking.
1. not enough space to swim/too tight 2. won't be able to swim long lengths too much 3. might be a bit awkward with other people if it's close together causing some not wanting to go
Same as option 1
Not enough parking to support additional users and visitors
See my previous concern.
Ongoing cost, Traffic control, Not needed
Pool is a bit small for the likely amount of usage it will get.
Is it big enough
Nil
Overcrowding
'- Limited use - Does not appeal to lap swimmers - N/A
Don't think the size would be big enough for demand. No other points to add
Storm damage. Would like more hard scape recreation areas
May not be big enough
Smaller pool
Lack of changing facilities Parking Small pool
It might get too busy and packed during summer Lap swimmers won't like the shorter length
Same as option 1
Too small, just a wast of money to not do it right.
Prefer 50m pool but a pool is strongly supported.
Car parking Won't be big enough
too small and will be very cramped especially on hot days during holidays
'- To small and will be over crowded quickly - 25m will not attract strong swimmers as much as a 50m pool - shades and shower missing
Parking. Lack of businesses in immediate area.
None
It might not cope with demand from hallett Cove and surrounding suburbs

It will be crowded in the summer months, congested with lap swimmers and casual swimmers, no shade.
Providing enough parking for visitors to the pool etc.
That option 1 didn't happen.
Doesn't provide the lap-swimming option; Cost to build & maintain; Would not be the best long-term option.
does not allow 50m swim lengths
It's not big enough It will get overused It's can't accommodate large numbers
Inadequate space, parking
Too many people Parking getting harder Will it be warm enough (if you not a seal...)
Not big enough if it is popular
Parking
n/a
Environmental impact. Cost. Potential crowding and parking issues.
Pool might be too small to accommodate large groups Cleanliness of water Safety
car parking lack of shade
Too small given the popularity
The 25m pool would be too small. If it was necessary to extend the size of the pool in the future it would certainly be more expensive.
Environmental impact
Do it once, and do it right. Build the 50 metre pool.
As with first option intial cost if build and ongoing maintainence . Possible damage to the pool . Will it be large enough .
Will be to small for use by large community Not long enough for laps Not enough length for comfortable social events
None
No concerns
None
Lap length not long enough Overall capacity too small
Too small
waste of coucil payers money
1. less clean between tides 2. over crowding on busy days
Im concerned the pool wont be big enough for the amount of people in the area
Noise, parking, antisocial behaviour
See comments option 1
Pool may be too small

Too small
A but small
Same as option 1
Might not be large enough for the visitors
Would like walk in access from one end for disability access please
Car parking
Not being big enough for everyone to enjoy.
Car parking Pool safety Attracting degenerates less room for the occupants during the warmer weather
Nil
Not big enough
Will not satisfy competition swimers
See answers to 11 above
Too small
None
Parking
The high cost for all the ratepayers Inc ongoing maintenance costs just for the few that may use the pool. It will destroy the natural look of the area, it will take away from the Anzac memorial area.
Smaller sized pool
Too small
1) it seems pointless to have a smaller pool with less functionality and capacity for minimal operational cost uplift vs option 1. 2) less capacity, could be busy in the peak of summer and crowded if smaller version is chosen.
It's not 50m. Go big or go home, right?
Not as big as option 1
Too small
None
That it is not large enough
Pool too smal
Same as option 1
None
Traffic parking rubbish
Smaller pool will be more crowded
1. Too small for lap swimming and leisure swimming at same time therefore 50m is better
Too small
Nothing
Same as for 50m answers
Adequate car parking
The size
Nil
Not big enough. If we are going to build this, lets make it big enough for everyone to use..

Not enough space for many to enjoy at once. No fence is a hazard. Not as good a size as the 50m
See previous comments.
Orientation of short pool; Beach ramp access east west not north south; does not take up full 90m embankment
Car parking facilities
Shorter pool less swimming options
Nome
Is it too small for all of the effort that will be needed to build it, will it be big enough for multiple people to use and it does not utilise the space as well.
Same as mentioned in Option 1
Too small, not enough parking
Too much money for an outdoor sea pool. We have an outdoor pool at Marion. Shuts down for 6months as not profitable. Think this is a huge amount of money for something only a few will use.
Too small
Same as with the potential bumpy or slimy elements of the natural rocks in children's pool for safety reasons.
Parking options
More crowded
25m is far too small. Will become like a wading pool.
Destroying the beach
Same as option 1
Not big enough for the amount of users. Overcrowding would be dangerous and hard to supervise.
Nothing
As above
Not quite big enough when large groups of people are there on weekends
NONE
Too small.
Same as comment for 50m option 1
Not large enough for laps
Too small Toilet facilities Parking in the area
'- not big enough, I think it will be more popular than anticipated so will need to be bigger.
If I just want to chill I might get in the way of people doing laps.
The length of the pool would not allow for the organisation of events If a pool were to be constructed, I would support spending more on the 50m option Ease of travel to the pool (not many public transport options on weekends, possible lack of car parking)
Doesn’t provide for future growth that a 50m pool does
No concerns, I just think the 50m pool is a better option fitness-wise and better deal financially.
One
Too small and over crowded
Less capacity for growth
As per option 1, but I imagine the oversll cost is less
Only need one. Ridiculous idea

Potential impact to beach ecosystem.
Damage to the coastline environment
Size
Parking and access
Parking
It seems like a compromise option 1 is much better
It is not 50m.
Not big enough for the number of people in the community who would like to access it
too small
I only want the 50m
Cost Traffic and social impact Environmental change not in keeping with coastline
High impact on existing area with man made structures; Parking issues with more people using the beach area as a result of the pool; Costs - Initial and ongoing
Not very big
Minimal cost savings. Less usability of swimming lanes.
Suitable parking
Ongoing maintenance
Lack of space Foresite for community growth
Too small, no room for growth, looks out of place for the beach size.
Length of the sea side pool
Considering the costs I believe having only 25m is a waste of money. We need more 50m facilities in South Australia. Building only a 25m will be a missed opportunity.
None extra
See previous
overcrowding, some people may have to wait to use the pool while some may not want to share
The small size
To small
Not enough room in summer when lots of families would come down, the 50 m option is better. Outside of that nothing
Too small for high demand
Reduced size. Cost saving yes but this will be popular and can't be made larger later.
Size and cost in comparison to option 1. We are better off having option 1 or no pool due to cost/return ratio and what it delivers.
Not large enough
I feel with the popularity of Hallett Cove and the inevitable crowds that this pool will draw, option 2 is too small and will result in over crowding.
Do not do half a job.
too small
Too small for Lap swimming. No provision for young children. A bit of a half effort.
why spend money and not get a bigger pool
May be too small

This is part of the conservation park
Enough parking for visitors
Parking will be most People's main issues.
None! Pleaaaasserre build the pool!
Parking availability. Need for more toilet facilities. Increase in traffic.
Nothing
to small, will be outgrown too quickly not value for $$$
Too small
man made structure changes the nature of the beach area
while 25m pool is good, it is not as good as a 50m pool
Parking
SAME AS OPTION 1
It's too Small.
Nothing
Nothing would concern me.
Same as previous. It looks ugly. It looks like a airport runway that has been built right in the middle of the beach. It's a horrible design. It should be more integrated into the surroundings and look more natural. It a waste of money. It will have ongoing maintenance costs.
It will cause damage to the natural landscape and is not environmentally friendly.
Too small for events which may be beneficial for revenue.
I think the embankment protection is vital Supports environmentalism
Half hearted waste of time job so if your going to do it do it properly or don't bother ...your making and leaving a footprint either way ...it won't be beneficial to a larger variety of people
Too short for swimmers.
Too small Parking Lack of other amenities
The pool is unnecessary. We don't have the population or user base to justify the expense.
Pool too short.
Less economical than larger pool
Pool will be too small for local community, swimmers and children...
Probably too small
Too small, too busy for residents to use, parking in streets
The pool is too small
Pool too small
Car parking
Nothing
Nil
Close to same cost as 50m, parking, environment
Nil

Impact on hooded Plovers
Too small
Impacts on the beach Impacts on sea life Parking
cost
N/a
Nothing
Too small
as above
The pool is too short
Same as for Option 1
We need this pool..
Too small, over crowding I don't like the location
Not much space for everyone who will be swimming
Parking accessibility Safety
Parking, over use, water safety
1. Too small for competitive training and events. 2. Won't accommodate as many people as a 50m pool would.
Pool too small
Pool too small,
Size is too small and not worth all the effort for something of that size.
doesn't cater for large number of users
pool will wash away
Size of the pool
A smaller pool kind of defeats the purpose of having a swim pool. People will want to swim more in a longer pool.
Bit small
None really except it is too small for a large population.
None
Small aize
25m Pool is not big enough.
Too small. No one in australia builds 25m out door pools, does not make sense
It's too small Aesthetically, being small in such an expansive area makes it look silly
Too small
Pool size
Environmental??? I guess I have to leave this to the 'experts'
Parking
Parking
Too small Not useable for competitions Storm water diversion costs
Lack of parking
lack of parking, the cost of upkeep and presumably the entry fee

I do not believe the pool will have an ROI impact on environment Current design will be below high tide line and unusable for majority of the day depending on tide cycle.
Probably the same as my 50m answers
That it will cost too much money. I doubt many people will use it year round. It is not worth the huge cost.
Again, parking in the area, there simply arent enough as it is set up presently.
Spend more money and go 50m pool
Orientation of pool
Damage to beach while building Damage to beach after expiry date during demolition Cost of project and ongoing costs, plus increase in council rates. Maintenance of the coastal track is not happening, the fence has been cut and is extremely dangerous, will the pool be maintained?
Too crowded Lap swimming is difficult Not as suitable for Vac Swim
Not quite big enough.
length of main pool. looks like an add on. does not follow the contour of beach.
It is much easier to swim laps in a 50 m pool compared to the 25 m when sharing lanes with other swimmers.
Nil
As in option 1
increase traffic volume. damage to environment during build and after by increased public use. impact on already high rates.
Parking and Infrastructure. Safety. Antisocial behaviour of users.
May be too small. Future costs would possibly be more than initial build of larger pool and embankment protection. Our population in this are is continually growing so need to provide larger space for future generations.
Same as option 1. mostly the cost especially if I end up paying via rates.
Same as option 1
The same concerns as option 1
Pool may not be big enough for amount of users
As previous answers in option 1
Nol
Only the cost.
We should leave the beach natural and beautiful We don't need it There are so many other places to swim
Parking ... and more flow on design than a square
Either Option 1 or 2, my concern are they are built with proper reinforcements so it won't crack/erodes overtimes etc....
Too small

As per option 1.
Not big enough for everyone that will come to the pool. NSW have lots of those big pools. Every State should have at least 2 of them north and south.
Too small, kinda not even worth having a pool that small
Parking (same for Option 1). Limited parking already exists at Hallett Cove - particularly at the southern end. Potential for crowding given the smaller size and likely popularity. What would be the maintenance schedule - how regular, what is done, how specific storm incidents are handled etc?
Kind of seems a waste of effort to go to all the trouble and then only do a 25m pool. It is a long beach, so why not use it.
Does no provide the capacity needed to meet community demand.
It would ruin the ambience of what is currently a natural environment unsoiled by man-made structures. It would remove the intertidal marine creatures and shorebirds that currently live there and the extra activity would stop the endangered hooded plover from continuing to nest in the area (last season they were nesting there). It would look ugly from the world famous Hallett Cove Conservation Park.
1 Parking for locals and their visitors. 2.Cost to local residents 3. Cost to Marion Council as Labor State Funding would be nonexistant
I think if we do build a pool, might as well be 50m long, in summer more people can use it. The cost is probably not a lot more for the extra 25m
Too small
The cost is not significantly less than the cost of the 50m pool - which would be much more accommodating for all people to enjoy.
Prefer option 1
nil
the pool size is too small
'- The cost to build the structure is $1m lesser than 50m seaside pool. Not much difference so might as well go for the double size pool - The ongoing operating costs is $20k lesser than 50m seaside pool, not a significant difference. My decision is either option 1 - 50m seaside pool and embankment protection OR option 3- embankment protection only.
I think Hallett Cove beach is unique and any option to build a pool will take that away from the area If we have to have a pool and it is popular this would be to small
50m is best 25m is to short 25m is inadequate
No e
Not as aesthetically pleasing as the 50m. Far less space for lots of families to play/swim in.
they might become very compact and not enough room for people to feel comfortable
1. 25m will not be large enough to swim properly. 2. With many users it will become overcrowded.
Car parking streets should not be the option going to make it's super hard for residents in summer
Parking availability

Lack of adequate parking.
1. 25m lap length less preferred by swimmers 2 . Smaller pool will only protect half of the 90m of the embankment stabilisation 3.
None
Loosing the look of the natural environment
Too small
Not large enough for the community
Too small
if spending this significant amount of money - may as well spend a bit more and do it right and optimise the facility - i.e just do Option 1
May get crowded Less access for adult swimming compared to option1
Not big enough.
Environmental impact, Making a busy place busier and impossible to park at to access the conservation park, noise and rubbish
Carparking
It being too crowded in warmer months
Environmental impacts
I only have one concern and that is that this pool will not be big enough.
It would be better to be bigger but no other concerns.
smaller pool does not represent value for money
Environmental, cost, parking
Mustn't harm the environment
My only concern is that this option is too small for possible a large number of users
Too small.
same
25 m is not big enough pool for the area. As the only ocean pool in Adelaide it is going to attract a lot of interest from locals and nearby areas.
Not enough parking now. It will be a disaster if the pool is built. Access to cafe now is difficult unless you get a park on the lower level.
Nothing
costing is so similar to 50m
The environmental and ecological impact, the usefulness of such a proposal and the financial cost.
Pool too small
I love this concept so no comment here
Too small
Too small for the amount of funding.
No concerns.
Nil
more competition for space
1. Not sure if it will increase the amount of people and traffic coming into our quiet, peaceful, beautiful neighbourhood. The isolation is part of Hallett Coves charm. 2. Not enough parking facilities are available. 3. This could have an effect on the safety of our community & children who live in the area.
I think this option will be a bit small for the purpose of the project.

Pool size, will likely get very busy
overcrowding. i think this will be a popular attraction.
I don't support a seaside pool
Too small to be adequately used/ shared by local public and visitors especially during peak Parking Change and toilet facilities for families
Too small
Lack of car parking
Same as 50m pool
Too small, Environmental impact
Too small, if you are going to go to the effort it would be good to do properly and provide a big enough pool for community use.
No concerns
maintenance and upkeep
Cost
The size is too small for a growing population and increasing popularity.
Parking
it might be too small, and only used by kids
might be too small and crowded
Too small
not big enough maintenance too small
Needs to look natural
Doubt it will be big enough for demand - either go with the 50m option or embankment only.
Environmental issues Ecological issues Some highly educated environmental scientists are against this project - it would be beneficial to listen to the scientists.
Small pool
It's too small, the pool should be 50m to really reap the rewards, taking into consideration the estimated cost is $1m extra
Not big enough. Not ambitious enough.
Too small. Don't half do it, spend the money and make it a decent size that can be used properly
too small
Not large enough, may feel to small. Not enough shade area or change room space. Parking
Poor concept - less practical for lap swimming and doesn't fit in with the lines of th beach Spoils views at Hallett Cove Beach Constant use of pump for circulation of water - not ecologically sensible
As per comment for option 1
will more marking be made available and fencing or lifesavers on duty during peak periods.
Not big enough Over crowding People won't use if busy
Short term distribution to area

Less people able to use
Too small Too busy Crowded
see above
Pool would be too small for the community
Size usability
N/A
Stupid idea. Irresponsible human activity.
Nothing
Cost, parking & general disruption while building
No concerns
Car park in the area
Cost to maintain Will it be big enough for demand
None Nothing Zilch
Not much
1 Costs almost as much as a bigger pool 2 Too far out and looks just dumped on the beach
1. reduced room for various ages and swimming experience
will cause further damage to the coast, Parking will be an issue, rubbish will be an issue, will there be lifeguards, where will the pumps go?
High cost - with Option 1 costing not that much more.
nothing
Increase erosion, destroy beach and impact glacial drop stones
Not parallel to the coastline - not as good a fit as Option 1
Present parking inadequate now with often 6+bus loads of students,, plus visitors to the Conservation park. Ecoli level at field river highest on coast. Depth of Permian sediment not fully tested, and Antartic drop stones will be further disturbed.
Pool size Placement
Not enough room for lap swimmers and an area for children and teenagers to play and relax in an end lane. Worked as a lifeguard at several pools in SA this is always an issue in 25m pools. As a swimmer 50m is also standard for comp swimming and I think more competitive swimmers and masters ocean swimming clubs will be interested in using this
Possibly too small go for the 50m option!
Too small so would be too crowdered for users for families etc
Yearly cost
The amount of car parking required - I know how much demand there is for existing parking space. How well it will be maintained, particularly after storm events. Any advantages gained by being smaller do not seem proportional to cost saving over 50m design.
Not big enough if lots of swimmers are keen to use it
Same as no 1 responses

Just a waster of money. A 50 meter pool will lift aquatic sport in south australia a 25 meter pool is a waste. South Australia already has a million 25m pools
Impact on fragile environment
As above
Same as previous
Bit small Expensive maintenance cost for size compared to the 50m pool that is twice the size
25 m may not be big enough, maintenance
Further to above response, I am concerned it will not suffice our growing population as a long term community project
Parking
Too small Less room when popular
None
crowded noise parking
Limited capacity and with the money spent - a waste of time and money for a lesser option.
Smaller size
Way too small. Parking issues same as Option 1.
1. Pool size to small 2. Overcrowding 3. Waste of tax payers money. (Cost difference between 25m pool and 50m pool is very small).
Cost similar to 50m lap pool
As per answer to 50m pool
Not big enough for the demand
The size might not accommodate for how popular it could be
Might get crowded Lifeguard numbers
Value for money not there Parking Access
SAME AS OPTION ONE (1), MILLIONS WASTED.
The size is insufficient for future growth and current number of likely pool users, ie it will be too small to meet current demand when completed.
My main reservation is the size of the pool. It is too small
Pool is too small
Nothing just ensure the same add ons are part of the plan as I stated in option 1.
Need for amenity buildings, parking, child safety
Not long enough for fitness swimming. Not suitable to attract swimming events to the area. May become overcrowded compared to 50 m pool.
Being smaller accomodating less families.
Misuse of funds. Might as well build a big pool so everyone will enjoy it
Environmental Impact: The construction of a 50m seaside pool and embankment protection may have potential environmental impacts on the coastal ecosystem, including disruption to marine life, alteration of coastal sediment dynamics, and changes to natural beach processes.

Cost and Maintenance: Building and maintaining a seaside pool and embankment protection can be costly, with ongoing expenses for cleaning, maintenance, and repairs. Ensuring sufficient funding and resources for long-term management could be a concern. Public amenities and safety: The seaside pool and embankment protection may attract a large number of visitors, raising concerns about potential safety risks, such as water-related accidents or overcrowding. Adequate safety measures and supervision may be necessary to address these concerns and ensure public well-being. Furthermore, there are current inadequate amenities such as parking, public toilets and and lifeguard service at that location.
Control bad behaviour
The size is limited.
not big enough :)
Nil
Nil
Same as before - the car parking issue
Not enough effort to discuss nature conservation funding for ongoing protection of fauna, flora, or the encouragement of humans reducing their footprint
insufficent parking - narrowed streets due to increased parking on surrounding streets, the impact on native birds, marine life and overall beach appearance, lack of surrounding businesses and toilets, increased rubbish due to popularity
The physical and visual impact of the project. The ongoing costs associated. The potential for the pool to be underutilised.
As per option 1
see previous comments
Rather small considering it would be very popular, lack of carparking, street congestion
Same as option 1 but also overcrowding
Too short for lap swimming. Parking could still be a problem. Could be damaged by storms
As per option 1 - long shore drift, wrecking coastline and stormwater outlet that millions were spent on, the running cost and the cost
Same as previous
A bit small, a bit like building a one way expressway.
Lack of confidence of long-term costs and maintenance associated with the project. Destruction of the natural small rock formations that house the cute crabs to make room for the pool. Our houshold believes the project would be a waste of government/funding partner(s)' money and would be an eyesore to the natural view that currently exists.
That it’s too small
'- Initial Cost - Annual upkeep at $1M per 5 years - High Cost provision per persons making use of facility
Parking may be an issue but not a deal breaker. Would be plenty of side streets with in walkable distance.
The sea bed at the proposed site consists of glacial clays of an unknown depth, and not solid rock, which is a necessary foundation for other existing seaside pools. Polluted water from the Field River and storm-water outlets causes algal growth on the rocks, and this will make it impossible to maintain pool water healthy enough for swimming, as it spills into the pool at high tide, or in storms.

Hallett Cove's population is, and always will be, inadequate to sustain viable usage of any proposed pool, when there are other good beaches and pools nearby.
My concerns are many and varied, including: 1. Construction and ongoing maintenance costs - already extremely high and likely to blow out considerably in the current economic context. I do not support my rates being spent on construction or ongoing maintenance of a seaside pool at Hallett Cove Beach. I am also concerned that this structure would attract vandals. As a regular user of Capella Reserve, I have been disgusted by the vandalism of the toilets installed there (necessitating their indefinite closure) and the astronomical repair costs this would have resulted in. I fear that a seaside pool would attract the same kind of antisocial behaviour and damage to Hallett Cove Beach that we have seen at the Capella Reserve toilets. 2. Lack of supporting infrastructure for the additional people a pool would attract to the area, noting the beach is already overcrowded with visitors at peak times. Inadequate supporting infrastructure includes additional car parking and lack of additional toilets to cater for pool users (meaning people are more likely to urinate in the pool and around the beach, creating hygiene issues). The single toilet in the area is completely inadequate for the additional people a pool will attract to the area, particularly in the context of water activities. 3. Proximity to the War Memorial, which I consider to be disrespectful. Hallett Cove Beach is renowned for its geographical similarity to Gallipoli (which I can attest to, having visited Gallipoli). Construction of a pool in front of this place of remembrance is crude and disrespectful, in my opinion. 4. Proximity to the Tjilbruke Dreaming Track and marker - as above. I view the construction of a pool at this site as disrespectful to the local Kaurna people and their cultural attachment to this area, notwithstanding that consultation with First Nations People is intended should the project progress. 5. Risks to local hooded plover population - as a daily user of the beach, I regularly see hooded plovers on Hallett Cove Beach during breeding season. The construction process threatens this endangered species' breeding patterns, as does attracting even more visitors to the area. 6. Conservation ethos - the construction of concrete seaside pools strikes me as being contradictory to the conservation ethos of the area. It also represents a visual blight to the natural beauty and amenity of the area, which is what draws people to this location. 7. Lack of requirement for a pool - our excellent Council already provides adequate swimming facilities and there are plenty of Adelaide beaches nearby that are suitable for swimming. I suggest there is no requirement to build a pool at this location - we do not need to be able to swim at every beach in metropolitan Adelaide. Indeed, artificially over-riding the natural character of the area to create the opportunity to swim seems to go against the conservation ethos of the area (as per point 6) and the City of Marion's commitment to the environment and sustainability. I am also concerned at the unintended consequences that a man-made construction at this location will create - other areas of Adelaide can attest to the unintended consequences of human intervention at beaches (in the form of the ongoing losing battle against sand degradation and erosion). This project risks creating unexpected and unintended environmental impacts to this pristine conservation area. 8. Increased rubbish and pollution - the area is already heavily polluted with rubbish. As a daily user of the beach, I pick up large amounts of litter every day. I suggest this will only worsen if a pool is constructed and even greater amounts of visitors are attracted to the area. 9. Lack of local support - during a tour of Glenthorne National Park with the Leader of the Opposition, he noted that feedback in support of a seaside pool predominantly came from people living outside of Hallett Cove, not local residents. I agree with this assessment. Virtually all the Hallett Cove residents I speak with do not support this project. It strikes me that this concept is intended to benefit people outside the area. In doing so, it will negatively impact the quality of life for local people, be detrimental to the liveability of the local area, and ruins one of the places in my suburb that I love most (and what attracted me to live here in the first place). I am a firm supporter of the City of Marion and the exemplary services it provides. While I understand that it is appropriate for Council to consider a wide variety of projects for our city, and that this is what is being undertaken here, I would

be bitterly disappointed in Council if it were to support a seaside pool being constructed at Hallett Cove Beach.
The same like previously: 1.Cost - this project it's way too expensive $9M!!! with annual maintenance costs of $180K. My question is who is going to pay for this? I bet in the end, the bill will be pass on to the Marion ratepayers by increasing council fees etc. do we need this? absolutely NOT! I'm sure we can find a better use of taxpayers money especially in the current economy when majority of people are struggling with day to day high costs of living. 2. Noise, pollution, crime. I'm against having any pool in my area as this will come with increasing traffic, pollution, noise and crime. This will have negative impact on quality of life for the people from surrounding streets. 3. Huge negative impact on environment
As previously mentioned for the 50m pool, Wildlife, Ongoing Costs, Traffic & Parking
How many months of the year will the pool be heated - if any? Lack of car parks - suggest part of the green reserve off Heron Way - currently under utilized. Will entry fees cover maintenance?
Large structure constructed on beach of beautiful natural values. Disruption to natural processes/environment
Parking
Would prefer option 1
As per response to option1
Too small and would be overcrowded in summer, do it once do it right.
size, cost of running
A 25m seaside pool won't be large enough to cater for increased number of visitors. Storm water outlet won't be directly diverted. Not having a large rest area around the pool.
Too many people coming to the area (not enough facilities and car parking), safety of the pool for people, ruining the natural coastal landscape
Still a waste of money, just a few million less than the other option.
Too small. Not cost effective. 25 m pool size will not support the numbers. Not appealing.
Will be too small n busy days.
Insufficient additional car parking
On the flip side, not big enough to accommodate for the crowds. Footprint. Car parking.
Too small
Not long enough Less storm water quality response Less competition options
Environmental impact Unknown operational costs Lack of parking and disruption to local community
Not as great as a bigger pool
We are concerned about the risk to the stability of the beach if the bedrock is broken to accommodate the excavation. There is no provision for car parking for this project. On fine days, even in winter, the existing car parking is fully taken up. The estimated cost is out of proportion to any benefit, and the money could be better spent on more important projects.

1. I think it wouldn't be as used as much as a 50m pool. 2. If you're going to build something do it properly. 3. Initially with the extra attention parking issues. But I feel these would soon settle down. Same as option 1.
It destroys the natural coastline.
Environmental impact on the conservation park and access to the car parks and the beach
Parking and size. I think it will be popular so needs to be larger
Costs and ongoing cost, not needed
Disturbing the stable beach platform leading to increased turbulence and beach erosion. Destruction of world heritage geology. Destroying unique naturalness of beach.
The high cost, which is not justified by the limited number of potential users. The impact on the environment. The ongoing maintenance cost, which will need to be met by rate payers.
Environmental impact, ruining beauty of cove, lack of parking
1. It is too small and doesn't cater for a diverse range of potential pool users. 2. The cost is only $1.3 M less than the bigger option but getting a lot less value. 3. The environmental footprint of option 1 is no worse than option 2 so there is no real reason why environmental impact should be a consideration.
Nothing
If you care going to spend so much on a pool go for the best option (ie 1)
Same as previous answer to Option 1
Parking
Same as option one. Less space as it will be a popular spot during summer. The 50m pool is more ideal for the location
Rather expensive compared to option 3
Na
Same as previously
Same concerns as option 1.
As for option 1
25m lap length less preferred by swimmers for fitness
As per Option 1, I don't believe a seaside pool is necessary or required. The cost is significant to firstly build and then maintain for something that will only be used for around 3 x months of the year. The parking review has indicated mostly existing parks in the local residential area, and I don't think this would impress residents of the area, and they are also up steep hills. There is no scope to add any more parking other than the few that were in the report. Visitors by train would also need to walk up and down steep hills to visit. The visual aspect is also not appealing to the area which is renowned for its natural environment and geological significance. This would ruin the current natural landscape which is what attracts people to the area. Whilst alot of people are all for a new pool I believe the novelty will wear off after a while. In addition there a surfers that use the point during stormy weather with the wave ending right where the pool is proposed.
25m feels a bit like an amateur pool / half done.
Same as before
The available parking is limited and a short distance away. I guess this might deter people from visiting but I think residents might get a bit hacked off.
Nothing

1. ZONING GUIDELINES AND PRESERVATION OF THE COASTAL AREA The City of Marion Development Guidelines and Zoning Objectives state that it: “Seeks that any development should be designed and sited to be compatible with conservation enhancement of the Coastal environment and scenic beauty of the Zone and should not adversely impact on the ability to maintain the Coastal frontage in a stable and natural condition”. The proposed large conventional concrete seaside pools over 2,000sq/m armored on the Cove beach with ancillary works such as toilets, change rooms, lighting and access paths is not in keeping with the guidelines and zoning objectives of the City of Marion. In the past, Marion Council has made every effort to promote the conservation of this geological and unique cove to the entire state inviting students and visitors to this unique coastline. The pool protrudes at a size and scale from the embankment into the important geological foreshore that is not sited to enhance the scenic beauty of the zone. 2. COST AND ONGOING MAINTENANCE The feasibility study outlines that in addition to the significant up front capital costs of a conventional concrete seaside pool on the beach, there are also significant ongoing operational and maintenance costs to the City of Marion for many years ahead. This will create an unreasonable burden on ratepayers of the City of Marion for pools used predominately in the summer months. 3. ONGOING PARKING AND SAFETY ISSUES The survey projects a significant increase in annual visitation to the seaside pools during the summer months at Hallett Cove. This will further exacerbate parking problems that already exist in the small cove area servicing the popular Boat Shed Café and children’s playground. The increased visitations in summer to the large pools proposed will create further parking issues for local residents. The Hallett Cove foreshore has historically had issues relating to anti-social behavior, particularly during the summer evenings. This has been a long term and ongoing issue for local residents and increased visitation to unsupervised pools will likely add to increasing risks of anti-social behavior and negatively impacting the amenity and safety of local residents.
To small
Not as good as option 1.
Littler / pollution from users. Parking. Maintenance costs. Decline in look over time.
Less embankment protection
As above for option 1
As per option 1

no 50m pool Childrens wading pool Childrens wading pool
Needs to be large pool too small.
90 degree angle to the beach Smaller size Only 2 concerns - I think it's a great option - i appreciate the slightly smaller cost, we will use the pool no matter what the size.
Parking
As in option 1
Spending ahuge amount of money and it wont be big enough to cater for everyones needs - if full of little kids, adults will utterly turn away.
Environmental impacts Cost to build ($9 M ex GST) I dont wnat to pay more rates) Maintenance costs
same as q 10
Sewage from toilets Trench into sea for water intake Parking spaces
Rubbish left by users
too small
Price isnt that much less than larger pool parking wont be big enough for all users
Not big enough building the bigger 50m isn't much more
See previous response to option 1
Bad design Destroying natural environment Makes area less pleasant Ugly concrete in area of natural beauty Ruins area of international geological significance Detracts from the tourist appeal of Hallett Cove beach
See previous page
Asper option 1 Damage to pool during storms
Cost! Help people with emergency accommodation so they don't sleep in cars/tents near the Hallett Cove train station
A geographic significant area would be changed in a way that is not necessary This beach is used continually as a walking beach for the above reason and natural beauty. This option will spoil that Could bring some more traffic to the area – when there are pools nearby and swimming beaches north and south of Hallett Cove. The cost could be better spent

What 3 things do you most like about Option 3 — Embankment protection only (no pool)?

Less visual impact on coast Lower maintenance cost Less Environmental impact
potentially assist in mitigation of errosion
Nothing
Might as well put in a pool. There is no pool in this community
No value adding to the beach amenity
NA
nothing
i dont like it
Does not cost as much as the pool.
It protects the very unique environment/amenity of the Hallett Cove coastal area, it is a cost effective option and we wont have issues with parking.
All stays natural on the beach
Nothing about this option
nothing
if it's what we need to do to protect the natural environment then we should do it
Embankment protections
I do NOT support any type of swimming pool being built at HCB
Make use of being in the area
It keeps our beautiful, if unusable beach in its natural state. Ruggedness and natural history is what Hallett Cove was and still is renowned for and I see no need to change that.
Parking won't be affected by increased traffic.
Erosion is managed
None
Sensible to protect the existing banking
most beneficial to all, even those who will not use the pool.
No support
Nothing.
This beach NEEDS a pool. Anyone that disagrees is a selfish toff. We can't all afford to live on the beachfront!
Not applicable. I strongly do not support this option.
Embankment protection
None
If we have to do the embankment why not do a pool
We need a pool 😊
Nothing
We want a pool
None
none as this will cause more erosion
Not adding anything to the beach just reinforcing what is there - it would be such a shame not to build one

Pool will be great for economy of surrounding suburns
1. Provides coastal protection That's all!
Protection of the embankment is a good idea.
Protect what is necessary on this beautiful beach. There isn't enough parking to draw more crowds anyway, and it should be celebrated as the rocky wonder that it already is. No pool is necessary.
Nothing
Protection against erosion
Nothing
The complete lack of pools
Embankment will protect the area, but the inclusion of the seaside pool would be beneficial for locals.
Don't like the idea a pool should be added
Nil
The protection of the embankment
None
No pool.. be progressive. The pools on the eastern seaboard are the best..
I would only support embankment protection if it had a strong focus on native vegetation. The pools may be ugly but are at least community-minded. Hard structures like walls reduce the visual appeal of the area.
Nil
Environmental protection.
Embankment protection is necessary but I do love the idea of Adelaide's first ocean pool
If I have to get behind something it's this. Hopefully it doesn't draw the instagram influencers out in the same way the pool would.
Construction and ongoing maintenance costs should be lower
Nil
Not sure
Sounds like this will actually preserve the environment if it's done correctly & can allow the natural sand dunes to build up & not block this natural coastal process
Environmental protection
N/A
Oh finally, conservation, embankment works, facilitation of adaptive reuse of a state heritage and conservation area. Strongly support
A pool would be great for the area and state
None
Regardless of a pool the embankment needs protection
Unsure
Necessary to protect from erosion, less disruptive, maintains the location as is which is what many people including tourists come to see. Surely natural and significant locations can be left as is and not continually turned into areas for the use of a few.
I like how the environment is less effected.
Not much.
Really the only thing I 'like' is that the embankment is being protected and the area is being developed
Protection
Nothing

I can't see the vision
I don't like this idea as I believe we need something down here.
None
Good to see coastal erosion being tackled.
Good for protection
Great community asset
Nice to have update which will come with the pools and provide more reason to go ahead
Useless beach stays useless
Embankment protection only
Not sure why this is even an option.
Nothing
Likely improves bank protection
No pool.
Embankment protection is still a good idea.
Nothing
Potentially supporting the environment from erosion damage.
The whole purpose of this was to have a pool...so this is a cop out
Protects environment Keeps natural look
I don't support option 3 at all as I would like a pool
What's the point
I support the protection of the embankment regardless of a pool or not.
None
Saving the environment
Probably better for the natural state of the beach.
Embankment protection is good
Protects from erosion
Needs a pool
Keeps beach as is Minimal visitors Least amount of impact on environment
I suppose there is merit in conserving the embankment but that's not what this proposal is about. Perhaps it gets us one step closer to an actual pool.
Retains natural beauty of the cove
No change to parking conditions or nature or noise.
Nothing specific
Not bringing in more people
Preserves the beach Protects the coastline Less intrusive
Embankment protection
I prefer to have a pool in the area.
We should be engaged in trying to preserve or help build back any natural features such as dunes through the use of vegetation and make sure water quality is also a priority. I don't agree with

cement sea walls of any kind as no place in the world has shown that they work successfully in the long term (20+ years) and end up creating a wall with absolutely no beach as further erosion occurs.
For starters, it doesn't involve installing a pool that looks like utter shit for no reason.
Nil
Maintain the natural beauty of the area.
I believe we need a pool
Lack of a pool that I don't trust city of Marion to be able to maintain
No environment habitat impact
Preserve coast No adverse impact to local residents No issues with parking when visiting existing infrastructure ie playground
I love that this protects the coastline.
Should be done anyway
Unclear how it would be different to existing embankment protection. Assuming this option is only here as an alternative.
NA
Protects the embankment to enable continued use
No point
None
All the government money is spent on facilities in the north of Adelaide it's about time money was spent in the south
Coastal protection is extremely important
1) low maintenance 2) No bright light 3) environment protection like Mr Sandisons vision.
Is this protection required Is this a good use of community money
It leaves Hallett Cove Beach alone. No human made structures that would look out of place for the area and less traffic.
None accept embankment protection only
Nothing
Refer to previous comments.
I don't want the pool, the traffic or the ecological affects. Leave it be.
Nothing
Environment protection.
I don't like this option
Not much, but it would provide extended, recreational use of the area.
Nothings
Nothing. Does not add anything to current situation.
I do not support this option
Environment protection is important.
Reduces erosion, strong embankment for years to come, keeps area updated whilst conserving area.
Cost effective Protecting the coastline Minimal ongoing maintenance
Embankment protection is great

Embankment protection is good
Would like a pool
No pool
It still is providing protection but needs sand. Sand would make the beach there perfect
No
No point doing this if there is no pool
Coastal protection
Minimal impact on natural environment
Nothing
Light environmental impact, protection of bank
Doesn't destroy the wave or natural glacial features
Nothing
Less cost
No pool!
Too small
Hopefully reduce erosion and improve beach access
Keep the natural view and maintain its original costal landscape, also cost less.
Nothing really
The embankment protection… that's it!
Why only build the protection and make the beach look far less attractive when you could add a pool and make it more attractive?
It keeps a strong community, we have plenty of tourists that visit Hallett cove beach for what it is, the coast walk is beautiful and I believe that should be the priority. An ocean pool will be the home to countless souls as it'll be accessible at night time and kids can be quite unsafe.
Minimal impact.
It's a protection plan for erosion
The embankment needs protection
NA
No pool and leaving the natural beauty of the beach, the exact way it is
No pool so no real change or moving forward embankment would still be fine under options 1 and 2
At least embankment protection will happen, good for the natural environment, protects any cultural significance of the area
Nothing
Cheap
Protect the embankment Preserve the natural wonder of the park Keep Hallett cove as it is.
Protect the unique beach , more planting of native plants for the birds and wild life ..it is a beautiful cove , please do not commercialise it or destroy its natural beauty ..Instead h help it , not everything in life has to be for human consumption and pleasure..let it be a beach for the marine life
Protect the beach from erosion
Will protect our beautiful beach, won't cost as much or require as much additional parking
HC beach is serene and has historical value. We have other beaches for swimming/tourists. There are sensitive ecosystems in the water at this beach and human interference is undesirable.
Let's do something for our state.

none
A pool is a fantastic idea so I don't support no pool!
Reduce human imprint, converse natural environ
Nothing
No pool, this is sad
embankment protection
Better than nothing
Protection of natural embankment
I dont
Nil
Is needed to secure embankment
If nothing else it helps protect the coastline
It preserves the natural look of the area. It is the least expensive and the least intervention.
I agree it's needed and have nothing more to add
Reduced cost. Preserves natural area. Enhances foreshore
1. I support protecting the banks if this work is required.
We have no seaside pool in Adelaide and only one in York peninsula-behind time
Notjing
Glad that there is environmental protection but no added benefits for users or the area.
I like nothing about this option
I always support work that is genuinely needed to preserve the environment.
Why bother
No adverse impact on residents Protection from coastal erosion
We do need to better prepare for more coastal damage that humans have caused. A large pool would help.
Nothing
Encourage natural sand flow onto the beach proper.
The people want the pool. Give the people what they want.
Leave things the way they are, too many times governments have ruined natural environment, which seems to be due to uneducated decision makers. Plenty of other places to swim, or just walk across the rocks, it's not that hard.
Protecting the coastal environment
Coastal protection Better than nothing being done Hallett Cove Beach is badly in need of upgrades, so it would be a start if money not available for a pool.
I support no pool and no other action is required Leave our coastline alone, it is a beautiful area of natural beauty and geological importance.
Nothing in particular, but if it needs doing that's okay
If it willnprotect against coastal erosion then it is worth doing.
Nothing.
I think having a pool is a far better option

None. It's a complete waste of time and money.
Nil
None!!
I think we need to protect the embankment.
Nil
Also is better than nothing but hardly a great initiative for the community It may help beach erosion
We need a pool to make the beach usable
I like the enhancement.
No pool No pool No pool
There is no pool
Protection Improved walkways etc
Our embankment does need protection, all along our beautiful coastline.
Good to protect the embankment. But for all this effort a poll the community can use would be better I think.
None
This consult is mostly about a seaside pool, this option doesn't include a pool so doesn't interest me
None
None
Prefer bigger pool
Plan to address coastal erosion
Nothing.
None
Environmental stabilisation.
Retains the environment
'-
Environment the same
None I want a pool
The erosion protection & easier beach access
Expense for only maintenance purposes, no community gains, disruption to community without tangible benefits.
I want a pool and and want to waste money on just erosion
Everything. Hallet Cove is losing its natural environment.
None
Irrelevant re public input, merely a coastal erosion protection measure?
None because there's no pool
Would really like the 50 m pool option
Nothing- Hallett cove beach is currently a dying & deserted beach. Please do not continue this we should have one of the best beach in metro Adelaide.
Environmentally thoughtful
Nil
No point without pool

No point
1. Lowest cost to build and lowest ongoing maintenance fees. 2. Lowest impact on the natural costal tidal environment. 3. Will provide protection against costal erosion.
Helps stop erosion. Won't increase traffic.
'- least environmental impact - preserving natural shoreline - low maintenance cost
Another waste of money. No use to anyone.
Leaving the beach alone, there are very few places left in suburbia to escape the man made noise. I It doesn't not bother me sections of the beach are somewhat inaccessible, this is what makes sections of this beach a nice little respite from society.
Why get to this stage and do nothing
Not much.
its ok, if no pool
Only if no pool is decided protection of the embankment is necessary
They it protects the environment
Don't like this option. Such a great opportunity to create a seaside pool which will be great for the local community and broader communities including tourists.
Not applicable.
1) It costs a lot less 2) it is environmentally responsible 3) we must make efforts to save our coastline
Embankment protection is better than nothing.
nothing to like about option
We need to protect the coast lines so I support something to be done rather then sitting back and letting it be
Protecting environment
Less resident impact
Option one
Nil
SA needs a sea pool like other states, its such a asset to the state
No pool Doesn't add to.the already existing parking. Keeps the integrity around a special area.
Don’t like it
nothing
Pointless - then I can just continue to go to Glenelg or Brighton and have the same really.
Where is the pool? Why invest in development
None
It protects the beach and park areas.
Defence
It's the least environment impact option
Nothing to like really.
nothing
Nothing but has the least impact on the area and the environment

No pool, will not attract more additional users of this area of the coastline. It gets busy enough as it is
*
Looks better, Natural environment, More cost effective
Same as 2
Protection of the beach No further points to add
Protection
Keeping the beach as natural as possible Not as much need for larking Surf should hopefully be ok
N/a
Only if it needs doing
Building embankment Protecting coastal erosion Protecting our environment
I think having a pool at Hallett Cove would be great. It would be a shame for it to not go ahead.
Sustains the natural environment Keeps local area on the quieter side Car parking remains the same
nothing
I guess it will keep the region and natural area as is
None.
I don't support this
Lesiure walking, picnic atmosphere, help with the prevention of erosion with high tide storms.
Do not like any of them
I support this as an environmental solution. If this option is selected then I'd like to. See a plan to return sand to Hallett Cove Beach.
Providing protection against coastal erosion; cost-effective; no additional benefits/problems but you would still spend money
nil
Nothing
Protects the embankment I guess?
Environmental protection. Less crowding. Cost minimisation.
Less cost Less impact on the environment Less people/traffic
Nil
None
There is not much that I like about the embankment only proposal.
Would help protect the area
If it is required and we cannot have a pool then I would support it.
Access to beach via ramp
none

I dont :(I dont :(I dont :(
Wall retention is needed buy could be so much more then just a wall
No parking problems, no addtional noise or congestion
Don't like this option
No point spending money as no value add to the community
Embankment protection
Won't make the beach any better for small children or swimmmers.
Nothing.
N/A do not support
Want the pool
Protection of the environment
Having a pool will courage people/families to come to Hallett Cove and it will be a safe pool to use adjacent to the sea.
WE NEED A POOL
Erosion protection
It will protect the current natural outlook and won't detract from the Anzac memorial. Best value for the ratepayers in these difficult times when everyone including council should be reining in spending.
Shame to not have the pool
It is good to protect the embankment, but not adding to the area.
pointless to spend money on this without a pool
Good to renew the beach area
Nil likes
Nil
Embankment
preservation of the beach Money betterspent on roads etc
Why bother?
1. Conserves the existing land. 2. Makes the foreshore safer. 3. Provides habitat.
What's the point if no pool?
Any environmental protection is great. If this is the most viable option I would be disappointed that the leisure side of the project wouldn't come to fruition but support the protection of the space.
Nil
Nothing...!
No value
Perseveres the coastline, lawn areas and facilities.
None
Why? Can do both and offer excercise swimming options to this fat population.
None
It still helps the environment, cost effective and keeps a lot of people with environmental concerns happy.

It’s perfect. Has no pool and keeps the park the same
None
Retain the look of the beach Retain the original beach Save money for hospitals
I do not support the no pool option
Nothing
Nothing
No pool, no pool, no pool
Takes away all the other concerns
Need a pool
Again a worthwhile community facility
Won’t affect parking.
Nothing
Nothing Will not bring anything more to the area. Lack of beach there makes it limited in terms of usability
'- not much! If you’re going to build an embankment, you might as well make HC beach usable for swimmers
Cheaper.
Providing protection against coastal erosion while keeping the beach mainly untouched Rehabilitation of the local flora with native options Not as costly as the proposed pool options
Doesn’t resolve the lack of swimming
Erosion protection is important.
None
Better to have embankment proection than nothing if pools are off the table
No resemblance to the original idea. A total cop out.
Embankment protection is a positive. Least costly.
Best outcome for the conservation of this beautiful place
Na
Environmental protection
An absolute waste of time and money. Everyone would be disappointed.
Can not find any.
protects the coast
Cost Low impact on traffic and social life In keeping with coastline
Minimal impact to existing area; will not increase user numbers in the area; much lower cost
Nature play
Environmental protection
Protect our environment please
Absolutely nothing
If embankment is necessary.

It leaves the area as close to its natural state as possible. It's cheaper. Residents do not want visitors parking outside their houses on back streets when visiting the beach/pool and this would require the least amount of parking.
Seems like a half arsed effort that will look terrible. Please dont
very limited option
None, you are doing an embankment support for the pool options, why bother having it stand alone
No support at all
Zero
This is a sad option and would be massively disappointing to the community if after all the hype we went this way.
The coast line is protected. No extra facilities to maintain for council. Less cost.
None None None
Preserve existing area
None
Swimmers would not be protected against wave action to shark attacks
nothing
No pool. Missing the main part!
Embankment protection
Nothing
That for the most part the natural beauty of the coast is protected
I support Option 1, but this is still a good idea
Nothing
there would be no pool
I don't like it
natural look,
I THINK THE POOL WOULD BE A WHITE ELEPHANT
Nothing. It has no Pool. What a Rubbish Option.
Nothing
Don't like anything about option 3.
If it is necessary then it should be built.
'- This seems a more appropriate option as no pool is involved.
Support if pool's aren't going ahead
None
Nothing
None None None
Nothing
None
Only that is will protect bank from erosion
No point to it

Nothing
Nothing
Required regardless
Nothing
None
unimaginative
Conservation
N/a
None
whats the point a waste of money
Nil
1 no pool 2 no pool 3 no pool
Nothing
None
Waste of a beautiful spot
1. It's protecting the coast.
Same as now
Keeps the traditional charm of the area and doesn't try to turn it into something it is not.
we need to preserve reserve and parked area
No way to swim at hallett cove
Nothing really
Not applicable
Its better to have pool
Nothing, it does nothing for me
ABSOLUTELY NONE
Nil
Nothing
Embankment support
Still an important thing to do, but I would prefer a pool
No pool feels like a waste of effort and money
Reduced costs Access Less impact on footprint
Embankment protection is needed is important to protect the existing infrastructure
The pool is just a luxury, a waste of money that will benefit only a small percentage of users.
A pool is a much, much better option for all concerned.
Nothing
wasted money and for what?
Less disturbance to our world famous geological beach There is an ocean here to swim in, just wear reef shoes. Less costly outlay and ongoing costs.
N/A
If the pools are not recommended, embankment protection is important. It seems the pools are a good investment for embankment protection with a great facility for residents.

It provides minimum requirements to prevent erosion but doesn't have pool so not completely supported
Preserve infrastructure already in place.
Improvement of sustainability of shoreline and its support to marine life. No increase in traffic volume. Hopefully not too much impact on rates.
The area could use some maintenance.
Although practical, not alot of well utilised use of space
The rock pools, diverse sea life and general ambience of this uniquely natural beach is preserved, the cost won't require my rates to increase when times are tough enough, and the tranquility of the area won't be ruined by hoards of new visitors
Kids would really love pool to go ahead
It will provide some short term protection for sea level rises for local business and residents. Less footprint than both pool options
No comment
To support and protect what is naturally all ready there It is looking after the natural environment Creates and supports tge beach
Doing nothing not a good option
None as there's no seaside pool as it's a long time coming for Hallett Cove residents or residents near Hallett Cove.
Nothing
Nothing specific, any kind of embankment protection is better than none
No increase in people or traffic.
You need the big pool
Yeah good idea, would love a pool but I'd rather no pool than the 25m metre
No environmental impact. No parking impacts. Enhancement to foreshore access.
nc
Do not like option 3. It adds no community facility. Just a sea wall structure to compact erosion. Has to be done at some stage, makes great sense to add a 50 meter seaside pool at the same time
It does not ruin the ambience of one of the last natural beaches left unspoiled by man-made structures. It does not remove the intertidal marine creatures that live there or disturb the shorebirds such as the endangered hooded plovers that were nesting there last season. It would not be unsightly from the world famous Hallett Cove Conservation Park.
great to protect the embankment, really thats done anyway!
None
Leave coastline as it is. Not enough parking now
Keeps the natural coastline
Prefer option 1
Support if necessary.
nil
Cost of building and maintenance is significantly less. No added traffic congestion to the location
Maintains the look of the area Offers more protections to costal errosion

Tough to answer, biased swimmer so; - ensure adaption to sea level rise. Isometric vs eustatic sea level understanding. Future rock fishing?
None
Better access to beach.
keeps Hallett Cove the same pretty rocky walk
I don't think there should be a pool until carparkinh is looked into
It's cheaper
Preserve natural landscape
1. Project cost 2. Smaller footprint
We need a pool, Hallett Cove beach is beautiful but kind of pointless
The beach is relatively unused considering the population of Hallett Cove. Pebble beaches aren't that family friendly and a pool will change that
Maintain the nature
Put in a pool. Get on with it. The young people desperately need it. So do the rest of the community. Why all the delay.
Nothing
It's needed
If needed, then protection for the embankment is important.
It would provide coastal protection. There would be more planting which is benefical to wild life. It would help coastal erosion.
No pool is a missed opportunity
I do like the idea of embankment support but I would definitely like to see option 1 for the pool at Hallett cove beach WITH the embankment protection.
I prefer the options including the pool. I think having an embankment will be good to protect the coastline. No 3rd thing.
Protection of beach
Protection for the foreshore
Nothing wrong with this except we're not progressing.
None as there is no pool
None
Would be good to help erosion but better with pool
Embankment protection is needed.
We have been wanting for then pool for 40 years!
dont think it required
Nothing
I want a pool so no comment
None.
Nothing
Nil
less cost
1. I do like and support the embankment protection as it is needed. 2. I think the design is well laid out, the plan looks nice, improving the area. 3. The cost including maintenance is far less.
'- Good place for kids to play. - Promotes the Hallett cove foreshore

i assume we need embankment protection but i don't really understand this option
Unsure of costs and benefits.
Embankment/environmental protection Potential lower cost Area would remain moderately popular / quiet
Nothing
Third favourite
Nothing
Nil
Nothing I like
Pool is needed
It provides everything that is necessary and nothing that isn't
Looks nice
nothing
Protection for the environment is good. Stop erosion Natural look
Won't attract undesirable elements.
I think anything that can be done to protect the environment is a good thing.
There is nothing to like about this option.
NA
Nothing. Poor option
Nothing
Keep David speirs' piss pool away from us. Disgraceful idea. The uni of Adelaide also think it's a disgrace and I'm sure you'll be kept informed of their position shortly too.
Unsure
Nothing, need the pool
If deemed necessary. Although it has survived for thousands of years without council meddling.
Nothing
Protects the views, maintains the coastal feel, no safety concerns
I support protection that is required in the least invasive way possible
We need a pool
I guess its protecting the embankment?
We need a pool
No comments
Lowest cost
None Boring Nothing
Fucking useless
1 At least you are doing something
That they are planning on trying at least to look after the beach which is the reason for any of this in the first place.

Happy to support this Option, if it has majority support from community. Great importance of embankment protection - though Options 1 and 2 would also provide for this, in their own ways.
Option 3 is still a good thing but not as good as the other options by a long shot.
Least impact on natural environment
A pool will be great.
A bit early for this action as further erosion is following, But riprap with local stone will soon be needed.
Nothing
Less impact on the landscape. Cheaper initial cost and lower cost to maintain. No impact to parking.
Embankment protection
Conserves the current natural beauty of the coastline Is environmentally sound Requires very little maintenance compared to pool options
No specific measures are necessary for training there a lot of aquatic clubs waiting for the 50m pool to help the develop it would be a major blow to the state
I am assuming that this is necessary to protect further erosion
No proper swimming pool area , no use with our a swimming pool.
No pool is not worth the effort
It better than nothing
If the pools are rejected by the community we still must protect the coastline so this should happen
I want to encourage local families to go outside and engage in their community
The other 2 pool options are better
good for the environment less cost no crowd and noise
No pool no point
Embankment protection regardless of the pool or not is a good thing for our beach.
1. Environmental reasons
Less impact, cost (OPEX, CAPEX), solves the erosion problem
None
Nothing
Cheapest
I CAN REMEMBER WHEN THE SHACKS WERE THERE, RESTORE THE EMBANKMENT TO PREVENT FURTHER EROSION, PLUS THERE IS NOT A YEARLY COSTS OF OVER $200,00.00 OF MY RATES.
Nothing
It will provide some protection against erosion.
Nothing and please do not let greenies stand in the way of progress! Honestly what is the issue here to not go ahead with this plan? No brainer! It will only benefit so many young families that live here like us with our 4yr old son which we would take there all the time in summer. Currently the beautiful beach here cannot be used. This will make it usable.
Improved beach access, protection of embankment, preserves the amenity of the beach
Should be designed to bring quality sand back to Hallett cove beach.

The pool is needed, it will also be useful for teaching children to swim and safe from the dangers of the sea.
I like nothing about this option
Increased Coastal Resilience: The embankment protection associated with the seaside pool helps safeguard the coastline against erosion and storm surges, preserving the natural beauty of the area and protecting nearby properties and infrastructure.
I am not opposed to leaving it as is The Pool would however provide more opportunities and entice more people to the area
Nil
Nil
No point
Nothing
The exercise of constructing the embankment is wasted by not adding in a pool
reinforcement and planting
Coastal erosion is, and will continue to be, a major issue that requires attention. The money saved from not going forward with a pool could be used in ways that are more beneficial to residents. Maintaining the integrity of what is a geologically important area.
Negates issues with options 1 & 2
No impact to the environment Minimal increase the traffic No parking congestion on side streets
Looking after the seafront, slowing erosion, improvement of the area
Good for environment, less human impact on natural environment
May prevent further damage to beach. It could capture some sand for the beach.
Less destruction to coastline, the stormwater outlet won't be affected and the extra people to the area won't change and parking won't be a concern
Needed to protect beach from drift and erosion
We should be looking at maintianing and preserving the natural beauty that Australia has afforded us. Pool is not necessary as it would be better for people to go to the Aquatics Centre or buy their own small backyard pool or go on a small train ride to one of our many beaches we have been gifted for living in Australia. Third point to emphasise the importance of the natural beauty we should be preserving and not giving in to ideas that just sound cool.
There is no option to swim currently, which is not ideal for kids in the area.
Nothing.
There is nothing to like about concreting a natural shore-line.
Nothing Nothing Nothing
This option strikes me as a sensible solution to the risks of erosion facing Hallett Cove Beach. It is consistent with a sustainable approach to environmental management, provides the least visual and structural impact to the foreshore, and appears to be a cost effective solution that I would be happy to support as a City of Marion ratepayer.

I don’t like the idea of having a pool at all but option 3 It’s less invasive compare to the option 1 and 2 and It’s less expensive
Hallett Cove Beach is unique on the Adelaide coastline, The embankment will preserve what we have.
Natural plantings
No damage Preservation of the area Council needs to fix the boardwalk
Nothing the rocks already protect what little sand that is there.
minimal impact on costal environment, less cost
Considerably less project cost. Minimum impact on environment. Maintains natural look of the area.
Minimal interruption to natural landscape, making sure the landscape is protected and stable, not interrupting wildlife in area
Stick to the basics and don't use the environment to justify millions extra, when there are so many more important things to spend money on.
Do not like option, as this is about the Pool not landscaping.
The residents need the pool as a way to stay fit. Im afraid to swim in the open sea
I would like the pool to be built
Lower cost and footprint. Presumably no increase in crowds/ cars etc.
Nil
Embankment protected
Preserves environment Low cost Coastal protection
Eliminates possibility of people littering and peeing in a pool
Preserves the existing fragile beach.
Just basically accept this option fir the sake of the beach.
It keeps the coastal area natural , the beach is iconic for its glaciers and geological marvels a pool destroys this .
If the environmental specialist support this option, I would support it as well
That this proposal protects the geological significance of the area. That it will cost the least and not require the continued upkeep of the other proposals.
Best option if council is going spend
None, its ridiculous
We want a pool Preferably 50m but 25m as a second choice
Nothing
Allowing nature to exist as it is with minimal intervention, beauty of unique cove maintained, preservation of environment
1. Retains the natural heritage of the area 2. Parking issues are not a concern
No as much a benefit to residents
Environment protection Parking issues lessened (but still bad on long weekends and fine weather)
Protects embankment, minimal impact to wildlife and landscape.
Nothing

Unsure
Good for coastline Cost-effective Cheap
Less money More environmental friendly Less parking required
Protecting the embankment.
Don't expect parking/traffic issues
It provides protection against coastal erosion
Discreet look so as not to ruin the view of the natural environment, blends in quite well and additional planting of vegetation will be good also Reduced overall cost including maintenance cost
Needs to be protected
The whole purpose of the project appears to be the addition of a unique seaside pool for the community, also serves as SA's only metropolitan sea pool.
I would like a pool.
Nil
I understand that embankment protection is obviously vital either way and I fully support it.
Nanny state. Just build it
Nothing concerns me but I think building a stepped concrete seawall along with an ocean pool would enhance the objective of protection along the Heron Way Reserve. Creating a sandy beach is not a viable option.
EMBANKMENT PROTECTION The embankment protection proposed will maintain and protect the embankment without adversely impacting the significant geological coastal environment and will maintain its natural condition with armoring compatible with the natural surroundings. The development of a 2,000sq/m concrete seaside pool should not be the driving justification for selecting the type of coastal erosion management for this important ecological area. The embankment proposed with armoring to match the nearby rock formation will maintain the significant geological coastal environment without the need for expensive concrete pools.
The hole point has been getting the pool this has been going on for 5+years
No comment.
Embankment protection is crucial of course, but for those of us with disabilities, the pool is an ideal, even essential option especially when there are 2 or 3 in a household.
Embankment protection Support only as a third option if affordability is an issue to go ahead with option 1 or 2
Cost Less impact on nature Less need for supporting infrastructure and therefore more cost
Cost, budget, constraints, maintenance ongoing
Beautification of the area Disability access to the beach environment Disability access to the beach environment
Waste of an opportunity to have a seapool

Public foreshore access Reduction of coastal erosion! Might allow rock armouring, reinforcement and planting
No pool
Protection of enviroment visual appeal of beautiful natural cove Saving a lot of money in maintanence
I admire Heron Way Beach as it is I want to know more options from environmental experts and local environment groups (not construction engineers)
Stop erosion
Prefer a pool but prefer this to the 50m option
I like 50mt pool
Protects coasline
Do not like anything
Allows for better coastal protection Much less unnecessary costs Maintains natural beach environment
Could be beneficial
Everyone can use it open for all the public
It is a small cove with an area of geographical significance. This option will have less impact visually and environmentally Would still be able to be protected against coastal erosion through less obtrusive ways i.e., planting, pathways etc providing embankment protection Reduced costs – project and maintenance costs

What 3 things concern you most about Option 3 — Embankment protection only (no pool)?

Environmental impact Visual impact
this does not address the request of pool.
Too big a chance to lose at this stage not pressing ahead with a pool design
No pool
No added benefit
No room for fitness swimming
The missing pool
Beach is under used as it is for such a beautiful location
A swimming area at Hallett Cove beach is needed.
A seaside pool would be well utilised and this option does not include a pool
why bother, it doesn't improve anything about Hallet Cove beach really.
nothing has changed we miss a great opportunity for the community
That there will be no pool!
None.
Little usage of hallett cove Beach due to rocky beach
Why bother spending council money when there is no real gain
this is a once in a lifetime opportunity to develop the area and option 1 or 2 need to be strongly considered
to only do this option would be missing out on a great place-making and iconic opportunity
N/a
I do NOT support any type of swimming pool being built at HCB
No improvements
I think a pool is a great idea
Pool is needed
Now the pool concept has gained traction, if it doesn't go ahead it will be brought up in future meetings. If the effort is being made to create an embankment, the pool may as well be built.
Having a pool would be an asset for many years to come for locals and a draw card for people from outside Marion. To not do it would be a real loss.
No concerns
No activity available - wouldnt bring people to the beach
Not improving the local area. Not giving the community what they want
I believe constructing a pool along with completing the Hallett Cove/Marino hiking trail will be fantastic for not just the local community, but for residents all across Adelaide whom which to enjoy and beautiful coastline treasures.
No pool! The pool would be amazing
Will fail to provide the health, social and economic benefits of developing the pool
No pool
It's concerning we won't get a pool
No pool so sad!
Could upkeep be hard to maintain? (Given the rocky area)

Return on investment Environmental damage Ongoing erosion No practical gain
Stays the same.
We want a pool
For children of local residents, will not be able to swim at our local beach!
1 the embankment protection will only cause more erosion 2 wait for the decision of Govt re sand replenishment of total coastline before causing more damage
Boring
No pool!!!!
There's no pool!
Nothing at all.
The embankment will be a waste of money
If no action is taken, it seems like a lot of time, energy and $$ have been wasted consulting. It's evident that the pool is something the majority of the community want to see happen. Yes, it will draw more people to the area but this is a positive thing. There is ample parking and public transport links
Nothing.
Nil.
The lack of a pool
Lack of pool Less things for young families to utilise
No pool
No pool No pool No pool
Concrete walls or other hard structures reduce the visual appeal of the area. I would prefer a pool as it provides the community with a useful amenity in exchange for combating erosion.
Why go to all this effort and not put in the pool
Cost Funding source Is it worth it?
It's better than the pool, but I'm still horrified
With hard infrastructure such as riprap there will be wave reflection and resultant beach erosion, just has what occurred a few years ago at West Beach. The only real long term solution is stabilisation of the dune with locally native plant species
Doesn't provide anymore community areas for those in council area to use
No pool
Not sure
A sea pool in the area would be great
If the Embankment protection includes building structures that prohibit the natural build up of the sand dunes
Lack of pool
I support erosion control but it will be a missed opportunity for the area not to have the pools
Nil

No concerns
Restricts positive improvement
Nothing it's a great idea
Unsure
No pool
Bad for the area, will result in environmental damage and wash outs. Could cause permanent damage like West Beach
No concerns it has to be done
No pool
Build the 50m pool
This option doesnt really add anything for beach goers an tourists
No pool. No attraction to stimulate visitors. No economic benefit from doing this.
Lack of vision No innovation No pool
No pool/missed opportunity
Access to swimming is limited without the pool. The pool is another reason for tourists and people to come to Hallett Cove.
No benefit to making Hallett Cove a destination suburb. We want to highlight what we have to offer here!
No pool
It's not an option.... Your going to spend money on nothing Think of the local area and revenue for Sa Forward think guys!! Local government are constantly holding Sa back ... look at all the other states around Australia AU Give something back to the community and Sa spend some money
Just more added rocks on the beach, I'm not sure what the purpose of this without a pool, when there is nothing in place now. The whole idea on this, was about a seaside pool, not no pool.
Lack of decent swimming areas around Hallet Cove so just having the embankment only would be disappointing.
No pool
No pool.
No pool!
Really want the pool, think it will be great for our family and the community
None
If we are doing this, lets do it properly, with a pool.
Useless
Not having a pool - reasons for pool already provided
There is no pool.
Not able to swim at Hallett Cove at all.
Parking, locals resident, the waste of money for a small town who have more cold days than hot. It's protected land and tax payers are just wasting money on something that will not be used regularly. It's not Bondi
Uglier , no discussing works and adds no ameniatly as opt 1 & 2 tackle both issues and likely at reduced cost of having pools

There should be no embankment protection. It is a cliff face, in that soil there should be no houses or anything near there. This is a natural process that should not be interrupted.
No pool is a bad idea
Not convinced this will be done in a way that will have the least impact on wildlife.
Why can't we leave nature alone. How about build the walking trail from Hallett Cove to Christine's Beach, lot more people would use this than a pool.
As above.....it's a cop out. A pool is required
Provision of a pool is what the community has asked for
Beach remains hard to use for swimmers Unable to use for leisure Will make no change to leisure
Wanting a pool everything else is being considered
Would prefer the pool to go ahead
No pool
No pool.
No pool
None - this is good for the environment in general.
The space needs more
Missing out on the opportunity to get a pool
It doesn't contain the pool
Not improving swimming access
Lack of pool
Beach is not accessible for families Still no options for swimming User unfriendly
1. There is no pool 2. There is no pool 3. There is no pool
Impact on the rest of the beach. Will we still be able to swim?
Seems like a missed opportunity to not include a pool - Hallett Cove has never been a safe swimming beach
No pool
I prefer to have a pool in the area.
The Greenies win and we end up not being able to touch the foreshore, as in previous decades !
the kind of protection chosen. if there is enough consulting done to know the true impacts of using a man-made structure to prevent erosion up-shore or down-shore side effects to natural coastal sediment movements
I'd be concerned about anything David Speirs has anything to do with. He's a narcissistic fraud with 0 values.
As per previous comment
No conerns
No pool. Wouldn't add any direct benefit to the community
No ocean pool
Why can't we have a pool??

Seems a lot of work to complete for not much outcome
No 50m pool
See answer to 16.
That there is no pool option
NA
No pool - no added value to the area
No point doing this
Waste of money
Defeats the whole purpose of the project
No pool
Seems redundant
This means No pool - no outdoor recreation (pool) facility for the public (local residents)
A misser opportunity not building a rock pool, and missed tourism
Refer to previous comments.
Won't draw people to the area
Beach not offering much to community, only those who live in nearby streets who want a private quiet area.
It doesn't do anything to enhance the way you can use the beach. (Swimming).
'-
We loose the opportunity that We can be like next Manley in Sydney e.g walking, swimming, exercising, family fun time, routine day walk, historical tour, historical educational day out etc
Waste of money.
Lots of expense for very little change to the public use. Coastal erosion is important however benefit to public also important and want to see funds beneficial for as many as possible
I do not support this option
Support of the pool.
Once this is completed there will unlikely be an option in the near future to consider adding any sort of sea pool.
No pool of course!
No pool option wouldn't help with tourism
No pool! Hallett cove needs a pool due to too many rocks at the beach making it unsafe for swimming
Would like a pool
No pool
This was previously proposed
Needs sand.
That it won't serve the community as a whole
Waste of money
Same as my answer in question one.
It's boring. The pool offers so much more potential
Looks ugly, limited value add to area
NA
Needs to be a pool/ocean bath built
Sounds like a cheap way out

In the 15 years I have lived in Hallett Cove, and been a daily beach user, I have only once witnessed tidal erosion to the southern end of the beach. How much is the sea level due to rise in next 50+ years? No mention of impact of rising sea levels on the pool. I would be happy for Marion Council to leave beach alone. I swim there regularly.
No pool
No actively exciting components
Cost, lack of detail provided
Boring and unambitious
It's disappointing and isn't really anything to do with a pool option
The beach is basically wasted without a pool. I have never taken my kids down there to swim because it's so rocky. I either have to travel to Christie's way or seacliff. This would be so much better to be close to my home.
Seems like a misuse of resources
It will make the area look terrible.
Nothing
NA
No pool
Still leaves Adelaide with no beach pool, Hallett cove continues to be an area with no place to swim, won't generate tourism, boost small business, etc.
Cost this was previously in plans
It's the 'do nothing' option. Go bold and big!
No added value
The community will not get anything out of this
Waste of tens of thousands of dollars and time drawing up plans.
none
Really would like a pook
Least concerning
Why go through all the effort without delivering on the initial premise. Residents who use hallett cove beach have wanted a safe way to swim at this beach for decades now
We are missing out on a great opportunity
No pool
Would prefer with a pool
It would be disappointing if the us didn't go ahead especially because there is such strong support from people who live nearby
Local people will have to drive to the other beaches instead of staying local
Pool would be better
Is it really needed?
Less appeal to going to this beach .
The area needs more interest. This would not add value to our area
There is no pool!
Lost opportunity, not utilising the area for the betterment of the area. Hallett cove could be so much more then just a rocky beach
Not sure what infrastructure the erosion will threaten. Why protect a toilet block and a shade structure which probably were built too close too the coast. Cheaper and more sensible to move them. The sea is huge force and will not be tamed.
Not have to open air pool, something I enjoyed when visiting the eastern states

None
That the council will cave to NIMBYism
Nil
What a waste of time it doesn't look any different
Not taking the opportunity to have a seaside pool in Adelaide.
The SAFE access & egress to swimming, snorkelling and diving sites will not be addressed. Currently one reaches swimming depth at one's own risk! I have frequently injured myself entering and leaving the water at this beach. I swim and snorkel there.
I would be deeply disappointed if the seaside pool project did not proceed.
There is no pool
No pool, not good use of space, not moving space forward in design
Why??
More not less coastal preparation is going to be needed along the metro beaches, unfortunately. Sand dune restoration, better stormwater abatement seawall and groynes need to be included. A large pool at Hallett Cove Beach won't hurt an already damaged coastline.
No pool
Protests and community riots if you don't build the pool 😂
Nothing, it's how it should be. Stop ruining our coast.
It looks ugly
Lack of a pool Lack of development in the Cove Fewer people would come to the area than if you had a pool. The upgraded Boatshed Cafe and Shopping Centre would benefit from increased people visiting the beach.
Not worth doing
Embankment protection - Leave our coastline alone, it is a beautiful area of natural beauty and geological importance.
Not having the pool
Missing the pool with still much work
The original aim was to bring in a seaside pool to Hallett Cove. This option does not fulfill this aim at all
It's a pointless & unnecessary exercise & expenditure with no gain.
Waste of time & effort. May as well do nothing & leave it alone.
Cost/Benefit appears negligible.
Nothing
Area not being used to its full potential
1) Currently the water is not all that accessible for young and old do to the rocks 2) Embankment protection with no pool would be unappealing visually 3) Embankment protection with no pool would not make best use of the space
It will do nothing to enhance the opportunity to swim at our beach
We need a pool so the beach can be used
Coast is more exposed to hazardous surf and I can't tumble turn.
Lack of swimming availability Change in government/council may see deduced focus on such so we end up with nothing of benefit to anyone. Reduced appeal in the suburb of Hallett Cove.
No pool, No Pool, No Pool

Community opposition. Including this option is a little dangerous in Adelaide. Good luck.
No concerns
I want a pool!
None
No pool Will not attract visitors to the area or the popularity of the area
I am really excited about this project and want to ride my bike to swim here. I think it's a massive draw card for tourism and such a win for locals. It's been promised and talked about and no follow through would be Terrible
Waste of money Won't bring people to the area
No community involvement. No improvement to park/beach usage for children. Not what we want.
No pool
Not making most of public access to swimming for health, fitness, well-being. Not long term vision for swimming and recreation. Lack of investment in area for now and future use.
I am in favour of a pool..my only concern is additional parking requirements
It would be a pity to let such a great opportunity to increase Hallett Cove's presence in the public pass without creating visible benefit
This is great for tourism and something for the local community, would be silly not to proceed.
No pool no where to swim. Will not bring tourist
No pool and no beach doesn't serve a purpose
No pool
Visually how it would look , it is so beautiful there it would be wrong to spoil the natural beauty
It's not a pool stupid question
Parking
No point in doing anything without putting in a pool
Support there being a pool so not supporting option 3
Everything. Hallet Cove is losing its natural environment.
Hallett cove Beach is un swimmable. It's the biggest suburb in adelaide. It's needed.
None.
No pool for the community The beach is not swimmable so a pool will create recreational activities for everyone.
Everything - Hallett cove beach will remain deserted
Little value to community
Nil
Nothing
No point
N/A
Just fixing what is already broken (archived images show bulldozers carving out the embankment). Doesn't fix the (lack of) sand issue....due to past dredging and groin built for Port Stanvac.
Missed opportunity for a great community resource.

'- poor swimming options on the beach - less attractive for tourists/visitors - environmental impacts
Waste of money.
nothing concerns me, the last thing needed is more abuse of the coastline from humans leave it alone and appreciate what is there as it is now.
Waste of time arranging this consultation
The lack of pool. The area would really benefit from a seaside pool.
no comment
No pool Reduced tourism to the area Less people visiting the beach
Swimming facilities are required at Hallett Cove beach
I believe this will be a wasted opportunity for the local community
Hallett Cove is an important Geological Heritage site and the development of embankment protection would have significant impact on the Geological site and the environment. The development will increase erosion to the embankment to the north similar to the West Beach Marina. It will impact on glacial erratics and the the rocks of the intertidal zone and have potential impacts on Kaurna dreaming story lines.
It will not help to gentrify Hallett Cove. The pools will put the area back on the map and really help local businesses.
no allocation for extra parking in area, nowhere near enough parking for upgraded facilities that are already in place
Feel like it's a massive loss to the suburb as it will attract people and bring money back to a dying shopping centre while also building the housing market.
Maintenance
Will Not add significant value
No change to existing situation.
SA not forward thinking about the family's in the state, this will help boost sa
don't like it
pointless
If you already spend funds to do something then go the full way and do a proper pool (25 or 50 meters)
Wasted opportunity
Nothing really
Will not attract people to the area
Same as above
Waste of money.
we need a pool pls i beg
Too many people mire polution damage to the environment and traffic problems there is too much development destroying once nice places I've lived here for 10 years and it's not as nice as it used to be there are close by beaches if you want to go for a swim
*|
No Concerns
Spending money but not utilising the money and area adequately

No pool
Beleive a sea pool is much needed in this area. No further points to add
No pool!
No pool
No pool
Not including the pool would defeat the purpose of the campaign
Nothing to do It's not very good for tourists Boring place
It just puts more horrible salt bush on the embankment and just maintains what's already there which is not nice looking. The lawns are great but the embankment is horrible.
No swimming at Hallett Cove
waste of money, no real benefit
I think hallett cove beach just needs something to bring the cost line together with seacliff and the board walk
There needs to be a pool.
We remain underdeveloped here in Hallett cove . We need a pool
No swimming, no real attraction to draw tourism, no real change.
No Pool - No wading pool - No real difference to what is already there - As the old saying goes " If it aint broke, don't try & fix it "
The fact that we could have a pool there but the NIMBY residents are worried about having something to do in the area.
No additional benefits; visually unappealing; no positive impact on house prices in Hallett Cove.
waste of money Not needed.
There is no more attraction than we already have. No fun for children. It's a boring concept
If there's no pool, what is the point?
No pool and opportunity for safe aquatic exercise.
Less things for kids to do in the area
There is no pool.
If you are going to invest in the protection then add an asset for the community
No place for swimming
No pool!
Just concentrate on the seaside pool proposals.
I wouldn't want it built and not a pool as well .A pool would be a great attraction to the area .
At that moment Hallett Cove beach is not swimming friendly Extra attraction First in Adelaide safe sea pool
Rather have pool
waste of council payers money
No Pool :(No Pool :(No Pool :(
Missed opportunity for SA and the local community

Nil
Lack of progress and another missed opportunity
No point spending money as no value add to the community
Hallett Cove needs a major attraction and the pool will provide that
Seems as waste of money to not improve swimming for all.
I think we can have the seaside pool and save the embankment at the same time.
Level of funding to infrastructure such as the pool in the highly paid council rates area. Having such a beautiful cove that is covered in rocks and unpleasant to swim at. Waste of an opportunity to utilise the area and funding that residence supply local council.
Non, you might as well not bother doing anything if you don't have a pool
Nothing really.
None
Nil
Lack of pool
pointless to spend money on this without a pool
There's no pool!
No added value
This won't bring people The the area like the other 2 options.
None
Looks like it's a waste of resources, if there is no pool. Local People and tourists will get attracted only by the pool and fun activities. It will boost the local business
N/A
Would be a wasted opportunity as the beach is not good for swimming currently
1. Not necessary and leave the coastal area as is if no pool added
No poll.
1. No incentive to reactivate HC SLSC 2. No significant enhancemnt in ammenity, conservation only. 3. Not an attraction.
What's the point if there's no pool?
No concerns
Waste of time Waste of money Nil user benefits
The beach is currently UNUSABLE due to the rocks and access. We want a pool (outdoors) that we can all use!
I support a pool, as this would all be a waste of time!
None but the additional parking would be good. Hint Hint
Concrete for no gain
Happy to protect the embankment but once in a genretion option for a pool also
No pool!
No real concerns, but it is nowhere near as amazing as the other options.
Nothing.

No vision for the future.
None. Keeps natural environment.
I want a pool!
The beach is not swimmer friendly whereas the pool would maximise enjoyment and encourage activity.
There's no pool, it wouldn't bring any tourism to the area, beach would still not be a swimming beach
No pool
Where's the propsed pool that the community is really looking forward to?
As long as it is properly done, no problem
Lack of pool
Nothing
Again potential legal constraints
No pool. No pool. No pool.
No pool
See above
'- won't bring people to our beautiful hallett cove.
No concerns.
Stormwater drain would probably stay in its current location
Lots of money spent with no increase to recreation
No concerns.
Not necessary
Might as well go spend a bit more if you're going to do all that work
I so love the idea of having an ocean pool nearby that I would be very sad not to see this come to fruition
Not an option
Lack of boost to local business. No safe and fun way for families to enjoy the local beach. Funding spent on something pointless instead.
Na
Is it really necessary?
Just another gardening project
What an incredible waste of money and anti-climax that would be.
No pool.
Doesn't really add anything new to the community.
Wasted opportunity, will not increase use of area, appeal of Hallett Cove.
Not much
Nil
It adds nothing with regards to the value of the beach, same old really.
No pool is a major disappointment. Its a unsafe beach for young children to swim at with all the rocks.
Any changes made to the natural environment are always negative in my view (mother nature has a plan and who are we to intervene). Concrete embankments are not as safe as people might be led to believe. Concrete is unsightly (if something MUST be done then use natural materials such as caged rocks and allow vegetation to take over.
Seems a crappy option
prevents the beach used for swimming or wading

'-
That without a seaside pool, families will use this area the same as before, the beach is rocky and poses risk to swimming so is avoided.
Need a pool
No change to the community for a high cost.
We have to have a pool
As above.
Still no usable beach.
no pool
Less attraction the area, needs beach sand for children, needs life saving supervision.
No pool, stop procrastinating and build the pool, No pool No pool
On its own this doesn't create a recreational space for swimmers, no space for children and families
what's the point
Needs a pool.
No pool.
There's no pool. Enough said.
Serves no purpose
is it really necessary? The beach area has been there relatively unchanged in the 30 years we have been using it
There is no pool
that the ;money will be spent for embankment now and in the future changed and adapted to implement the pool anyway
I am Concerned that this Non Pool Option could get up via a rigged Poll to save cost in the Short Term. There is already an incredible amount of stalling going on. The Stalling $cost to date alone would probably have covered the entire cost to build Option 1.
Irrelevant
I am not sure it is completely necessary.
No pool? not much use for the expense at all.
No community involvement No utilisation of natural resources It remains a rocky beach to which few venture
Hallett Cove needs and deserves a safe swimming area at and on the beach for all locals and visitors to enjoy full stop!!!
Marine habitat disturbance to no communal benefit as above as above
No pool
Why?
Not appealing, no tourism, will not be utilised
No pool
The residents really want a pool to swim in, this option provides only environmental benefits, but no benefit to the community.
Without a pool, the area is being wasted

This is surely not what the community wants otherwise you wouldn't have such strong support for the project
No point to tlnot have a pool
No pool, so main attraction isn't even there
No pool
Nothing
na
Hooded Plover impact
I want a pool
not enough change
N/a
no pool then no point
No benefits for recreation
It's a beautiful beach but needs more, like a sea pool.
That we have a beautiful beach that cannot be used.
No pool!
That this space will be under utilised
1. There is no pool.
Nil improvement on current stare
No improvement
no safe swimming reas
nothing
No pool
No way to swim at hallett cove
Not really a new benefit for the community in the area
Not applicable
More safe if it is pool
No Pool is being built and this adds little to no value to the community
Some of the best places on the east coast are where the ocean pools are. It is a joke that SA has almost none and don't appricitate the value of ocean pools
There's no pool!
If you're going to spend the money, may as well provide a much needed community facility
No pool
No indication of sand carting, or a seawall to try and trap sand (from longshore drift)
Waste of effort
No benefit for children Won't attract swimmers No competitive venue
Interrupt the natural sand movement of the beach. environmental impact
As far as I know Adelaide doesn't have a sea pool. So only doing the embankment works without a pool is disappointing
No pool!
No pool is a bad idea
money spent on what??

My concern is that people are only thinking of themselves and not enjoying the special environment we have here. NO pool please
N/A
walking area only. no attraction for swimming. already have plenty of walking trails.
What concerns me most is the lack of the pool.
It has no pool
No concerns
I really think the community would greatly benefit having the pool.
As above
It won't be Hollywood enough to appeal to those incapable of appreciating natural beauty. It won't become a reality.
Lack of attraction to the area compared to having a pool there.
Big investment for only short term gains. Could have a negative impact on sand movement.
Nil
It would be disappointing not to have the pool too.
Nothing it is the right thing to do
More parking
Againsy option 3.
We need pool
N/A
There is no pool just get started with the big one
N/a
No real benefit to the public or value added to the area by way of a unique amenity. Cost for ajust an embankment upgrade seems high when compared with adding the pools. Does not really change what is existing - but at an increased cost.
nc
Don't like option 3 , see reason above. Big concern is it adds no community value, just necessary erosion preventative work, that will need to be done some time in he future.
In my view it is probably not necessary to have any new structure.
Cost Cost for a project which gives the residents nothing. If an embankment is required State Government should pay the lot to protect the coast line and their coast line responsabilities
Whats the point, there is protection there anyway and a pool would be more useful
None
No additional benefits for community or to entice tourism into this area.
Prefer option 1
Minimal disturbance of Nature.
no pool
None.
None
Halley cove was sandy and the loss of beach retreating to rock embankment is unacceptable. Reduced to Swim out with the bitey big teeth sharks. Unsafe.

Hallett cove beach will only be known for the rocky beach walk
Carparking
Lack of adequate parking.
As above
Hallett Cove is a big suburb which needs more facilities
Not making the most of the beach for residents
None
Doesn't progress the suburb.
I am not concerned. Option 1sems quite sufficient.
It's boring
If already undertaking construction works, it would preferable to also improve water access with a pool so all ages can swim at this beach
There is no pool for swimming and people still venture into the water here sometimes, in places where it is not safe.
Storms will wash away attempts to concrete area as part of natural processes, geology of the area will be changed, hot concrete no good for kids
No concerns
Would be very disappointing not to have a pool.
Nil concerns other than it has no pool.
Safe and won't harm the environment
We need to move forward. A pool is a great idea. Not everyone wants to swim in the ocean and if they do, we have an abundance of beautiful beaches.
N/A
We need a pool as the beach is too rocky to enjoy. Ankle, hip breaking for those of us over 50. Have to wade out stumbling over rocks....not pleasant, not worth the risk....consequently never use that beach....too risky.
It won't benefit to make beach more attractive for the visitors. At the moment it is definitely under-utilised by the community.
I want a pool
prefer a pool
The environmental and ecological impact, the usefulness of such a proposal and the financial cost.
There is no pool
We desperately need a local pool for our neighborhood, I have kids also
Too small
Pointless
If need embankment protection, would make sense to incorporate pool as well.
why go to the trouble, you can swim there now like that
It's a single use, no actual swimming area. Generally small kids will only use it not swim
No pool
a big cost outlay with attracting visitors
Unsure of costs and benefits
Parking remains an issue weather pool installed or not Long term a pool would support community and growth in area Cost of project vs benefit to community and if a pool is installed at a later date (both cost and disruption to the area) would be incurred twice

The beach can't be swam in so the pool is perfect!
Lack of progress in developing a unique tourist attraction
Would be missing out on a great opportunity to enhance the Marion community.
No pool!
Nothing for the community, underutilising the area, missed opportunity
N/A
It only provides protection and fails to make use of /revive an otherwise excellent recreational space.
Not any benefit to community
It's not unique or interesting at all
It's boring and not going to get me using the beach any more than now
I want the pool
no community facilities no pool
No pool For swimming Not as exciting
Aren't there other areas of the coastline in greater need of embankment protection and stabilisation? Not sure if this is really a high priority site? Suggest consequence of failure is low.
'-
Does it need to be done? What are the options of leaving it any structures and regenerating coast by planting alone?
Waste of usable space and failure to encourage family/ beachside swimming in this area
I don't think there is any reason to spend the money if there is no real advantage. The cove needs a good swimming section.
No pool No pool Typical backwards way of thinking we need to get past.
No Pool. What is the point.
no pool
Wasted opportunity not doing pool, won't bring extra people to supporting businesses , council members frustration pool not approved
The area is naturally formed and will continue to be naturally formed over time by the sea - we can just let it be There is plenty of land between the sea and the houses so there is no risk to local residents in the short-medium term The project is unsightly and ruins the natural beauty of the beach
Why have protection and no pool to Attract people?
NONE
Unsure
No pool No facilities to swim Lost oppurtunity
Completely unnecessary and a waste of money.
No pool in this option
No usability for residents
No concerns if this is a protection method for the coast

If it causes more damage long term than is currently known, just like other human activities within coastal locations have caused.
Nothing
theres no pool
Realistically It will stay the same as it is now?
No comments
Cost has not been outlined Lack of good beach swimming area in Hallet Cove
This option is absolutely not what the community has asked for - we need somewhere to relax and cool down - option 3 does not provide that!
The biggest problem is that there is no pool
1 Don't use quarry rocks and stuff up the look of the beach as they have at Brighton. 2 Use existing beach rocks as necessary. 3 As a kid, an old surf club member took a bulldozer on the beach and rearranged rocks for swimmers so it's already been done.
That there was not plan for what they could do on the land side to help tackle the erosion and that this option is being sold as "just a wall" instead of a protection measure.
Beach would continue to be 'under used' by people who would enjoy swimming - because of the rocky shoreline.
We really think the pools are the way to go. This third option does not provide the fitness and wellness features of the other 2 options
Our effort to keep all Marion coast as natural as possible has failed for several years now. Vistas spoilt with meaning less signs and badly placed.A past example is 3 posts in concrete on Jervoice Tce boat ramp with unknown use, one is now erroded into low tide area. We removed all visual past mistakes on the planning and building the coastal Walking trail but feel we cannot trust the current council in option 3.
No pool
Watse on Money and resources, this improvement will not help the economy or local area. Whats the point.
May not be as effective as a combined pool and embankment structure. No further comment.
No pool
None
I hope the threat of erosion is real
Open to sea and safety
As above
No safe swimming environment for children No increased tourism or amenities No increased accessibility to swimming and aquarobics for elderly and disabled people.
If the scientists have it wrong and it's not effective- eg past errors when installed man made structures and changes off shore that have interfered with natural sand drift etc
It only deals with emberkment but not with the fact that we have beautiful but unusable beach
Missed opportunity
Lack of pool
none
Missed opportunity
Lack of thought to extra beachside fun for local kids/teens

The possibility that there won't be a pool in Hallett Cove Beach. Everyone wants the 50m pool, just do it :)
No real improvement for the community
Leave it alone. It's fine as is. Over time the more natural u can leave a place the high in value either environmentally and value it will be. Stop this terrible English idea
Nobody will visit the beach
I think a pool is the best option as the best is too rocky to access (for swimming)
No obvious improvement
AS LONG AS IT IS MAINTAINED, LOOKED AFTER THIS SI A CONCERN THAT SOMETIMES THE COUNCIL DOES NOT LOOK AFTER INFRASTRUCTURE GOOD ENOUGH
There is no pool.
It will not provide a place for the community to swim.
We need beach pools down South
See above explanation.
nil
This should be a standard and community expected coastal protection measure anyway without need for special consideration and funding. This may divert attention from the more important issue of bringing quality sand back to Hallett Cove beach which is extremely overdue and ignored by council and as govt.
It would just be a bland concrete structure that would appear to have no relevance, although it would, who would know that.
I'd rather have a Jetty. This options adds no value, nothing will change. waste of money.
Cost and Maintenance: Building and maintaining a seaside pool and embankment protection can be costly, with ongoing expenses for cleaning, maintenance, and repairs. Ensuring sufficient funding and resources for long-term management could be a concern.
Under-utilisation.
Nil
No pool No pool No pool
There isn't a pool option for adults or children. I don't see the benefit of option 3 to the Hallett cove and wider community.
Stormwater still discharges onto the beach, where it could still add pollution if any that washes from weirs and affects people, fauna, flora and dogs. No real effect to look at pollutition reduction, or nature conservation beyond embankment
none
None
None
Having a sea pool would be the better option (Kingscote's sea pool is a great tourist and lifestyle drawcard). Option 3 falls short of improving Hallett Cove's shoreline. Not being serious about Hallett Cove's amenity
There not being a pool
No particular concerns, except that it will not facilitate swimming
Not much, it is the better option than the other 2
Nothing in general
We need free healthy lifestyle options for community, and a pool would help with this.

Possibly any pollution caused, we have not seen any plans on pollution mitigation or minimization but if it needs to be done for the project to protect the natural embankment into the future then it needs to be done.
Nothing
Reports suggest ongoing erosion since 1975 is not significant.
No pool and no great benefit of what is in place now.
The production of concrete causes greenhouse gases, therefore to pollute the shoreline with concrete to protect a filled gully, with no infrastructure, from erosion is non-sensical, as the playground can be moved if an when necessary. Dunes at the mouth of the Field River are eroding, because when the ramp was modified, the advice of a geologist, on how to prevent storm surges from running up it and causing erosion, was ignored. Concrete is not the answer, and nor are more contaminating dolomite rocks. Any sediment from erosion will be negligible, compared with what Council allowed to flow from Waterfall Creek from 2010-2020, and what will continue from that stream if Council do not modify Glade Crescent dam 3 into a detention dam, to stop the flash flooding that will occur with climate change.
No pool No fun No happy people
Potential impacts of the construction process on nesting hooded plovers and other environmental factors, as well as the potential negative visual impacts on the natural beauty and amenity of the area. I am keen to see the issue of erosion addressed in a manner that least impacts the environment.
Costs Traffic, pollution, noise, crime Negative impact on environment
Ongoing costs for maintenence
Lots of concrete
The first option suits our family best and if possible I would like to see that option completed. Embankment protection should also be done.
Waste of money.
It won't offer good swimming option for residents and visitors. It feels like some years of seaside pool consideration came to nothing. Doesn't offer protection to various surf conditions.
Option 3 is the best option
Embankment is already in place. Coastal protection is nothing to do with raising money for a Seaside Pool for the community.
The pool would be great as it would attract tourist and be great for the community
Missing out on the opportunity of a seaside pool.
Nil
Least preferred option as no pool Less advantage for community
No pool for socialising
I think this is an opportunity to make a serious improvement to our beach and provide an asset to be proud of. Settling for just the wall would be a shame.
Nothing

Nil
The platform geology in that area would be destroyed. It is part of a geological monument recording world history going back 850 million years. Thanks to the underlying geology the beach and cliffs are well protected from erosion and scouring & interrupting the present beach curve and profile would immediately encourage erosion. It must be left as is to maintain the present stability. An expensive 'white elephant' would replace a unique educational resource and there would be no retrieving what had been destroyed.
The high cost, which is not justified by the limited number of potential users. The impact on the environment. The ongoing maintenance cost, which will need to be met by rate payers.
None
1. The residents have been wanting and been promised a tidal pool for many years. 2. The existing beach is not 'swim friendly in a rapidly growing suburb. 3. A great opportunity to add value to the Hallett Cove foreshore would be lost.
Na
Nothing
Boring
Missed opportunity for the sea side pool. Hallett Cove beach is so popular. It would be amazing to have the sea side pool as another activity/attraction to the area
No added draw card to area No pool
Nothing
Unsure on impact to the view of the landscape, but I assume the embankment protection is necessary (I didn't read the report that closely) and at least the impact should be far less than with the pools
We have the opportunity to build something totally unique to South Australia (50m sea side pool), whilst protecting our shoreline - why would we choose not to develop the space for recreational activities to be enjoyed by the community?!
No concerns
It does not offer any new service to the community to enjoy our neighbourhood.
The possibility of a pool in Hallet Cove has been discussed for a while so it would be a shame to not follow through with one.
It has no pool
NIL
1. Embankment protection measures for the Cove should commence as soon as possible and not be delayed for the construction of seaside pools. 2. Armoring the embankment proposed along the Heron Way should attempt to match with the surrounding natural conditions. 3. A compatible embankment protection should allow for future extension to protect the embankment to the south of Heron Way in front of Cormorant Drive.
No pool
The pool is the big attraction.
No pool
n/a
none

No 25m or 50m pool No wading pool No water/amenity
Not required
No pool Coast more exposed to hazardous surf Missing out on tourism
Why stop at embankment protection when we could do so much better
What are councils palns for safegurading this coast long term? Simply leaving it to nature may not be enough to ensure it flourishes
Visual cost
I like 50mt pool
No real change for visitors and locals
As previously stated preserving a unique area.
Adds zero value
Unnatural Not needed Adding concrete to an area of natural beauty and geological significance
Would still need to be planned and maintained with expertise and ongoing consideration. Would hate to see it treated as a cheap option that doesn't need as much thought or care

Do you have any other feedback that you would like to provide on these options?

The natural beauty of this coast should be retained and protected. A pool deteriorates this natural beauty. There are great swimming beaches very close by. This money should be spent on more important community projects.
you must increase car parking
Fantastic work so far, would be a shame if all the good work never came to fruition with a sea side pool. Hope we can take this chance to enhance Hallett Cove beach
Believe Pool should be heated for year round use
No
The pool at the end of the track makes so much sense And personally, living in HCB and driving to silver sands for a swim on hot days (and we will be getting more of them) is frustrating It's a tantalising proposition
Thanks for progressing this exciting project. Beach pools are tourist destinations on the Eastern seaboard.
A 50 m pool would be a welcome public resource that is healthy and promotes a outdoors activity for all ages.
I like both one and two... but feel option one is a little to big and in your face. Option two with a slightly bigger pool would be perfect... so everyone can benifit EFG; kids, lap swimmers, general
The Hallett Cove coastal area is a very unique natural environment that should be protected for current and future generations. Invasive developments such as the seaside pools do not complement the natural amenity and environment of the area. The City of Marion is very fortunate to already have many conventional swimming options including beaches at Kingston Park, Seacliff and Brighton additional to several world class pools for those who don't enjoy snorkelling, surfing and swimming at the magical Hallett Cove Beach. This area was protected many years ago for future generations when plans to develop a marina did not proceed due to public concern. It would be a travesty to see this natural wonder lost to the seaside pools, in particular when there are many other swimming areas available to City of Marion residents who don't like natural landscapes that include rocks and tidal pools.
Love the idea of a pool ideally where we can do laps Needs good management of parking concerns (eg suggestion make grand central avenue and Dutchman drive one way only and allow for angle parking along both roads
This is a great opportunity to create something unique for the area.
currently the beach is unusable due to the rocks, this will create an attraction for Hallett Cove, the community and nearby business. It is something no other beach in Adelaide has
we regularly go to this location ... the road network for people to get to the location would need to be better signposted and some consideration for the amenities and parking for users of the new facilities.
I firmly believe the Swimming Pool concept & project should NOT have been progressed once experts determined the proposed swimming pool could NOT be replenished by the natural tidal movement of the incoming & outgoing tide due to the shallow profile (Glacial Shelf) of Hallett Cove Beach. All 3 proposed concepts look "damn ugly" & will adversely impact the natural beach & rocks we have at Hallett Cove Beach.
Please do a proper consultation of the almost 100k ratepayers in Marion before you waste such amounts of money, and you change our character forever. It looks like a concrete jungle with rocks which I fear will make their way into the pools.
Very keen on children's shallow depth area for our young ones. A lot of Families in Hallett Cove with young families could really benefit from this.

Infrastructure SA or Infeastructure Australia should be engaged. It'd be a first project of this kind in SA metro area, boosting tourism, which federal government should support
A pool will be a HUGE asset to the area.
Council are doing a great job with upgrading parks and walkways . This is not needed and will spoil a beautiful area with the artificial concrete plonked in the natural environment .
not everyone will benefit from the pool. use the money for something that can be treasured by everyone.
Parking needs to be considered - particularly for residents close by
Yes, as a resident of 1 Grand Central Avenue, carparking in the busy summer periods becomes a genuine safety issue for local residents and visitors. On summer weekends/school holidays, lower Grand Central Avenue has cars parked on both the northern and southern side of the street, allowing space for only single cars to travel through. On numerous occasions, I have witnessed incidents where cars driving down the hill (heading towards to the coast) are required to slam on their brakes as they compete for the single access with slower vehicles driving up the hills. This is really quite dangerous and I'm certain will inevitably result in an accident in the future. Clearly infrastructure like this is going to increase traffic in the local community. I believe utilizing a portion of the park area to add additional car parking spaces on Heron Way is absolutely vital.
As a swim teacher and life guard this would be the best for the community and highly support this project
Have you considered access for emergency vehicles?
The people complaining don't care about the environment or the parking. They are stuck in their way. We need to protect that wall so a pool is great. So many kids and families in the area will be outside in the sun getting fit. It's great for the area and kids
Thank you
Great initiative my marion council
Such a great idea, I myself learnt to swim in a tidal pool in Northern Ireland... have many a found memory. Fingers crossed this plan goes ahead as it would be an amazing asset to the area.
No
1 the pool and the embankment protection will only cause more erosion 2 wait for the decision of Govt re sand replenishment of total coastline before causing more damage
As a resident and triathlete, who is allergic to chlorine with asthma, the 50m seaside pool is so EXCITING!!! I am in full support. Also exciting development for my community and me personally, especially if there are lane ropes for proper swimming 🏊
50m pool is the best proposal
Please do not proceed with this expensive, unnecessary white elephant that hasn't even secured funding.
Please build it!
Make a pool
No
I'm a swimmer using both Marion Outdoor pool and the aquatic centre since they were built. I know a 50m beach pool will get used
Please make this happen.. it will be the jewel of the coast
Please reconsider. what the area will look like in 10/20/30 years time after it's been thoroughly trashed by outsider pool users

Please consider natural solutions to rising sea level and erosion such as habitat restoration of the dune, offshore sea grass beds and reefs
Please communicate updates regularly with residents
Please do it!
Waste of money and time. Don't ruin Hallett cove beach.
Looking forward to the opening of the pool.
Would like to know the costs to ratepayers for the upkeep and maintenance of the pool as well as managing it. Who will ge maintaining both the pool and embankment and how will the pool impact the environment
Not many people are responding to the initial surveys from what I understand. I think people feel they won't be listed to anyhow. I am concerned decisions will be made based on those keen for a pool who have not bothered to consider the down stream cost, maintenance, environmental issues etc. Not everyone can access FB for this survey so you have a limited audience. Older people may not be aware.
Please approve it and make it happen. The area is desperate for it
I think building the pool is great for community development and strongly support the concept of the 50m pool
I think option 2 is a better balance.
Go big the first time around and don't waste money upgrading to a bigger size later. Make sure there is sufficient free parking available.
Il think Adelaide needs a seaside pool and Hallett Cove is a perfect location for this. The sea has been relatively unusable for swimming and the rock pool would really improve this. The environmental issues have been catered for.
If you can't increase the parking available I wouldn't go ahead.
Go big. Do it right.
Please consider carparking in the area as well
Stop holding SA back... local government please spend some money on these kind of projects. Look at all the other states in Australia AU We're looked on as a backward state ... seriously come on get your finger out and change things
A 3d plan for people to see would be good. Bring on the pool, hurts your feet trying to walk out in that water. If it wasn't for O'Sullivan's beach boat ramp that caused the natural flow of sand, we wouldn't of had this issue and it would of been a beautiful usable beach.
Swimming is a great exercise and group activity for older persons. No cost to enjoying exercise and to socialise. Makes the beach area more useful and enjoyable especially for children who can wade safely
Shade and public table and chair
Would there be change rooms,toilet facilities etc.
N/a
Car parking will also be important, and think the pool will be fantastic for the area!
No
For the extra $1.1m, 14%, there is no discussion. 50m pool all the way, lets do it right.
Traffic issue on Grand Central Avenue So many cars go past already Need a permanent road closure somewhere on the road so all the visitors have to go through other roads to get to the beach
Would prefer option one but would take option 2.

Thank you for working on this project. I think it's really exciting and hope to take my children swimming there in the near future.
I hope everything environmentally will be taken care of with thought for the future and consideration of what is there already.
May possibly increase value of homes in the area as the beach area becomes more useful.
There should be no embankment protection or pool.
As humans, we have caused enough damage to our planet. Humans are so selfish. There is no need for this pool other than selfish reasons. Money should be put towards helping the environment, not doing unnecessary things to it just for humans. The impact on the environment will be huge with more people, more traffic and, without a doubt, more pollution.
When Field river had outflow we assume the pool will remain empty?
If you do a pool as large as possible is best as cost differentiation between sizes would not be great. No pool is lousy after all the surveys etc.....
A small groyne to bring back sand to the area
As a family of a large range of ages, we are very supportive of the pool at Hallett cove beach. Great for families with young children, Middle Ages who want to swim laps, and older generations who want cool water for health reasons
More parking
Continuous concern for parking and maintenance including toilet facilities
No
I strongly support a pool
I'm concerned with the parking, but for the local kids and community the pool will be awesome fun in the summer months.
It would be great for the development of the suburb
There must be a discussion around the provision of adequate parking for any of the options that actually include a pool. The idea is a fantastic one and would be a runaway success but could be brought undone by something as basic as where to park.
The lighting and upkeep of the sidewalks leading to the beach, as well as the number of visitors using the reserve without respect for the rules: especially dogs in the reserve and drone flying in the reserve may grow. Noise pollution is a real concern. What noise abatement is planned?
Work already completed at the foreshore, together with the Boatshed Cafe, has resulted in many more people there on weekends which is good to see. I think a seaside pool would be quite a draw card too. Car parking could become an issue. Maybe ensuring all comms plans include details re public transport access ie train with bus stop out front of pool would help reduce traffic flow.
I have enjoyed swimming in pools in Newcastle and Sydney. It would be amazing to have a local outdoor pool during the summer months. Parking issues could be solved by providing a bus service (similar to or extension of railway station bus service) . Looking forward to its opening. Thank you,
Another consideration for the pool - ensuring they have accessibility rails alongside the ramps and other requirements to help and assist families and people with accessibility needs.
You must protect the surf break at Hallett Cove, may need to move the proposed pool further North
I, personally, having lived in Hallet Cove for 44 years and on to my next generation just want a place where local kids and adults can go on a hot day (visit our playgrounds on a 30 + day and see how empty they are) and enjoy our beautiful suburb instead of having to get in the car and travel north or south to reach a decent beach without feet cutting rocks I would also like a small part of the beach cleared of rocks to enjoy ..thank you, John Swan
I am most worried what it means for the natural environment and the unforeseen changes that will occur. A cement structure embedded in the coast line is permanent and is no longer practiced for this reason since the 1990s. I think there is a reason in this that it is difficult to maintain and run and

places that can no longer maintain their ocean pools have left them as abandoned - the landscape remains scarred. We should take these lessons as an example and not try to be NSW and find other ways to attract tourists to the area if this is the goal.
Victor Wenbamyama will lead the league in blocks as a rookie
There has to be a very feasable plan for parking as this will impact residents a lot. I think on a very hot day the expected visitor numbers are too low. The train station isn't that far away and hasnt been taken into consideration.
Unnecessary waste of ratepayers $$
SA need to catch with the other states.
Please make this happen. I love living in Hallett cove and this would be the icing on the cake. Great family suburb.
If a pool is built, there really needs to be more parking to go with this.
The 50m pool will allow for people of different cultures to integrate within their own comfort levels.
THERE ARE MORE IMPORTANT THINGS FOR THE COUNCIL TO USE MY RATEPEYER MONEY ON, NOT A POOL.
As we don't use the ocean we would love somewhere to take the toddler and teenager as a family. Would be great for safe tourism attraction aswell
Please build option 1, it would be great for local residents to use the beach for swimming.
Possible lighting of pools at night,
Outdoor showers. Change rooms
If you are going to build such a great concept build the best option first to save ratepayer money because you will start using the other option and then decide to upgrade costing more in the long run, do it right the first time
I like either option 1 or 2 but either choice, this will mean a great outdoor and unique facility for the Hallett Cove area in which I have lived for 44 years. (I am one of the pioneers). I have seen Hallett Cove expand and grow over this time and to have a seaside pool would be awesome.
Please take into consideration extra car parking needed to cope with visitors this will bring
Refer to previous comments. Please save the surf spot.
I would like to see this option 1 design turn into reality with funding and construction starting.
I hope the pools are heated.
Let's make it reality
Option 1 a real investment in the area and a facility for generations to come.
As a swimmer it would be a great addition to our coast and will help prevent erosion of Hallett cove foreshore
The 50m provides a safer environment to sea swim, no rips or no sharks!
This will be a great way to get people active in the area. It is a very under-utilised beach. Maybe a groyne or similar structure might be worth to get a sandy section of the beach to form
It would be truely fantastic and well used facility
This would be incredible for SA!!
My grandparents lived in hallet cove for decades and were heavily involved in the community with being president and treasurer of the lions club for many years, my grandad grew the plants and flowers at the train station each weekend and painted over any graffiti making it one of the most beautiful and well looked after train stations in Adelaide for many years. My grandparents also played a pivotal role in establishing the meals on wheels kitchen. We used to walk to this beach from their house regularly and walk up the cliffs before the boardwalk was even established.. I would love

to see this beach continue to be a beautiful centre piece for the community that my grandparents cherished and worked so selflessly to support.
We live a few minutes walk from the proposal, we are concerned about parking and pool management. We would like free or low cost access for locals. We think it looks excellent and fully support.
Please put a pool in and big enough for everyone.
Don't change natural coast line . The on going costs of maintenance pool pumps constantly being corroded and abrasive sand will add to rate payers . The bbq area at night is already invaded with drinkers and we have had to phone sapol manytimes last summer
We could also add a break water to the left of the bay at Hallett cove to enable the Sand to build up preventing the erosion of the embankments
No
Drunken behaviour . From people outside of Hallett cove late night music . What safety is going to happen lifesaving pool life guards what happens if some one drowns
Car parking is required or it will put people off
We don't need a sea pool, that'll be vandalised and have blue ringed octopus use it. And no doubt, like the BMX track, it won't be built properly the first time. So will need to be fixed up after a few years.
I grew up spending all my youth at this beach with friends, surfing in the storms, sitting in our cars in the old car park that's no longer there. Having a pool on the beach is unnatural and will be ugly and a traffic and parking night mare for all other beach users and residents
I love option one. It would be amazing for my family to enjoy. It would be great for the community socially and for physical activity.
I see the need for coastal protection, but little evidence of this occurring at Hallett Cove. Can you please provide data and results of coastal erosion survey
I think it would be great for the community
We don't need any additional facilities just for sake of "development".
Please build it! We need this kind of attraction for young and old alike on Adelaide
The pool will be a great addition to the area and allow for swimming during summer months. It looks world class and rivals the likes of Bronte rock pool and ice bergs in Bondi. If it doesn't effect the environment it's a no brainer!
Has the council even considered stability of the pool, maintenance, safety, disability access, rate payers voices and those living directly above the area as well as car parking, excess traffic on the roads and safety? Who's maintaining it for movement etc?
Well done, a much needed amenity in the area.
Car park needs to be improved
I have lived in this area since 1993, love the community and have enjoyed watching the enhancements of the beach. Do I miss the quiet? Sometimes. Do I like what it has done for the community? Absolutely! This will be a scary step, to be sure but I think in the long run, if done well it will be a huge success
Just don't do it, council haven't thought about this long and hard at all, it's a waste of money, and the weather in Adelaide doesn't help, the excitement will wear off and it will just sit there as an eye sore.
Great for Hallett cove and South Australia tourism and everyday use
Parking, parking, parking. An additional 7 spaces, not enough. I was down there on a winters day, Friday and there were no free parks. What will it be like in summer with the pool added? The design looks at parking within 450m - seriously? Who walks 1/2 a kilometer to go for a swim? All for the pool, but consider the poor neighbours who'll have visitors parking in their streets.

Please leave the cove for the marine life , humans have enough ..Aren't we supposed to conserve a conservation park not commercialise it ?
The beach needs something safe where we can swim without the risks on the rocks
This would be a great inclusion for the area. Supporting a safe and healthy lifestyle for local residents and families.
It would be great to see more beachside infrastructure to the surrounding area, cabanas, science education of the area, support for local small businesses, a pull up area specifically for food trucks to cater.
no
Good luck with the project it's a great idea fro such a rocky beach
Less is more
only concern is the parking and the impact for the residents nearby. A parking area nearby with in walking distance would be an idea to consider
My parents would love to have a pool to go to where they don't have the stress of the sharks and they can train like they do indoor
Pool fence safety is critical to prevent child/ infant drowning
This will bring so much needed interest to our area. We have the quarry destroying our aviews.. vibrations can be felt They should be paying massively into our area. My view of the hills is changing and it concerns me. Why have they not been paying large land rates that go directly into the area they help destroy. Not adding agrogate pathways and trees around marion shopping centre..... My land rates have gone up massively and all we got was 3 trees at the top of our street and an ever expanding quarry
I belive the 50m pool would be a fantastic addition to the area and for the community. It needs to be managed properly , traffic ,noise, antisocial behaviour and people using pool at inappropriate hours , the area could be improved and be a destination for all of SA . I also belive the use of sea groins to retain the sand that accumulates in winter on the beach and more cafe options at south end of the beach, something that could be managed by the boatshed cafe or independent
I would like to say no intervention but as a second choice option 3. I don't want my voice to be silenced by the design if the survey.
When will it Happen
I lived in Sydney eastern suburbs for 5 years. Sea pools are common there, great to use, and highly utilised by the community
It needs some sort of shade for the kids pool and where the parents can sit and supervise.
Whilst the idea of a sea pool is a good one, I feel it would better utilised at a beach with the infrastructure already in place... Christie's, Kingston or Noarlunga. Hallett cove is a conservation area & should be kept that way. Over commercialising the area will damage the fragile environment.
Yes, please do not listen to the geriatrics that will likely be dead before this pool is even completed.
Go hard or go home as my kids say. 50m all the way anything else is a waste of money
Having Option 1 or 2 would VASTLY improve public amenity for this under-utilised beach. So much is in place already, the Reserve is wonderful as is, a beaut lawned area already. The Park is a walker's wonderland and the under water views at the intertidal zone are a treasure. A swimming pool won't detract from any of these. I'm content with shingle beach too, no sane needs to be tracked in. The worst that will occur is sand will accrete on southern edge of pool, but Field river

mouth closes off naturally, periodically currently. I'd expect some silt deposit north of pool during construction, but this has happened periodically before (Stanvac works, desal plant construction, even during Christie's Creek rehab work) so a liittle bit more won't alter current, already disturbed state of The Cove's waters.
No
Major concerns of nearby resident is the parking. People aren't going to come on train. They're going to bring cars and park all over the local area as happens now and that's without a pool. There simply is just not enough parking or infrastructure for more parking with turning this beautiful natural area into a concrete jungle.
We have highlighted lack of parking which does not impact on residents between rail line and beach. We live further from the beach and are unlikely to be affected by this lack of parking, but we would only support the pool options if the majority of residents in that beachside area were also in support
No
It is difficult to be sure on the size in the illustrations
Stop ruining our coast. I grew up and lived in Hallett Cove for 27 years. Leave it the way it is now. This will be an eyesore, we aren't Sydney, we want nature in its natural state.
Keep chipping away!!
Parking could become an issue. Council could survey and improve parking along nearby streets to maximize parking. Parking bays in the area would need to have lines marked. Many locals use parking near their homes for permanent trailer (as permanent skip for businesses) and caravan parking. Council could inspect and monitor how residents use parking, and stop people operating businesses from their properties, in a residential area. Some local homeowners can't park on their property due to excessive industrial waste, supplies, activities (commercial welding) and equipment. I personally don't have a problem with pool users parking in my street, however I am concerned about residents who overflow into the streets.
Need more parking. Or a council funded shuttle bus (free to public) from HC station to the beach and back. There will not be enough parking to meet need for the pool.
If you are going to build a pool, try for a design that blends into the beautiful surroundings, widen the road and add some car parking. It already gets congested with people accessing the playground and walking trails.
I think a rock pool would be a big attraction what with the rocky beach not being very inviting.
The concept looks Fantastic! I love the idea of the pool at our beach. I truly hope it comes to fruition. Really looks Amazing! Very excited about the possibilities and opportunities ahead :)
I'm eagerly awaiting the sea pool to finally have a safe place to swim & exercise in the seawater.
Heron Way Reserve is already very popular & this pool will be an exceptional addition. I eagerly await its construction.
Heron Way Reserve is a very popular location throughout the year, and particularly in the warmer months, and the seaside pool would be well utilised. Further, the attraction of Hallett Cove Conservation Park is an additional draw card to the area.
Not at this stage except to Thank David Speirs for starting the possibility.
Really hope this plan gets succeeds, it would be wonderful for residents and visitors to Hallett Cove.
Such a great idea for a beautiful area. We need safe swimming and encouragement to get put kids out and enjoying nature!
Please make this happen, it will be so good for families, community, children, business and residents!
This is a unique beachside location and there is no opportunity to use the beach for anything other than to look at. Creating a swimming area and a sandy beach would return this beach to the wonderful playground it used to be decades ago - before the refinery destroyed it.

Will be amazing fun for all families to use in hallett cove
It is a great idea, too many people complaining about parking, how many people do you think are actually going to use it? , I am pretty sure it will work out like it usually does
Great to see something progressive being considered in Adelaide.
The bigger pool will be worth the effort. Don't bother otherwise,
This will be a phenomenal initiative that is going to get a lot of attention and attract us locals there for more than just walking, so don't forget parking!
I look forward to seeing what outcome occurs for the local community
Pool options brilliant idea in my opinion. If funding can be arranged I'm in full support of it
Have a lifeguard team consult on your plans. I've worked at 3 brand-new pools and they didn't consider where to put the lane rope reels, didn't put in lane rope hooks in the pools, didn't make the pools visible/ created blind spots, put the deep end of the competition pool closest to the kiddy pool, forget to put in a staff room, just forget to add all the things that you need for a functional Aquatic facility.
Wonderful idea and strongly support 50m pool!
Only option to choose is option 1, all other options are unsatisfactory. Make the right decision and get it built. Dont be tight arses or give in to negatives.
No
I would love to have access to a sea pool for myself for swimming and recreation. Sea water is healthy for my body, chlorine pools cause me skin and breathing irritation. Recreation for me and my grandkids. I support the financial investment and long term opportunities for me and future generations. Sea pools are the best fun, I have great memories of swimming at Manly outdoor sea pool.
It is very important that the local residents are kept in the loop. This area is already very popular & with the refurbishments to the Bostshed & the coastal walk to open soon, it is only going to increase in popularity....before the pool even arrives. Parking needs to be thought through very carefully. If it is...then this pool will be a wonderful addition to an already outstanding area of beauty.
Marion is doing a great job with the community consultation on this job, and generally. The outcome of this survey will be what it will be, but what a great team are you all, thank you for consulting with us and considering the public's viewpoints so much. Dirk
I feel that if this happens There will not be enough car parking
It will be used greatly as it will be safe, bring more tourist to the area, need more car park though if it happens and more shade areas
I think this is a great idea for the whole area.
Stop talking about it a get things moving
Please expedite the project as these things take too long. Unnecessarily long program times which government or council projects have a reputation for and trades exploit for their financial gain.
We desperately need more parking at the beach, there's not enough parking now!
Amphitheatre is never used. Maybe this land could be parking
Hallet Cove is losing its natural environment.
Parking and access needs to be considered. Food and commerce options?
Either Option 1 or 2 - extra car parking WILL be required. At least 50 new spaces in proximity to the pool area. It is hard enough getting a park on a weekend in that area as it is!
make sure there is enough parking for all the rest of Adelaide
Excellent initiative for the are

I think it is a wonderful idea to build the 50 m seaside pool as it will give all people, young, old and disabled a wonderful place to go and swim. Hallett Cove beach is perfect for this type of concept pool!
Hallett Cove beach is desperate for life to join the beautiful coastal boardwalk & then finish with the ability to rather cool off in the wading pool or some laps in an exercise pool. Strongly urge option 1 as it covers both aspects of people wanting to relax & exercise, it will gain momentum & bring head counts through Hallett Cove which will only boost the number of people who will then travel through the struggling and currently under-development shopping centre which will are all aware needs more heads through those doors. Option 2 is merely a waste of time as it will not increase people wanting to go there instead of Brighton etc.
This would be amazing for the local resident and for people visiting the walking trial and restaurants
Be amazing draw card for visitors
Hallett Cove is a unique natural rocky beach that provides opportunities to walk, surf, swim, snorkel, fish and canoe. As a rate payer, I am already contributing via my City of Marion rates for two swimming pools, and I am not prepared to contribute to a third. I am NOT willing to pay to destroy this wonderful natural coastal environment. A cement pool should not be built on Hallett Cove beach for the few who are not comfortable swimming in the ocean or can't deal with rocks under their feet. The City of Marion has been entrusted to care for the unique and unspoilt coastal areas of Marino and Hallett Cove. People visit these areas to appreciate the rugged beauty and unique rock formations. Please don't ruin this unique environment by building a cement swimming pool on the beach.
If I had the choice of a pool or sand returned, I would choose sand. Then more of the beach could be used, all year round.
Erosion prevention I have no objection to. Let us honor the untouched shores. Those precious moments in areas where I can find solace within its serene embrace. Amidst the clamor, chaos, and relentless frenzy that pervade our current existence, the beach stands as a haven. However, adorning its sands with the throngs of people merely for the sake of embellishment shall only sow desolation and vexation upon those who seek respite. A multitude has spoken, voices echoing the sentiment of those who yearn to find solace and tranquility in chosen corners of this seaside refuge. Alas, the allure of commercial gain prevails, for it is profit that seeks to summon a multitude. Once their purpose is fulfilled, shall we witness the rise in cost? Nay, it is unnecessary to introduce any aquatic embellishments to this sanctuary. Let us allocate those funds with wisdom, directing them towards ventures that would benefit all. Not just the few who live nearby. Consider, for instance, the construction of a pedestrian underpass, near the intersection of Lonsdale Road and Ramrod Avenue, as originally envisaged—a project worthy of investment.
This would greatly enhance the beach and area in general. It would be the perfect spot to finally have a metropolitan sea side pool.
I pick up all beach rubbish 3-4 weekly for 18 months so far. Especially Field River estuary - plastic/spray can rubbish very bad. (see F adopt a Spot Scheme)
This would be great for our community. Please please please go ahead with option 1 or 2! The hope of the sea pool is the main thing keeping us in Hallett cove otherwise we will move further south
Would love to see Option 1 - 50m seaside pool and embankment protection option delivered by Marion Council in collaboration with State or Federal Funding. Would love to see my rates and taxes paid go to this project.
I've found parking difficult in the warmer months. This will need to be considered.
longer planning takes higher the costs to build will be , what david spiers as done for this community is fantastic let's keep making hallett cove even more fantastic place to live
Hallet Cove is a Geological Heritage Site and development should not be considered adjacent to this site due to the risk of damage.

I would like to know any changes to restrictions around dog walking on the beach. This is one of the only dog friendly beaches in summer and I would not like to lose that. Also with the development of the new bridges, the boatshed and now the sea pool it would be excellent if dogs could be allowed in the Hallett Cove conservation park to make the whole stretch dog friendly.
money could be better spent providing better shade to exiting areas
I hope this goes ahead
Nope
It's about time we had this type of pool, could never understand why we never had one in the past, was an embarrassment to all other states, that's why they call SA the back ward state, get this going to energise the state, large waterpark is overdue too
At the moment Hallett Cove beach is a really nice place to go as it is not as overcrowded as other places. The parking as it is can be daunting so adding more reason to come to Hallett Cove beach will add to the traffic and to parking problems. If this can be overcome in a conservatorial way then maybe the smaller pool would be fine. I am not convinced that this can be done.
No
Stop procrastinating and develop the pool to enhance an already beautiful area. This idea has been going on for far too long just make a decision and do it!!!
Be the lead council to do this and hopefully others will follow soon to make SA beach spots as amazing as some interstate ones! Also have a monthly market at the beach, live music etc... (I can't believe how many people come to Midil Beach in Darwin every Thursday and it's amazing!! - Adelaide needs something like this too!)
Would love to see mosaic art around the pool area with 1/2 shade over the pool area eg rock build columns to have solar power operated shades, power outlets, seating area for families made out of rocks and concrete in colours and visual arts with nature sea plants. Access by wheelchair and taps and shower tap to wash salt off. Have access to bathrooms self clean. More parking will be needed for access pools. Maybe have Marion council give pool/ parking car tags to locals over visitors parking.
Lets make it happen
Biggest concern is parking . We are regular visitors to Boatshed cafe and I can see all car parks taken in summer with no way of being able to get to Caf.
Just built the 50m pool already.
This place was once a quiet place to go and relax but like every where else lately is bring ruined by over population
I think we should do this. Adelaide so often is reluctant to change which puts younger people off staying and making a life here, so they head to the eastern states. Let's stop being sticks in the mud and embrace change
A 50n pool would be great for Hallett Cove, as it would create more entertainment and cause locals to talk more and kids to enjoy more.
Number 3 option is the least intrusive but would prefer it to be left alone there is way too much unnecessary development these days ruining nice quiet locations
If a pool is to go ahead, where do you expect people to park, as it is people park up Grand Central which is a thoroughfare and parking on opposite sides of the road makes driving this route impossible in summer.
No
No

As a peak body for water safety in South Australia, we would like to offer our services to assist with any design considerations that pose potential safety issues to the community. It is vital to ensure that this body of water is safe and has appropriate support systems in place.
1) Lack of car parking is a major issue. I suggest this needs to be investigated immediately as it will impact on the total project cost. 2) Could the pool site be revised further up the embankment or to even higher ground? This would lessen the impact of storm damage, possibly cost far less to construct, be easier to access. The offset being a bigger pumping system would be required to lift the water to the higher site.
Please consider parking - for residents and access!!
We've been waiting for a long time. We are excited to see changes in Hallett cove Beach it's good for community.
I assume that the construction of a pool is being proposed is to allow Hallett Cove beach goers a chance to swim, without having to contend with a difficult entry into the sea via the beach itself. I note the expense is around 10m for each pool option. Surely a cheaper, and more effective option would be to construct a small pier/walkway(floating or fixed) into the sea with a floating pontoon that would enable those who wish to swim have an easy entry into the sea itself. I have no knowledge of sea currents, rips etc that would make swimming off the beach unsafe, however I note that currently there are people who make the effort to enter the sea off the beach and swim. Any sized pool during a hot summer day would attract a large number of people from the local catchment area with its attendant parking problems, whereas a beach swim would be less attractive due to the stony beach
I am originally from Sydney and moved to Hallett Cove 3 years ago. Seaside pools are almost at every beach there and part of the beach culture and community. It would make a huge difference and bring positive benefit for people in the surrounding suburbs who don't like swimming in open ocean due to safety, e.g waves, currents, sharks and will get more kids in the water and build their confidence. It will also benefit the elderly or disabled and everyone in general due to the health aspects of swimming in unchlorinaded water
No
Build it properly, font do it half assed (25m pool)
I am thrilled for the opportunity to see hallett Cove develop . Thank you Marion City council
Hallett Cove is a natural beauty, having the one and only seaside pool is a draw card for tourism and the local community will be able to swim without carving up their feet to get wet. It will open small businesses such as more eateries etc. It will promote Hallett Cove, a seaside pool has a lot of positive spin offs.
Without being defeatist, if the proposal goes ahead, it it likely to be built in the next 20 years ? I have been in Hallett Cove for 30 years, & when we moved here, there was talk of the Marion golf club being upgraded & turned into 18 holes. Well, Still waiting.
Need to make sure parking is looked at. But I think that was flagged in the initial scoping.
If you are going to spend money on it, you may as well turn it into something that will provide both health and recreational benefits as well as have a positive impact on house values in the area.
Modify the 50m pool to include a few 25m lanes (say 2)
bit concerned size & location of changing rooms,lack of parking as it can be imagined how many visitors.
This would be a wonderful asset for Hallett Cove and make the beach much more usable.
y

A sea side pool at hallett cove beach will bring more people into the area. Hallett cove will be the place to be. I strongly agree with the sea pool
y
I would suggest that the cost of maintaining the boardwalk be prioritised over the potential establishment and maintenance of a pool.
None
Happy for either option 1 or 2 . A sea pool would be a fantastic attraction for the Hallett Cove beach considering it is not a suitable swimming beach due to the rocks .
Love project 1 - 50 m pool Can't wait for it
We need it
I like Option 1. I am not concerned about parking issues as visitors can park at the train station, esp on weekends there are plenty of parks and the bus goes there
Curious about parking. Is the parking sufficient?
I think the seaside pool will be a fantastic development for the suburb, southern area for individuals, families and businesses. The challenges that maybe encountered in such will be able to be navigated and adapted to.
I am really excited about this concept. Thank you David for fighting for this and all of your support and hard work! Hallett Cove is so close to home and very picturesque, lovely boardwalk but how amazing to be able to swim there 😊
no
Nope.
Parking ,noise, antisocial behaviour, and if the pool will restricted after hours
Surely we are building a.number of olympic standard swimming pools and have one of the greatest shorelines in the world why do we need.to waste money on items like this which only benefit a small number of rate payers and lots of outsiders when people are being fined because they cant pay their rates?
Get it done. Enough talking
I hope it goes ahead as it will really add to the areas development and increase use of the beach. More carpark space would be needed due to popularity especially during warmer months
What parking options are considered?
Please do not use steps in pool as many older folks cannot use them, a graded walk-in ramp would be ideal
I'd love to see this happen. It'll be super good for Hallett cove and it'll bring in tourism.
No
Hallett Cove beach is nice to look at but unused as too rocky and unsafe to swim currently. A pool would be unique in our part of SA and would enhance the area and encourage visitors to explore.
Hallett Cove beach is not the best and having an outdoor pool will entice more people to this area
Hurry up with it :)
No
Please don't waste ratepayers money. Marion council area already has a pool for those that wish to swim.
no
in relation to some citizens talking about lack of parking, a lot of the citizens in the area primarily walk to the foreshore and therefore do not need extra parking. additionally the parking need is not a consistent need as per all other costal areas where parking is mostly ample excluding some high

heat days in summer.. i do not see a need to create more car parks, at most perhaps optimising the parking..
Nope. Let do the pool!!
Are there suitable changing rooms, parking space for ice cream van ,food truck, I believe I saw cordon steel fencing, think stainless will be better. I think on a warm summer evenings it would be stunning.i also think it would draw a lot of people in. Great facilities for teenagers. I don't believe the traffic survey of 2.5 people per vehicle, think there would be an aged contingent. The grassy bank does not get used, put a one way road with parking under the ones that there.i think it would become a very popular place. Hallett cove boardwalk has imo. More than doubled the walkers since COVID.
No
Parking will also become a major issue in peak times
Would be great to make hallett cove beach a place where you could actually swim
As well as serving the local community, has the potential to be an enormous drawcard for tourists as is the case with the ocean pools in the Eastern states.
Please get bipartisan sipport for this project!
Please ensure whatever option that adequate car parking and traffic flow is provided.
Just stop talking about it and start building it!
Only strongly advise of a pool fence around the pool and the wade pool as its a safety hazard not to include which overrides the look of the pool.
See comments
Has car parking been given any consideration? There is little parking available now for users of the boardwalk and Boat Shed cafe.
Just do it :-)
Thank you for all your work. I hope this project goes ahead.
Appreciate the effort and transparency.
Sydney has many tidal pools and they are working well. SA should follow their lead and install many more.
Save money and spend on hospitals and mental health. This would assist so many more people than just an outdoor sea pool.
Be good to have another coffee shop besides the boat shed :-)
I have lived in Sydney where these pools are common and they have been so well used and create a healthy culture for those who are not into surf swimming or surfing. It will make the water more accessible to children, mothers and adults who are less able.
While Adelaide beaches are beautiful and nice to swim at, there is the constant fear of sharks. A seawater pool is a fantastic safe clean place to swim flushed out by the tide. I have wondered for a long time why Adelaide hasn't a seawater pool which provides total safety for swimmers. It will be a great asset. I thoroughly endorse option 1 the 50m pool.
Concerned that the tide is strong enough to keep clean, and how far out into the see will the pool have to be to work with the tide.
Go ahead with a pool
Massive positive for the area
When previously examined, I was president of the then Hallett Cove SLSC. i experienced the "support" and the eventual rejection by Council on the basis that SLSC's "failure" to guarantee 24/7 lifesaving support and physical presence made the concept unacceptable.
NONE

Think BIG!... build it and they will come!
None
I wish the pool could be much bigger then the designed
No
I would really like to see small lockers for valuables be considered in the final design
None
Capacity of nearby car park will likely not be sufficient to cater for growth. May be worth considering more frequent public transport options (dedicated shuttle bus from train station).
The original concept was brilliant. Every other option is no option. Looks like the original option will not be funded. Please don't waste any money on any other option. A real shame. This could have been quite special !!!!
Option 1 is my preferred but realistically option 2 would probably be the best.
I lived near ocean baths growing up. It would be good to have diving blocks so people can swim laps.
I think it would be very beneficial for the community
Let's get option 1 going ASAP
Yes. The pool is going to be there for many many years, so build the best ie the 50m option.
The Council cannot afford options 1&2. They will not generate income and will adversely change the environmental coastline. If the Council want State or Federal income support, money would be better spent on properly repairing the potholes on the major roads.
Just hoping that some parking could be sorted
Concern about parking
No
Lets not make the same mistakes as the one way highway to save a few dollars which in the end ended up costing more.
No-one is going to use a pool at the beach. The very idea is a waste of time and money that could be better spent on important issues. People don't come to Hallett Cove to go swimming. Seawater in South Australia as a whole is too cold for about 95% of the year to even dip your toe in. As a local resident, I like the fact that Hallett Cove is not a yuppie tourist suburb like Brighton, Seacliff or Glenelg. I want it to stay that way. Even the BoatShed Cafe is too yuppie for my liking - I would rather have a decent restaurant or two at the shopping centre (I'm sorry but the tavern doesn't count and neither will the new Cafe Brunelli).
I figure if it has to be done it's best to do the best possible. For the ushers and the environment
parking will be à problem, I would like to see the 683 bus used as a shuttle from Hallett Cove Beach with parking available on the eastern side of the station and the 683 bus continue on a new route to Hallett Cove SC to encourage more people to use public transport rather than clogging up the local residential streets
Have varying depths, lanes even and have it look like an infinity pool. Consult first nations people about this and have a connection to it
This will be a major attraction for the area and state. This will be a feature for all walks of life and generations of the future.
Parking improvement

No, just do it
Time to start construction please.
Before moving to Hallett Cove 18 months ago I lived in Burnside and had the benefit of regularly enjoying the tremendously popular council swimming pool facility there. I strongly recommend option one as a good alternative that will prove very popular to both residents and visitors alike.
Please look at making Hallett Cove beach more useable instead, clear rocks, move sand and have life saving. This pool will end up unused and an eyesaw on the coast. There is no change facilities, extra parking, these all need to be established first. Work more on the hill and amphitheatre already built. We don't need a pool.
I believe there is an overwhelming response from most of the residents in Hallett Cove and surrounding suburbs to put in a pool, we have been waiting a long time with many consultations and now youre bringing in a "no pool" option, this is frustrating. i understand the residents on the foreshore have strong concerns from a parking perspective and it will "disrupt" their peaceful living but that is a selfish attitude the beach is for everyone. The fact that it is an unusable beach because of the sand dredging for port stanvac is more of an environmental debacle. Now council have an opportunity to save the beach and put in a usable swimming space and you still procrastinate. Just do it!!
This could be a transformative public space for the community
I think it's a fantastic idea and as a local homeowner it will boost the value of mine and other local properties on addition to my other comments. so I see it all as a win.
Please build the pool!
No
Can't wait for this to be finalise & finished. Such an awesome idea
Nearest community swimming pool is an indoor pool at Marion a 15 minute drive away (if you can get a park)
This beach is relatively unique among Adelaide's beaches. I don't agree with trying to 'commercialise' it. The area has also been likened to ANZAC Cove and adding a pool would detract from the likeness
Please put a pool at hallett cove
Where are you planning to park cars, it is already impossible to park
I would like to see it done and all this Unnecessary Political $Cost / Waste be stopped. Lets build the Asset, not this mindless Bureaucratic, Public Service, Costly, Song and Dance Show. It should be about the Asset (Pool) not the Bureaucrats, Public Servant, Public Purse Parasites.
Disability access, seating for low mobility users around the area, parking
Get on with it
I would prefer money be spent on a noise barrier wall adjacent to Lonsdale Road. This would benefit far more residents than a swimming pool for "millionaire row". There is huge community support for a noise barrier wall. Hundreds of letters have been sent to DIT and Hon. Tom Koutsantonis MP.
Hallett Cove is a fast growing area however let's not get carried, ending up with piles of abandoned junk all because careful planning was not followed
This is one of the most beneficial projects Hallet Cove has had on offer for decades and would honestly be incredibly disappointing if this was to not go ahead.
Great initiative. Looking forward to this progressing further.
Do it now. It will enhance retail opportunities and benefit local residents and their property values.
It would be fantastic.
In the overall cost the 50m pool is only a small percentage more of the cost to build and will be able to accommodate a lot more people. It would be terrible to look back and regret building only the shorter length pool.

This is a fantastic idea, think it will be a very worthwhile investment for our community
please start the process and build the 50-meter pool. Thanks
No
No
no
Our whole family is very excited at the prospect of this project going ahead and how it will benefit our community.
I am REALLY looking forward to the possibility that this gets off the ground
Let's do this for the community, aquatic people, for the young and old. For SA. Yes we can!
I think together with the conservation park, playground and Anzac Day location, a unique pool would really make Hallett cove beach a wonderful place to visit
Parking/accessibility is already an issue down there so this would be a priority. Car park/shuttle service or something may need to be considered. Safety - lifeguards? Dry area/likely to attract unsociable behavior? Otherwise, brilliant idea. Would be fantastic for the area. Such a beautiful beach, but not being a swimming beach the pool would transform the area
Great initiative for a unusable beach for swimming
The pools feel at odds with the environmental significance of the area.
Adelaide is completely lacking any sea water swimming pools since the demolition of Henley Pool
Parking is already a problem at HC Beach. I don't see any feasible options to expand the parking facilities, without cutting into the grass hill.
Keep up the good developments you continue to do in our council area. Use a few more native plants in our parks to attract birds & bees. They handle the dry conditions best. We think you are doing a great job. Thanks.
No , thanks
The 50m Pool would be the best outcome
Hurry up and build it.
No
Nil
Exciting times I still have concerns about parking (summer), and I expect the local area residents would agree!
Shade areas, parking, disability access
Move it forward for funding. Save seining for all!!
no
There is a need to ensure an ongoing balance between recreational use of the area and the preservation and protection of the natural environment and wildlife. In particular, the Field River outlet is an important roosting and feeding site and has also been a breeding site for Hooded Plovers, which are classified as a vulnerable species
My only concerns are the lack of parking or public transport
the area is of great natural beauty and conservation importance. Further impact by construction is a great risk to this. The scar from rock removal below the water line for the old surf club is still very evident and evidence that person made impact lasts a long time despite best intentions.
Decide..get funding and do it by end of 2024. In time for summer. Be careful about using consultants and wasting money. Marion Council has a great asset in the coastal walk and future pool. So make sure you promote it and look after them.
Please spend our money on better projects than a sea side pool

The area is screaming out for this pool and it will be a wonderful addition to the area, a facility I will certainly be using, well me and the family.
Please consider the long term advantages in the pool while taking onboard the opinions of an aging community.
These pools will provide more user friendly options all year round. Lap swimming pool and wading pool allowing more room for freedom of movement
Please let us enjoy our very special beach without wrecking it.
Just make sure there is adequate parking to make sure local residents are not inconvenienced. Also configure traffic flow so as not to cause congestion.
love to still be alive to see the end result of completion on winning design.
The seaside pool would greatly enhance Hallett Cove as a suburb, but also as a community. I would use the pool once or twice a week.
The proposal for options 1 and 2 has limited appeal to majority of rate payers and will incur ongoing maintenance and staffing costs. Option 3 has the least impact and possibly many benefits.
Please consider parking and infrastructure and the impact on local residents as this is guaranteed to become a tourist spot. It is extremely difficult for local residents to find parking for beach access in peak season as the boat shed cafe is extremely popular and car parks are filled quickly. Possible solution of a shuttle bus from the shopping centre and/or Hallett Cove Railway station in peak season and school holidays in summer. Please consider accessibility requirements, disability access and parking, amenities such as toilet/shower facilities and changerooms.
'- How much will this cost the rate payers? - How easily could the site be restored to its natural state in the future? Is it making irreparable environmental damages? - Will there be an entrance fee? - Will this be open 24x7x365 days per year? - Will it be fully fenced for safety? - Will there be showers? - Has dealing with misbehaviour been considered? - Why should this receive federal funding ahead of other important non-recreational projects? - The benefit-cost ratio would appear to be low.
Parking could be an issue, but that shouldn't stop progress and development
This is a small, unique and natural cove, that has dished up artefacts from Kaurna and other peoples over 11000 years old, already messed with for decades, with development on dunes that otherwise would have replenished the beach naturally, and then further paving and landscaping the foreshore. It is adjacent a world renowned geological site and supports diverse sealife and ecosystems in its rock pools and waters. Attracting hoards could disturb these assets and cause traffic chaos. It won't be tidal filled so you are signing up ratepayers to decades of maintenance costs that few will actually benefit from, being at the extreme limits of the Marion boundary. It will become a white elephant for the same reason our outdoor pool at Park Holme is closed in winter - nobody will use it when the usual winds of Hallett Cove are blowing on a 10-15C day. Like anything else, the novelty will soon wear of when they realise it's not heated! Please don't spoil our natural asset.
Option 1 would be a great asset to the area and would be well used by my family.
Please leave the beach how nature made it Too many beaches have been affected by development and the beaches have suffered ~ eg Glenelg Once it is changed we can never go back I feel it is money that will be miss spent when other venues and facilities in the Marion council need attention and are not maintained. There are many other places for swimmers in summer and I truly feel it is selfish of people to want to change something that is beautiful. It will be changes forever no going back

Do it once and do it right ! Is the message
An all cover tunnel waterside to ho into the pool or a big shade over part of the seaside pool would be fantastic for protection from the harsh sun in summer!
Hope you get the funding
I have already provided feedback a couple of days ago but since then looked a little more in-depth at the Coastal Engineering design considerations. Were there any considerations taken to account for the change of datum with the introduction of AusGeoid2020 in 2017? (see https://www.ga.gov.au/scientific-topics/positioning-navigation/geodesy/ahdgm/differences). The tidal data mentioned on page 12 of the report seems to predate the change.
Can't see if there are also stairs, in addition to the ramp for access, closer to the Kids pool. This would be beneficial if not already planned.
Just get started we need it badly
Consider parking, infrastructure, how people will use the pool, safety
Just that a seaside pool would be a great addition to the Hallett Cove Community, that currently has to travel a 15 kms round trip to have a swim at a family friendly and swimable beach, even those Hallett Cove is a coastal/seaside suburb. The sea is there, let's construct a pool so the community can take advantage of its coastal location. Could be no better use for rate payers funds (after maintaining roads and collecting garbage!)
A swimming pool is more cheaply and easily constructed on land and can even be heated. It is absurd to destroy a natural beach by concreting it. It is the type of development that belonged in the 1950s, before people put any value on nature or the environment.
It would be great for Hallett Cove, there is nowhere to swim from Seacliff to Christies beach, this is in the middle and would get a lot of use.
This could increase our council rates. Money could be spent on other things. Pool probably will be only used a few months of the year.
Leave Nature alone. There is not enough parking to have lots of people going there and too hilly. Better to spend the money on something that would help the people in the community like an indoor therapy pool which we all will need as we age.
'The committee should look at improvement to the following areas if seaside pool is to be built - improving traffic flow along residential roads - increase additional car park spaces (at least additional 100-200 parking bays). The pool will not draw additional 20 -30 families from other suburbs to Hallett Cove. It will be a tourist attraction and draw crowds from all suburbs and interstate - additional toilet, shower and changing room facilities
yes if we have a pool there need to be more toilets / changing area to be taken into
Respectfully -Hurry up!
This is a fantastic project and I can't wait to see it completed so we can all enjoy it! Locals and visitors
Parking and extra amenities (toilets) will be required. Hallett Cove Beach is already becoming quite popular.
No
Having a seaside pool will not only be beneficial for Hallett Cove but all of the surrounding areas and beyond. Adelaide needs a safe place for swimming given the sharks attacks over recent years.
Get the job done asap
Use our hard earned tax money more wisely
as a resident who tries to get to the foreshore the glaring lack of parking is a trun-off, and that's BEFORE this thing that will be popular is built.
Pool will invade our privacy, street will be too busy with many cars parking and noisy and ongoing kaintenance

Bring life to Hallett Cove beach
Great idea overall, good luck!
The parking assessment seems incorrect. The parking available along Heron is full most peak times, there is not vacant spaces.
Access to pool could potentially be charged similar to getting a car parking ticket
It will contribute to keeping people healthy and fit thereby saving money spent from the health budget. There will need to be a plan regarding the extra parking. There definitely needs to be more toilet facilities available.
The whole area is already too busy with visitors, often crowded and there is not room to expand and keep the character and geology of the area. If you must build a pool, put it elsewhere in Hallett Cove. Save your money and save us rate increases!
Don't ruin the area
I think a seaside pool would just add even more appeal to beautiful Hallett Cove. I love living here.
No, comments included in responses above
Whenever we are in Sydney we swim in the Malabar Sea pool maintained by Randwick Council. It has been there since the late 1800's. Many older and disabled people go every day. There are no extra amenities other than a rubbish bin and a 4 shower head stand to rinse off + a few metal hooks in the rock face to hang belongings....always in great demand on a high tide day with the Tasman Sea raging in all its glory. Our family call it the "Cocoon"pool (reference the movie of the same name.) Cold salt water swimming is popular all over the world and is said to be a tonic for many ailments. " If you build it they will come". We can't wait! 🏊🏊🏊🏊🏊🏊
Car parking is a night mare at the cafe and beach. Building a pool will only make the parking and beach access worse.
Just start working on it, everything takes so long with the council, I'm 65 and would love to see my grandchildren enjoy a pool. Please
Please consider the small amount more of a better attraction of a 50m pool over a 25m
Nothing to add sorry
Parking is a massive issue. The train station is uphill.
Please build the pool.
Go for it, i grew up in Edithburgh and the pool there was great. It was expanded to 25m while we lived there which was a huge cost. Do the 50m one now to avoid having to expand it later!
Has a cost benefit analysis been undertaken? What are next steps & costs. Who will pay for construction, ongoing ops & maintenance?
The hallett cove space is beautiful and is becoming increasingly popular, the addition of a pool would maximise and differentiate ways the area is used - it would be crucial that parking issues are rectified. Currently the beautiful tiered/ grassed space while green doesn't provide much else, community markets, weekend and summer options would be of benefit in this space and/or addition of small shaded picnic structures for general use. While parking is an issue, it would be a shame for all of the green space to become parking.
As this project is encouraging people to swim, it makes sense first to heat the Marion outdoor pool and provide 'learn to swim' vouchers for all those SA families who cannot afford to teach their children to swim.
This is a great idea that needs to be followed through. It will also be hugely popular and add huge value to surrounding residents and property.
Hope this gets done, would be fantastic to have in SA, love them in other states.
NA

Nearby toilet facilities will need to be expanded. I believe that shade options will need to be made available at the poolside.
I've been to a sea pool in NSW and it was so nice
This will appear on tourism ads if it goes ahead and will certainly catch attention
Help make Hallett cove a destination to go too.
Hallett Cove Beach is a residential beach. A pool as is being proposed is a nice idea, but more suitable for an area with businesses to service the summer crowds such as one of the "Jetty Road" precincts further North. Prefer if you just leave the area alone. This is not a NIMBY perspective - this beach just isn't a suitable spot for this type of development.
Once again, this could be such an outstanding addition to the local area and we need some vision. Hallett Cove is such an underrated and under resourced location. It is stunning! Lets do something fantastic for the local area. And again, don't do the usual South Australian half arsed project that doesn't cater to the requirements of today let alone what will be required in 5, 10 or 50 years time, and just needs to be expanded later on. Lets do this!!!
Please consider the parking situation. If no changes are made to parking its going to be extremely fustrating. And im not sure how extra parks can be added without taking out grass/nature.
If you're going to do it. Just do it properly
Please let's make this beach usable for residents and those from surrounding suburbs. Make hallett cove a destination it is so beautiful, cafe is being redeveloped, shopping centre also lets continue this positive run! At the moment beach is useless with all the rocks, give us a place to gather and swim.
It would be a terrible shame to spoil the unique natural beauty of Hallett Cove Beach. There is ample swimming and snorkeling opportunity at beaches to the north and south which are accessible via public transport and by road. Hallett Cove Beach is a special area, in that it is relatively unspoilt and uncommercialised, with views that are far superior to any other beaches in the area because of this. It also has great geological significance. Let's not take away its unique selling point for tourists and residents alike, by building a lump of concrete and putting a load of pumping equipment right in the middle of the beach. Not to mention the increased human footprint that will invade the natural habitat of our native wildlife.
It would be such a wonderful asset to the area (and to the state!) to create this seaside pool. I'm excited to see if it goes ahead.
I think it would good for the area, we could maybe have a swimming club in Hallett Cove at the moment we have to go to Marion or Noarlunga.
Please proceed it would be a great asset to our area
Leave the foreshore alone or put in a reasonable boat ramp for small craft.
y
What measures are put in place for nighttime, youths hanging out in the area, glass, their own safety? Management of water freshness / cleanliness/ filtering. Management / contamination of waste water flow. Damage to the coast. Management of increased population activity
As a long-time Hallett Cove resident, it makes me feel sick to think that some idiotic short sighted politicians want to mess with the coastline in this most unique and beautiful location. If Hallett Cove needs a pool, don't put it in the coastline. Show some care and learn from past mistakes in interfering with coastal processes.

Leave Hallett Cove beach alone. Do not proceed with a pool.
Would love to see a pool down there
There is insufficient parking in the area to have a sea side pool.
Lets do this! 👍
Yes. Please select either option 1 or 2. Finances permitting, option 1 would be the ideal with plenty of room for serious swimmers/large amounts of people. Option 2 provides a decent area of swimming and fun, whilst option 3 provides nothing leisurely for the community at all. Sydney has sea pools/sea side pools...why can't we? If we miss this opportunity it may be years before it's able to be considered again! Think of the extra people who will visit the area and use the facilities! What a coup for Hallett Cove and The City of Marion!
1 Do it once and do it correctly. 2 Again, do it once and do it correctly. 3 Dont forget to install rinse off showers. 4 Parking is not an issue, the water is cold even in summer and if it's a busy day, people will simply park further away or come back later as they do when visiting pools in Sydney.
The council have done a terrible job of looking at this from an environmental point of view. This is very clearly for a group of loud voices that wished they lived in Bondi. We should be proud of the coastline that we have for is unique beauty but the council is not supportive of enjoying our area for what it is.
I am skeptical about claims of parking requirements being met by the designs - often quite difficult to find a park there on summer weekends now, without the attraction of a pool.
Just that we applaud the Council and those involved with project for keeping it alive as an idea and all the work put into it. So hope option 1 or 2 are proceeded with. Great for community well being and making Hallett Cove and surrounding suburbs even greater suburbs to live in
A lack of historic and local knowledge is apparent. It will reflect very poorly on COM. Geologist from around the world visit the area near destruction.
No
What an awesome development to put Hallett Cove on the Map!
To consider a 25m option seems somewhat short sighted given the relatively minor extra cost to construct and maintain a larger 50m option which will afford a greater number of users to benefit from the structure. The larger pool also appears visually more in tune with the location, being parallel to the shoreline.
We need lawns, trees/shade, water, kiosk, toilets
Make a 50m pool
Huge waste of money This unique and fragile environment has already been over developed ... no more is required
Option 1 is the best , option 2 ok and option 3 waste of time
Small changing booths might be worth thinking about Toilet facilities need to be adequate Will it impact rates
Will be wonderful to have somewhere safe and free to swim. Hope it will also be dog friendly
An independent environmental assessments is needed. And confirmation of ongoing monitoring of the changes in bio-diversity as a result of the pool.
For the maintenance cost is seems crazy not to go with the 50m pool so it can be sectioned off for community led activities eg. aquarobics, swimming lessons/competitions etc

Great idea but as a local resident who frequently uses the cafe, boardwalk and beach I'm worried about parking. It will be important to advertise easy access from Hallett Cove Beach station and buses as part of managing impact of number of people.
It will be great, go with it
Just like to add that we are returning to a culture that stays safe looking at the ocean, all over the world seaside pools have increased participation in water activities at a family and community level. Let's get people off the grass and into the water!!
Hallett cove beach is nice beach to walk and think reflect about life there is plenty of other options there for people to jump in the water. the idea looks appealing but it will make the area an attraction for the wrong type of people, I won't use the pool my self or anyone in the family. If we want to jump in a pool there is already many other options. But it will eliminate the option we have now with the serenity of the place
Go and do it!
Having a good sized, environmentally friendly seaside pool would close the gap in the provision of such a community amenity. The alterative is for residents to keep installing individual pools in their properties. This is far less environmentally friendly as more pools which are installed on house blocks would use more water, power, and chemicals etc.
Pls also enhance the beautiful rock pools at our beach, it's so unique and fun to our area
No
Don't do it
there does not appear to be any pool sports specialist on the committee unless they are been consulted separately eg canoeing at Adelaide aquatic pool life-saving at royal or surf life-saving, triathlons. build it to get maximum participation by the making one end slightly deeper
After speaking with Kris Hanna (Lord Mayor) recently he expressed the fact that Ian Crosslands (which other councilors are in favor that DO NOT live in the area?) is in complete favor of the pool, it is obvious that he does not have the traffic concerns in his street in the headlands, speeding idiots up and down Grand Central Avenue is a problem NOW. If this pool project goes ahead the traffic in Grand Central Avue will be even worse. WE have been in Grand Central Avenue for 42 years, members of the council have done nothing about restricting the traffic speed on our street (Sarah Luscombe), speed humps the same as the ones on Sandison Road need to be installed. There is nowhere to park in the foreshore area most of the year, there was talk of a "shuttle bus" from the Hallett Cove Beach Railway Station. Who came up with this ridiculous idea? The train station carparks are FULL 24/7, plus who is paying for the bus? The ratepayers! Council members like Ian Crosslands need to spend some time looking at the "big picture" and spend some time also speaking to the residents on Grand Central Avenue, I know of many that I have spoken to in the area of Grand Central Avenue and Columbia Crescent that are fed up with the Hoons and the speeding traffic, we were nearly "cleaned up" once when trying to reverse our caravan into our driveway. We are NOT anti-development but this whole idea is costing millions and the upkeep and Maintenace each year is abhorrent. The next thing will be a rate increase to pay for it! Just a question - do councilor's pay the same council rates on their properties the same as us? I will be interested to hear from Ian and other council members who are all for the pool and try to explain to me why we as ratepayer's should agree to millions to be spent on something that will only be used at best six (6) months of the year.
I'm pleased to see the council continuing to progress this unique initiative which will undoubtedly lift the profile of Marion council and Hallett Cove landscape and surrounds. I would just ask that development continue to proceed at a good pace, or else risk budget blow outs by increased costs due to inflationary pressures as times goes on. I would also like to see residents receive either a entry

rebate (ie discounted), free use, or a pass of some free use entries, since in the main our rates will be contributing to the maintenance and upkeep of supporting infrastructure.
Would like to know the cost to make an informed view
No
This pool concept will be good for the south. Pools should be considered for other beaches along the coast. It will be great for tourism in SA
Please make it happen!
I think the beach would be spoiled by such an imposing structure.
50 m pool would encourage use for competitions by swimming clubs and surf lifesaving SA. This use would encourage their participation in supplying pool safety guards during peak periods
I believe you can't underestimate the value to health, safety and well being. Mental health is a national tragedy. Financial pressures are at an all time high, a pool would allow parents to teach their child to swim, in a safe environment.
Without a fence what stops people throwing glass in the pool, swimming at 3 in the morning drunk
Thank you
There will certainly be an issue regarding parking. Already the parking spaces around the beach and surrounding roads are full each day (even in winter). I consider this to be the main problem regarding the plan to install a swimming pool. Will there be a lifeguard on duty? Will there be disability facilities - for changing and access into/out the pool? I am also concerned about the risk of any potential environmental impact the installation. It is a beautiful natural beach - I consider enbankment protection to be important for safety and also to maintain the natural fauna that lives there. I think more detailed feedback should be sought from the local community. The previous survey was too vague and the response rate was very poor.
Thanks for including the community for consultation
concerned about the projects overall cost to the community - associated with the intial set up and long term maitenance as well as the lack of parking. As a local i have seen this area become more popular and parking is already an issue within the area.
A pool will destroy what is left of H.C beach's natural environment and be an economic folly.
I was initially very supportive of the idea of constructing a sea pool. However, given that Hallett Cove Beach was found to be an unsuitable location for a sea pool such as those found interstate, I do not believe the proposed seaside pool is appropriate for the site. I am also concerned about the ongoing costs associated with such a project in relation to the community benefit.
This would set Hallett Cove apart from other coastal suburbs, it's close to train station
Thought will have to be given to extra parking or provide a shuttle bus from HCove Beach Station on weekends when the car park has a reasonable number of spaces.
Consider how much it will cost the city of Marion residents, the impact it will have on the area, the geological site it will destroy, the relocation of the stormwater
Thank you for allowing us this survey to participate and hopefully others have more reasoning behind their decision on this and to not pick the cool pool option they won't even end up using. The pool option would end up filled with bird poop and dead animals as they would try to find a way into there, only to die by the chlorine (or similar), and it would mean less relative living space for the cute baby crabs we are privileged to see.
No
As an idea one could have occasional reserved spaces for food trucks. I think it could be a nice option to have different options of food or coffee near the pool.

Hallett Cove beach is suitable for swimming and snorkeling, and will regain its underwater life if all storm-water is treated adequately before being discharged into the sea. This is where Council funds need to be spent, not on polluting a beautiful beach with any sort of concrete monstrosity. It is better to prevent further climate change, rather than attempting to mitigate its effects.
I reiterate my strong opposition to the construction of a seaside pool at Hallett Cove Beach. The reasons for my opposition are many and varied, and outlined in my responses to the questions relating to concerns about the two pool options. While I commend Council for fulfilling its role of exploring and properly considering projects that may be of benefit to our community, in my view, the construction of a pool at Hallett Cove Beach would not be a good outcome for our city. I am a firm supporter of the City of Marion, the exemplary work it performs and the indispensable services it provides. However, I would be bitterly disappointed if Council were to progress this project to construction.
When I purchased my block of land at the Hallett Cove many, many years ago I was looking forward to quiet and affordable living by the see I can only hope it's going to stay that way in the year's ahead.
Not currently
Is this pool concept fenced? 24/7 access? Life guard - we saw in NZ recently a local volunteer on duty during opening hours who also did basic maintenance? Suggest open only 6 months of the year - Sept to Feb. If funds are short consider a "go fund me page" - $5 or more. We want and need this pool. Thanks.
Lighting was mentioned, I'm not sure if this was to be located at the pool/beach. If so this may have additional environmental impacts to wildlife life insects, local kestrels and bats. Lighting should be sensor based, switched off at night or not included at all. I am wary of large developments in natural areas. Adelaide already has many lovely swimming beaches. I understand coastal protection is needed, but would prefer to see this done in a low impact way.
Which ever option succeeds disability access is very important to our family.
If option 1 happens to be the most popular option, I would strongly suggest the area needs ample additional parking and better public transport options, to cope with a significant increase in a number of visitors to the Hallett Cove Beach. Without it, it would create a nuisance to residential streets in the area. I also think the estimate costs needs to be very accurate. As a ratepayer, I don't want additional financial burden to build and maintain the pool, to already hefty council rates. If this is likely to lead to that path, I'd rather choose Option 3.
We owe it to the environment to keep it as natural and beautiful as possible and by including a beach pool it's disrupting what we enjoy as a community and residents who live nearby. It will disturb the natural ecosystem in the area no matter the size. The cement structure will be an eyesore and waste money that could be going to helping the community on more important needs. The streets will be full of cars where they shouldn't be parking near people's houses.
In our opinion, if the final option is to not approve and build a 50 m seaside pool and embankment protection at Hallett Cove beach, then don't do anything. Building a 25 m seaside pool is too small and not cost effective for the outcome, e.g. one way freeway. There is already embankment protection in place and if this was such a concern then this should have already been addressed by Council.
None
With upgrade to boat shed cafe, there need to be more then a few extra car parks
Just to implore concerns around lack of car parking which is already a massive issue.
Car parking is a massive concern - the council has underestimated the number of people that frequent Hallett Cove Beach.

Please consider long term benefits for HCove community of quite 50m pool and foreshore protection
Other priorities should take precedent like completing thre coastal path. Requiring pumps for options 1 and 2 will have significant operational costs. Unless this can be powered by renewable energy, this will have implications for taxpayers and budgets.
We repeat, the estimated costs of the pools is unwarranted. The money could be more beneficially spent on more needed works. Many of the roads and footpaths in Hallett Cove are currently in need of attention.
I feel you've addressed the parking issue. I know this stresses people a bit. But feel once the initial wow factor has passed by. The extra parking spaces will be sufficient. I would walk down the hill and it's 600m from my place.
The foreshore doesn't have the infrastructure to support more people , Summer parking and the traffic is already an ongoing issue for residents . Keep the beach free from concrete . Pools don't belong there . We have plenty of pools indoor and outdoor . One is definitely not necessary at Hallett Cove Beach.
Please do not damage the most beautiful beach in Adelaide. The significance of the geological site is much more important than a short term gains of having a beachside pool for a small number of people
I think that it isn't necessary for people to have an impact everywhere. Hallett Cove Beach's geological significance is very important and there is no need to place a pool there. There has already been a lot of work and funds put into the area. I think we should leave it as it is and use the funds for another purpose that will provide a benefit to more people.
Why build a seaside pool with rising seawaters....
In the early 1970's Jean Minards, a mum visiting with her sons, stood in front of a bulldozer, at the beach, in order to stop the destruction of the Hallett Cove Amphitheatre. At that point already half had already been imploded. After a national campaign by scientists & teachers, The battle was won and in 1976 the Hallett Cove Conservation Park was declared. The Important geology of what remains of the Park begins exactly where the pool is proposed to go. Ask the Friends of Hallett Cove for a tour sometime, its fascinating
Before proceeding a cost benefit analysis needs to be prepared. This needs to outline the costs (both initial and ongoing) and the benefits of the project, including an analysis of the users, and where they will come from, and the overall benefit to the majority of rate payers. Lower council rates are preferred to (another!) high cost project that doesn't benefit the majority of rate payers. Any councillors who live in Hallett Cove or own investment properties need to disclose this publicly to avoid any conflicts of interest.
Residents in Hallett Cove have wanted and been promised a tidal pool for many years. The pool would be welcome on a beach that is otherwise not suitable for swimming. The foreshore has been upgraded with amenities, a coffee shop, boardwalk etc. and a tidal pool would further enhance the uses and enjoyment that visitors (and residents) would experience when visiting what is a particularly beautiful area.
Thanks for your work on this potential huge improvement to the area
Parking needs to be addressed and ratepayers need a guarantee that our rates will not rise in relation to maintaining the pool.
the cost between 1 and 2 is negligible in the grand scheme so if we are going ahead with this, let's do it right the first time!!
As per previous comments, I don't believe a seaside pool is necessary or required. The cost is significant to firstly build and then maintain for something that will only be used for around 3 x months of the year. The parking review has indicated mostly existing parks in the local residential area, and I don't think this would impress residents of the area, and they are also up steep hills.

There is no scope to add any more parking other than the few that were in the report. Visitors by train would also need to walk up and down steep hills to visit. The visual aspect is also not appealing to the area which is renowned for its natural environment and geological significance. This would ruin the current natural landscape which is what attracts people to the area. Whilst alot of people are all for a new pool I believe the novelty will wear off after a while. In addition there a surfers that use the point during stormy weather with the wave ending right where the pool is proposed.
We do not need another pool. This is a beautiful natural area. Please fight to preserve that. We do not need more people, cads and a pool.
Please continue to invest in family friendly items for our community.
I grew up in Hallett Cove and continue to visit the beach regularly with my two young children. Installing a pool is such a great initiative as we found that we couldn't use the beach as much as we would have liked to as kids because it's not great for swimming. I'm in favour of both pool options.
Don't listen to the greenies. Build it
I think water quality maintenance and regular cleaning will need to be at the forefront of the project—furthermore, considerations for amenities and the current Boatshed Cafe due to increased exposure and population.
We thank the Council for the opportunity to provide feedback on the proposals. We are longtime residents of Hallett Cove and have had association with the Hallett Cove beach for over sixty-five years. We do not support the construction of large conventional concrete seaside pools on the Hallett Cove beach. We do support the armoring of the embankment. The enormous financial cost proposed for a seaside pool would be better directed to the construction of a conventional pool well sited in the south of Marion Council with access to public transport and good parking for the community to use all year round. We strongly believe it is unreasonable and illogical to sacrifice the importance of the Cove's geologically significant coastal environment with its scenic beauty for a proposed concrete seaside pool development of this size and scale that does not share the unique and attractive qualities of the Hallett Cove foreshore.
If your going to do this it should be a 50 meter pool to make the most if the space and suit the residents of Hallett Cove and surrounding suburbs you did such a great job of the Anzac sight so let's make this one great too
I think this will be a positive outcome for our local area
This is a wonderful proposition for the Hallet cove and so rounding areas,I hope your condition on this project is based on the rate payers and not so called custodian of the lands !!
No.
Great idea
Please dont spare expense, make it as accessible as possible to all people - disabled included
Bigger the better
Any pool is great. If the larger size is $1.3m more might as well go for the largest size.
Parking in the train car park not approriate hilly walk to pool not suitable for mobility issues also takes up commuter parks

Council needs to do full costing of building and maintenance of option 1 and 2 and amenities needed
CAR PARKING! All spaces are taken even during the week
Marion councillors and mayor talk to everybody, listen to everybody. Dont be afriad to seek advice of experts spend our tax wisely.
Where will the ablutions/toilets be? Parking (exsisting) will be inadequate
Could be a 50mtr pool plus a smaller one
I lke the 50m pool but i dont have money to support the construction
Please don't do the popular thing. Do what is right for future generations.
Option 1 will create a tourist destination for Hallett Cove
No
No pool for Hallett Cove think about the environment
No pools!! Better build a shelter for homeless people, so they don't sleep in cars and tents right next to the Hallett Cove beach train station
No I think it is a great idea. I lived at Edithburgh as a child and I would go to their pool to swim after school
Hallett Cove beach is used a lot throughout the year. On a daily regular basis. Partly due to its natural beauty, geographical significance and history. The boatshed brings regular customers and people walking for well-being and fitness. I suspect man-made points will spoil that – excess traffic (including people traffic) that's not necessary or environmentally good. We have so many swimming options nearby beach and pool. Thankyou for reading and considering my thoughts and concerns. Have lived in the Hallett Cove area for 36 years. Have been a regular user of the beach and the conservation park and other walkways and parks. Have seen a lot of good improvements that are used and enjoyed by the public. I really think the pools are a step too far. Will spoil what is special about Hallett Cove. With so much nearby and so much already to do it is not necessary.

Appendix D – Social media summary

A social media campaign commenced at the opening of consultation on 14 July and concluded on 11 August. Seven posts were undertaken across Facebook, X (Twitter), and Instagram.

Facebook was the most popular platform that the community engaged with. Three posts were made throughout the consultation. Refer to the table below for a summary of the campaign and interactions with Facebook users.

Date	Theme	Engagement
Post 1 (14/07)	Consultation is open	119 likes / 256 comments
Post 2 (25/07)	Promote drop-in session	44 likes / 73 comments
Post 3 (10/08)	Consultation is closing soon	32 likes / 24 comments

Appendix E – Drop-in session verbatim feedback

Any other comments about a seaside pool at Hallett Cove?

- I live in Hallett Cove and love the 25m concept
- Parking needs thought as the existing area is full of cars during summer weekends
- Drilling for the seawater intake is best idea as environment impact is minimal
- Effluent from toilets/change rooms will require pump station
- Foreshore play and toilets already over used
- Question about the old metal pontoon from the refinery
- Esplanade residents will not want to look at the pool
- Why do we need the rocks/stones crushed? Leave them natural please
- Recycled rock not easy to walk on in this restricted area – use beach sand
- Sea walls designed to include features to encourage inter-tidal sea life
- Need to close pool when water quality is not good, eg storm run off – how will this be managed?
- Smaller pool is better without good extra car parking
- Concerns around energy and embodied carbon for pumping of concrete
- Will the site be returned to 'natural' at end of life of the pool?
- No need for a lump of concrete in the ocean – it is beautiful how it is a special place
- Love the ramp access to the beach
- Look at feedback results for Hallett Cove residents
- Concern children's pool is located in a spot where swimmers/kayakers and snorkelers currently access open water
- How much damage will be done to existing beach and environment during construction of this monstrosity
- Concern jellyfish and undesirables getting into building up in children's pool (stuck at high tide flow)
- Impacts of parking on local streets
- Need to move further south to along for existing ocean access to be maintained
- Parking problems, ecological damage etc etc etc
- What will the pool look like in 30 years? Ugly
- Outdoor showers only – no change room
- Spear fisherman (another bonkers idea) are allowed at Hallett Cove

- Like the idea of ramp access at the southern end of the beach (replacing the existing stairs)
- Concerns about intake and out take pipe works on sea floor – type and how? This is place
- Cement rectangles on the beach look like sewage ponds – they will fill with green algae
- Concerned with op and maintenance costs
- Don't want built concrete pool in natural environment just leave
- Concern impact on hooded plovers
- Hallett Cove is a geological wonder known worldwide – don't put cement on the beach
- Really concerned about traffic. Engineering seems fine
- Parking doesn't concern me – pool is good
- Concerned about parking – not enough currently
- Provision of AED near pool
- Large pool – needs more parking details before a decision on for or against
- Concerned about house values
- Concerned about amenity impact – I don't like it
- Concerned about safety/lifeguard cost
- 50m better for lap swimming
- Are there better beaches for a pool?
- Potential issues with people accessing pool at night time – causing noise and other troubles
- No quarry/rocks – you stuffed up Brighton
- Carparking is a concern it is already hard now – please consider – love the pool
- Marine Avenue and other surrounding streets already full in summer – more parking on Grand Central?
- Weekend train parking great. Weekday problematic commuters would be using the parking area
- One way along Weatherald Terrace? People racing through roundabouts
- Many other places to swim go there!
- Beach not suitable to swim at – definitely want poo!
- No indoor showers! Problems behind closed doors
- Parking in surrounding streets
- Can we get local public transport bus to run more often from/to train station? Particularly during day time
- Plan for loss of infrastructure and houses – 50-100 year plan
- Reserve parking for food trucks by grass area toilets

- Like pool option 1 aesthetically better – hugs the coastline
- Don't like the square shape
- Need an independent environmental impact assessment
- Would like to see a nature-based solution with hard solution to sea
- Like pool but not at Hallett Cove
- Level rise that is considered in pool design
- Has a 'fish' survey been undertaken to look at species which utilize the southern end of beach
- Manage erosion by allowing retreat of coast not building on beach
- No lap lanes – one pool for all. Not a good swimmer, cannot swim 25m or 50m (access pool only)
- Leave this beautiful area alone please
- Parking is an issue – if the pool goes ahead Option 1 is the most obvious
- More lap lanes please shade? Transport?
- Need to have an option to allow retreat of coast
- Where does waste water get pumped to? Bad for ocean swimmer
- Kids pool too deep one in Cairns is about 900m
- Parking? Where?
- Great swimming beaches already nearby and 2 pools in Council area
- Operational costs of maintenance especially electricity to run pumps
- Train carpark full 7 days
- Will use area more with pool as don't swim now close by
- Nothing should be done to disturb the local ecology! Strongly do not support any work done here!
- More pressing priorities!
- Go and swim at bright beach, it's lovely
- Great for bus services to go to Hallett Cove to access pool
- Like the pool but need to manage carparking
- Hoon car drivers would increase
- Build 50m pool and wading ASAP!
- There's a pool at Marion and Noarlunga – can swim/snorkel at Brighton/P.N.
- The pool looks so ugly -ruins HC!
- Don't spend rate payers dollars on pool – white elephant

- Put sand not reclaimed rocks on inside of large pool to make sandy family beach area
- Parking on local streets already cramped
- This is a beautiful swimmable beach
- Consult with the original custodians of the land please!
- Hallett Cove – a coast treasure – about time celebrated our incredible beach – 50m pool
- Why do we need a pool when we have plenty of great beaches nearby
- Would like half land/half free swim
- Parking?
- Move the playground and houses
- As a non-sea swimmer would welcome sea pool to swim in – feel safer and good for children as well
- Like Hallett Cove as it is now unique and adventure
- Love Option 1 – there are no outdoor pools in Adelaide in sea – would be amazing
- Love the concept and great for families. Also environmental and more family pools, individually built is less desirable
- Bigger convo about what will happen with climate increase
- Concern about ecological impact
- If we allow retreat how long until it happens and what impacts on Cove ecology
- Need erratic boulder area and material that can be lay/walked on comfortably – consider sand

What option do you support?

Option	Number of dots					Comments
	Strongly support	Support	Do not know / not sure	Do not support	Strongly do not support	
Option 1 50m seaside pool and embankment protection	35	10	2	1	12	• More rocks on beach side to give natural look • A pool is fantastic and what we need for the area • Have waited for this forever! About time showed off our coastline – great for SA • Have done great work on foreshore – the pool will be the cherry on the top • Don't support any further parking • 50m better than 25m as too small • So sad to ruin an amazing view and displace so much native flora and fauna/marine life • Pool at the beach has less environmental impact than everyone having a pool at home
Option 2 25m seaside pool and embankment protection	4	24	4	7	16	• Spoils the beautiful, natural coastline we are so lucky to have
Option 3 Embankment protection only (no pool)	3	16	10	7	19	• You can plant your way out of erosion – you cannot build your way out of erosion • The irony of putting a load of construction material on the coast, then needing to stop it washing into the sea … so building a concrete wall in front of it?? Short-vision and just putting a band aid on instead of solving the problem.

Appendix F – Email submissions

Email submission 1

Hello

After looking at the options, we like the 50m option
It has the larger cost and bigger footprint but also uses more area that is currently only good for walking on rocks. The wading pool and the entry to the 50m pool imitates a beach experience. The entry is a great idea for older or invalid users.
[redacted]

Email submission 2

Hi.

We have lived in Hallett Cove for 18 years.

The plans for the tidal pool look good but we have two strong concerns and we would like written reassurance that these will be addressed please.

- Wheelchair /Disability Access. We note that there will be a slope down to the pool and a slope into the pool itself for wheelchairs. Can it be ensured that the gradient of these is gentle enough to allow genuine access please? There are many examples where this is simply not the case (e.g. Oaklands station where the gradient is simply too steep). Our daughter has to use a wheelchair, but there are also many residents in Hallett Cove who are elderly and find steep slopes too difficult or dangerous. Certainly a small elevator to the pool as has been fitted outside the central station to the river in Adelaide would be ideal (and involve less excavation).
- Adequate Parking. This is already an issue at the beach on a sunny day as any local will tell you. If more people visit to access the pool this could very easily get out of hand.

I hope the above points (especially 1) are acted upon. As an aside we did submit concerns about disability access at the time the new play ground at the beach was erected and these were clearly not taken on board; while it looks pretty, the playground is simply not accessible for kids in wheelchairs and so our family have been denied the opportunity to use this facility.

Thank you.

[redacted]

Email submission 3

Dear Council,

re. the proposal of a seaside pool for Hallett Cove foreshore it is a definite No, No and No again from us. We are surrounded by beautiful beaches already.

Main reason being parking. We live in Arafura Court and have to reverse out of our garage. Difficult enough already during summer months.

Arafura Court is just not wide enough to provide parking on both sides.

No yellow markers either side of our driveway to restrict visitors from parking to close to the driveway.

And how about accessibility for emergency vehicles and rubbish trucks?

Re. funding of the project where is the money coming from? Higher council rates?

Kind regards
[redacted]

Email submission 4

Swimming pool

I wish to vote against the swimming pool reasons

PARKING

IF BUILT, THE ADDITION OF TOILETS, and change rooms, WILL SPOIL THE APPEARANCE OF A BEUTIFUL QUIT BEACH.

Rate payer [redacted]

Email submission 5

SUMMARY

If a swimming pool is constructed on Hallett Cove Beach it will create sea water turbulence and erosion of a beach which is already starved of sand.

When storms occur there will be extensive and irreparable damage to the beach, the pool walls will be undermined and the artificial cliff will be further eroded and will expose even more concrete and asbestos sheeting from the shacks that once lined that shore.

There will be continuing costs to the Marion Councils and State Governments for a succession of band aid repairs.

Hundreds of families have moved into the area as it was developed only to find that Hallett Cove was not a good swimming beach.

The erosional damage from the presence of an artificial protrusion such as a pool will make the beach even less attractive.

I suggest that the present and future moneys which would have been used for an on-beach pool should instead be invested in the Olympic pool at Oaklands Park. Build a canopy and heat in winter.

INTRODUCTION

I first visited Hallett Cove in 1958 when, as a First Year Geology Student at the University of Adelaide, we were taken there to see the very well exposed geology including the evidence of an ice age during Permian times (about 295 million years ago) when Australia was near the South Pole and then joined to Antarctica, along with India, Africa and South America forming a super - continent called Gondwana.

That geology has now been preserved for all to see in the Hallett Cove Conservation Park which was declared in 1976 after heroic efforts by many people led by Ms. Maud McBriar and Mrs. Jean Minards.

DISCUSSION

In 1958 the Hallett Cove Beach was covered in sand and flanked by sand dunes on which were built a line of shacks. Since then that beach has been starved of sand. The sand drifts northward along the coast carried by the northward moving coastal current.

The reduction of sand supply has been caused by the (protruding) construction of the boat launch facility at O'Sullivan's Beach, the (protruding) moorings at Port Stanvac, and the extensive coverage of land to the south by buildings and bitumen roads which stop most of the natural erosion of sand into the creeks and out to sea.

As a consequence the southern part of Hallett Cove Beach is now exposed rocks ,and only the northern part is covered by sand and cobbles.

There are two sources of rocks on the Beach-

the very big boulders and some of the rounded cobbles were dumped there when the Permian ice melted about 290 million years ago. These are held in the underlying glacial clay.

the round cobbles from the erosion of the cliffs to the south sit on top of the glacial clay and protect it from some erosion particularly during storms.

If a swimming pool is constructed on those rocks and clay the tyres and caterpillar tracks on the heavy equipment will leave ruts which will be the loci for erosion particularly during storms - which generally come from the south-west and west.

In addition, the storm waves will hit the western wall of the pool and surge back further scouring the beach.

On the southern side of the pool the waves will be concentrated in the corner between the wall and the cliff causing scouring beneath the wall and rapid erosion of the unconsolidated cliff. On the northern side of the pool the storm waves will scour around the wall and also hit and erode the cliff.

The effect of storm waves and hard pool walls will be severe erosion of the beach and the cliff, and damage to the walls. Any protection of the cliff with rip-rap boulders will also reflect storm waves and cause beach erosion.

The images of proposed models for the pool show hard rectangular boxes protruding out onto the beach, with walkways around the pool, but nowhere for families to relax and watch their children, no shade, and limited street parking-which parking spaces are often full now particularly on weekends in fine, warm weather.

CONCLUSION

The construction of such a protruding pool onto an open sand-starved beach will cause irreparable erosional damage to that southern part of the beach by storms.

It will cause a continuing financial maintenance and repair burden for a succession of Marion Councils and for a succession of South Australia Governments, and a continuing public embarrassment for those institutions. Healthy water and user safety are important and expensive issues beyond my expertise.

Yours sincerely

Email submission 6

Hi Mathew,

I am writing to you with regards to the proposed concept design for the Hallett Cove Sea-side pool as I won't be able to attend the community drop-in session tomorrow, the 29th of July.

I would like to clarify a few concerns before I submit the survey.

On the concept design paper I can't see any provision for:

- changerooms
- showers
- additional toilets
- place for lifesaving guards.

Without these facilities I can't envisage how the pools will operate properly and decently.

Because these are absent from the design, the cost of builing and maintenance are not included in the estimate and the costs will increase.

The design shows that the area is open (not fenced).

How the access to the pools are going to be regulated with regards to numbers of swimmers and time of the day? Does it mean that any number of people can just congregate at the pools and anyone can come and swim at night?

At present, there are a lot of big parties near the barbeque and playgroung coming for extended hours. On weekend you can't even come close to bbq and tables. Where are all other people will be sitting/resting before/after swimming in pools? On a slope?

With regards to the parking, I saw on social media a coucil document with the review of existing vacant parking spaces.

The problem is it's based on a feasibility study done in 2019.

I believe there is a significant increase in numbers of people/cars visiting the foreshore since then. Any day of the week there are lots of people and cars already, without pools in operation.

Do you really believe that increasing parking places by 7 at the foreshore and pushing others to park at the adjacent streets would solve the parking problem in the future and not create more problems, especially if we want to have a successful community asset?

Is the coucil planning to do another study with regards to parking?

Also, could you please provide me with a paper copy of the survey. I can pick it up from the council reception.

I would really appreciate if you coud clarify all these questions for me.

Kind regards,

[redacted]

Appendix G – Letter to residents

COMMUNITY CONSULTATION

Join the conversation

CITY OF MARION

Hallett Cove Sea-side pool and coastal protection - 14 July

Dear Resident,

The City of Marion has prepared two design options for a sea-side pool at Hallett Cove and wants to understand which the community prefers if any. Both options also include features to protect the embankment between the beach and the foreshore from coastal erosion. A third design option has been prepared which includes just embankment protection and no pool.

In August 2022 Council consulted with the community to understand the level of support for a sea-side pool at Hallett Cove. The results showed that the community was generally supportive. Some community members raised concerns about impacts on traffic, parking, the environment, visual amenity and costs.

Council has now prepared the three design options which seek to deliver positive outcomes whilst managing the impacts raised by community in the last consultation.

Design options

Option	Description
Option 1 50m sea-side pool and embankment protection	A 50m seaside pool adjacent Heron Way Reserve including stepped concrete benches and beach access pathways that also provide embankment protection against coastal erosion. Includes a children's wading pool with a natural rock floor.
Option 2 25m sea-side pool and embankment protection	A 25m seaside pool adjacent Heron Way Reserve including stepped concrete benches and beach access pathways that also provide embankment protection against coastal erosion. Includes a children's wading pool with a natural rock floor.
Option 3 Embankment protection only (no pool)	For the purposes of this consultation, concrete structure and beach access pathways adjacent to Heron Way have been used as an example of a solution that provides protection against coastal erosion. Other coastal management responses through this section will be considered as part of the “no pool” option which may including rock armouring, reinforcement and planting.

CITY OF MARION

Hallett Cove Sea-side pool and coastal protection - 14 July

These options have been developed as part of the sea-side pool project. Further planning work by council would be required to identify the best long-term response for managing the entire stretch of the embankment.

Learn more and have your say:

Visit **makingmarion.com.au/hallett-cove-sea-side-pool** or scan the QR code below to:

- View the Hallett Cove Sea-side Pool Concept Design Options and Report and;
- Complete an online survey by 5pm 11 August 2023

Community drop-in session:

Drop-in any time between **3pm and 5pm on Saturday 29 July 2023**, to the Boatshed Café (1a Heron Way, Hallett Cove) to view the concept designs, speak to the project team and have your say

No decision on funding or building a sea-side pool at Hallett Cove has been made by the City of Marion or State Government. The results of the consultation will be considered in future decision making about a pool and coastal protection works. If the pool were to proceed a funding partner would likely be required and further design and engagement would be undertaken with Kaurna representatives and other stakeholders.

We look forward to your input. If you have any questions, or you wish to complete a paper survey or require assistance, please call customer service on **8375 6600** or email: **communityengagement@marion.sa.gov.au**.

Kind regards,

City of Marion Community Engagement team

Concept Design
Summary of Options

Option 1 50m Sea-side Pool and Embankment Protection

Summary

A 50m seaside pool adjacent Heron Way Reserve including stepped concrete benches and beach access pathways that also provide embankment protection against coastal erosion. Includes a children's wading pool with a natural rock floor.

Advantages

- Public foreshore access enhanced
- 50m standard lap length preferred for consistency in endurance and fitness/health benefits (30% of sea-side pool users partake in lap swimming) and permits pool to be used for competitive events
- Storm-water outlet efficiently diverted for beach and water quality control
- Pool situated parallel to the contours of the beach
- Orientation and location allows pool to remain in use through broader range of surf conditions and protects ramped entry behind lap lane

Considerations

- Larger footprint
- Greater total project cost
- Channel to be excavated for deep water intake below rock platform
- Maintenance of 50m pool more involved, marginal increase relative to 25m pool
- Vision impaired users limited to using eastern most lap lane of pool as it is has a continuous edge. Lane is also most exposed to wave action, however it is largely protected by rock platform embankment

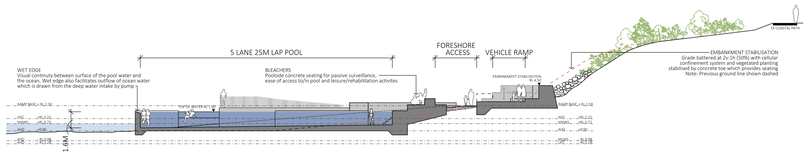

Cost

Capital : **$10.3M ex. GST**

Ongoing : **$200K pa.** (Mid range)

Option 2 25m Sea-side Pool and Embankment Protection

Summary

A 25m seaside pool adjacent Heron Way Reserve including stepped concrete benches and beach access pathways that also provide embankment protection against coastal erosion. Includes a children's wading pool with a natural rock floor.

Advantages

- Public foreshore access enhanced
- Reduced total project cost
- Smaller pool footprint
- Wet edge to end of ramp in the pool provides seating and frames views to Black Point
- Lap lane for vision impaired swimmers is protected, has good access and a continuous edge

Considerations

- Storm-water outlet indirectly diverted, at higher cost
- To permit access for maintenance vehicles, long axis of pool must be at 90 degrees to beach
- Channel to be excavated for deep water intake below rock platform
- 25m lap length less preferred by swimmers for fitness

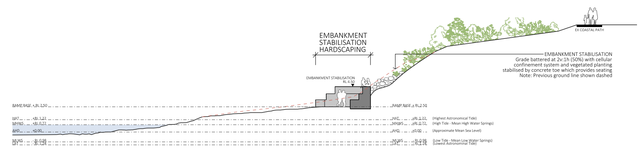

Cost

Capital : **$9M ex. GST**

Ongoing : **$180K pa.** (Mid range)

Option 3 Embankment Protection Only (No Pool)

Summary

For the purposes of this consultation, concrete structure and beach access pathways adjacent to Heron Way have been used as an example of a solution that provides protection against coastal erosion. Other coastal management responses through this section will be considered as part of the "no pool" option which may include rock armouring, reinforcement and planting.

Advantages

- Public foreshore access enhanced
- Reduced total project cost
- Reduced ongoing maintenance cost

Considerations

- Storm-water outlet unchanged, ie discharges onto the beach
- Coast more exposed to hazardous surf
- No lap or children's pool provided

Cost

Capital : **Up to $2.7M ex. GST**
