Plympton Park LATM Project Update September 2026

Dear Resident,

As part of the 2024–2025 Plympton Park Local Area Traffic Management (LATM) study, Council identified improvements for the Wattle Terrace and Arthur Street intersection to improve safety and better manage traffic movements through the local road network.

The original design included a new left-turn exit from Wattle Terrace onto Cross Road and removal of the northbound movement from Arthur Street into Wattle Terrace.

This is still being delivered, however as the project progressed through detailed design, Council identified that closing the northbound lane of Arthur Street would create access difficulties for waste collection vehicles servicing the area. We have revised the design to address this while maintaining the key traffic management objectives of the project.

What is changing?

The revised design will:

- Retain the existing left turn from Arthur Street into Wattle Terrace, maintaining local access and allowing waste collection vehicles and other essential services to continue servicing the area;
- Provide the new left-turn exit from Wattle Terrace onto Cross Road; and
- Install a raised median along Wattle Terrace to prevent vehicles travelling northbound through Arthur Street to access the new exit to access Cross Road.

The revised design maintains local access between Arthur Street and Wattle Terrace while continuing to discourage non-local traffic from using Arthur Street to access Cross Road. A plan showing the revised design is provided overleaf.

Following on from the completion of the State Governments Tram Grade Separation Project, Council anticipates construction will commence in early 2027, with further information to be provided once the works have been scheduled.

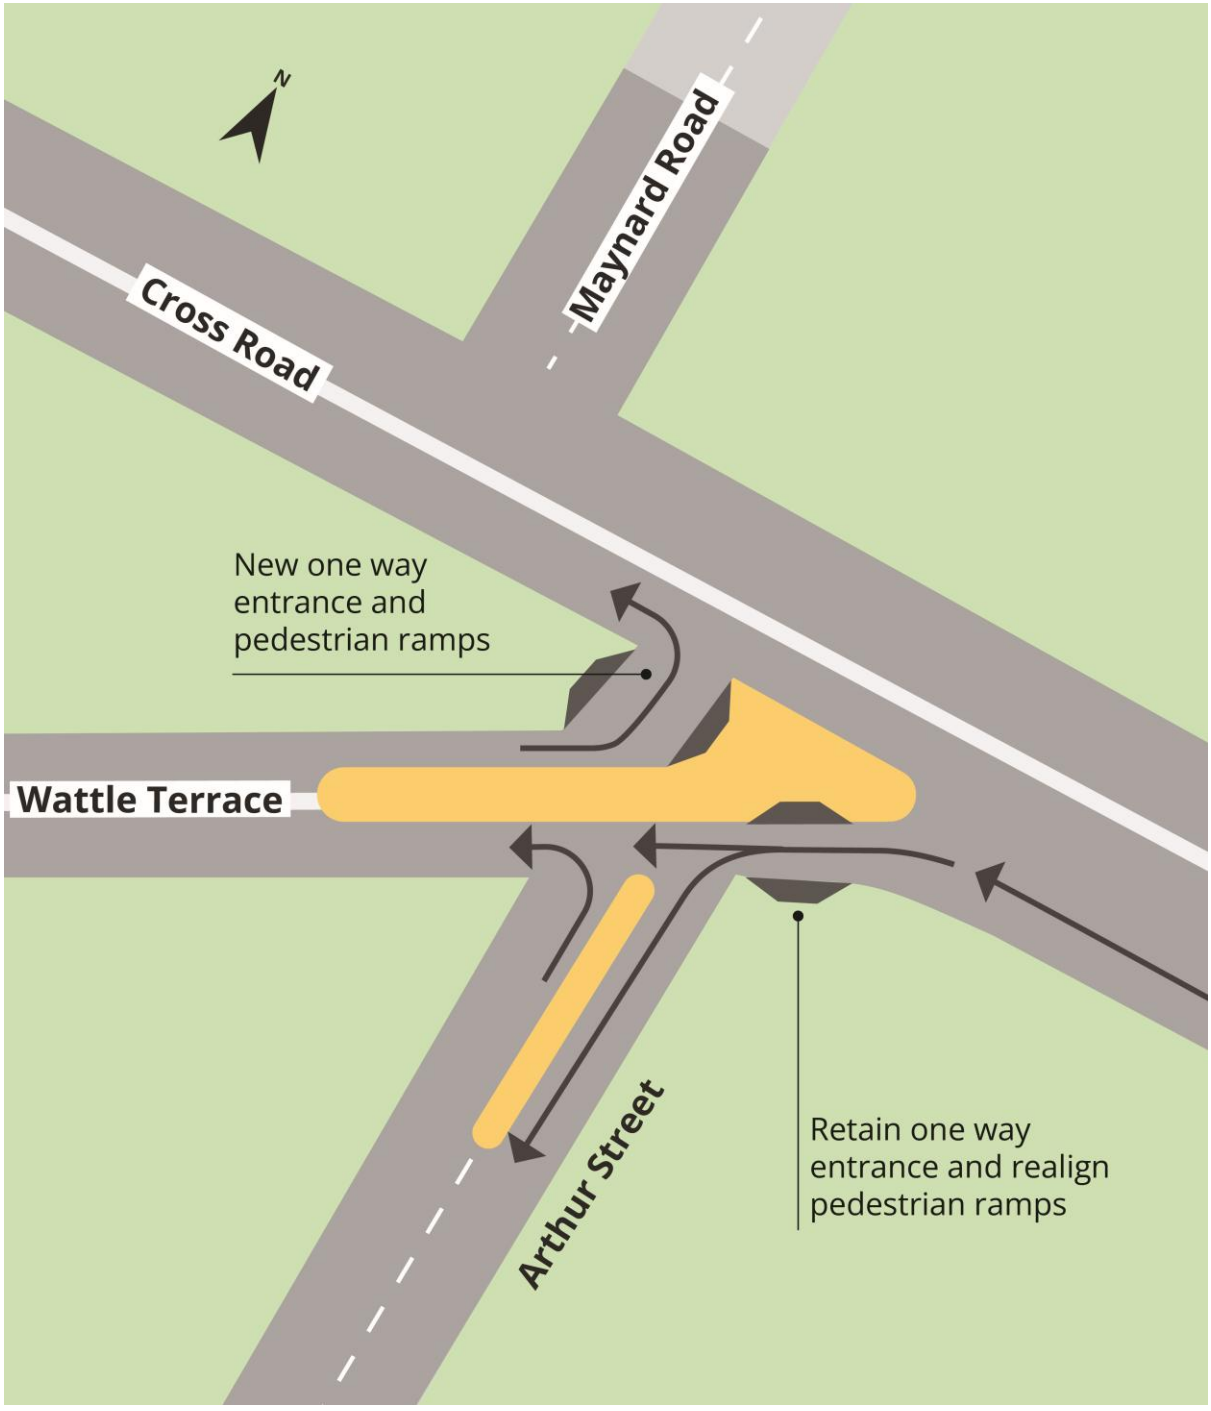

If you have any questions about the project, contact Council's Transport Team on **8375 6600** or email **transport@marion.sa.gov.au**
