Weedy Tree Removal

Frequently asked questions

Project timeframe / stages

Council plans to poison the Swamp Oak in 2026 and remove the tree during construction of the reserve upgrade.

Why is Council removing the trees?

Swamp Oaks are a declared species under the *Landscape South Australia Act 2019* due to their suckering nature and must be appropriately controlled.

What is the process for removing the trees?

The removal is a 2-stage process:

1. Trees will be drilled and filled with an appropriate herbicide by licenced operators.
2. Once the tree and root mass has died, the tree will be removed from site.

The herbicide application method is directly applied to the tree and therefore has no airborne impacts. The removal work will be undertaken with exclusion zones marked out with signage, bollards and flagging.

Will new trees and shrubs be planted in place of the Swamp Oaks?

Natural landscaping will be incorporated in the reserve upgrade under the existing native trees.

Will other trees or plants be removed?

No, we will be retaining all native trees already established at this site.
